

Sai Manish Varma Mudunuri

Data Analyst

manish@jobemails.net | (315) 261-9775 | USA | [LinkedIn](#)

Summary

Data analyst with 2+ years of experience skilled in SQL, Python, R, and BI tools like Power BI and Tableau. Proficient in data extraction, cleaning, transformation, and visualization, with expertise in ETL pipelines, statistical analysis, machine learning techniques, and data validation. Experienced in collaborating across teams using Agile methodologies to deliver actionable insights that enhance business performance through advanced analytics and interactive dashboards.

Technical Skills

- Languages & Tools:** SQL (Spark SQL, BigQuery), Python (NumPy, Pandas, SciPy), R
- Data Visualization & BI Tools:** Power BI, Tableau, Looker, Looker Studio
- Spreadsheet Tools:** Excel (Advanced formulas, Pivot Tables, Power Query), Google Sheets
- Databases & Data Warehousing:** Snowflake, AWS Redshift, AWS Athena, Azure SQL Database
- ETL & Data Pipelines:** AWS Glue, AWS Lambda, AWS S3, Azure Data Factory, Power Query, General ETL Tools
- Statistical & ML Techniques:** Time Series Analysis, Trend Analysis, Cohort Analysis, Regression Modeling, K-Means Clustering, Decision Trees, Correlation Analysis, Hypothesis Testing, Feature Engineering
- Business Intelligence Techniques:** DAX, Level of Detail (LOD) Expressions, KPI Scorecards, Drill-through Analysis
- Methodologies:** Agile, Requirement Gathering, Data Validation, A/B Testing, SDLC (Software Development Life Cycle)
- Productivity & Collaboration Tools:** Google Suite (Docs, Slides, Drive), Microsoft Office Suite (Excel, PowerPoint, Word)

Professional Experience

Data Analyst, Ameriprise Financial

10/2024 – Present | Remote, USA

- Worked on Portfolio Performance and Risk Analysis by collaborating with Portfolio Management, Risk, and IT teams using Agile methodology and conducting requirement gathering sessions to define portfolio benchmarks and client risk evaluation criteria.
- Built optimized SQL queries using window functions and common table expressions to extract data from AWS Redshift and Athena. Handled large-scale ETL for CSV and Parquet files sourced from internal and market data feeds.
- Performed time-series analysis and regression modeling to analyze portfolio returns and volatility. Identified 30% of underperforming portfolios and flagged key risk factors that helped advisors restructure investments with better risk-adjusted returns.
- Utilized Python with NumPy, Pandas, and SciPy to clean and transform portfolio data. Conducted correlation analysis and hypothesis testing to uncover hidden patterns and reduce risk model error rate by over 15%.
- Executed data validation and ETL workflows using AWS Glue, Lambda, and S3. Automated data pipelines that reduced manual intervention by 25% and ensured timely delivery of portfolio risk metrics to internal dashboards.
- Developed Power BI dashboards with features like interactive slicers, drill-through pages, and KPI scorecards. Used DAX to calculate rolling Sharpe ratios and Value-at-Risk which improved investment decision speed by nearly 20%.

Data Analyst, Zebronic

01/2022 – 07/2023 | Andhra Pradesh, India

- Collected and integrated customer purchase data by collaborating with Sales, Marketing, and IT teams using Agile methodology and requirement gathering sessions to improve targeted marketing strategies by 25%.
- Optimized SQL queries on Azure SQL Database for efficient extraction and transformation of millions of transactional records from ERP and e-commerce platforms and built automated ETL pipelines using Azure Data Factory.
- Performed exploratory data analysis using descriptive statistics and K-Means clustering to identify four key customer segments, which improved campaign targeting effectiveness by 18% and revealed seasonal purchase trends.
- Utilized Python libraries such as NumPy and Pandas for data cleaning, manipulation, and feature engineering, reducing data processing time by 30% and enabling faster iteration on segmentation models.
- Applied R's decision tree classification method to validate customer segments and predict segment membership, increasing prediction accuracy by 12% and supporting personalized marketing campaigns.
- Ensured data quality and consistency through automated validation and error handling within Azure Data Factory pipelines, maintaining high data integrity for reliable analysis and reporting.
- Developed interactive Tableau dashboards with dynamic filters and calculated fields, using Level of Detail expressions to provide granular insights on customer segments by region and product category, driving a 20% increase in marketing ROI.

Education

Master of Science - Applied Data Science

08/2023 – 05/2025

Clarkson University - Potsdam, New York, USA

Bachelor of Technology in Computer Science

11/2020 – 05/2023

Raghu Engineering College - Visakhapatnam, Andhra Pradesh, India

Certifications

[ESRI: Spatial Data Science: The New Frontier in Analytics](#)
