

Sai Nukalabanthi

Java Full Stack Developer

(940) 252 -6986 | saichandun16@gmail.com | Celina, TX | [LinkedIn](#)

SUMMARY

Results-driven Full Stack Developer with hands-on experience in designing and developing scalable web and backend applications using Java, Spring Boot, React.js, and MySQL. Skilled in building RESTful APIs, integrating third-party platforms, and optimizing application performance with tools like Docker, Jenkins, and Apache Kafka. Adept at working in cross-functional teams, managing end-to-end software development lifecycle, and delivering high-quality solutions under tight deadlines. Strong focus on clean code practices, problem-solving, and ensuring seamless user experience through continuous improvement and collaboration.

SKILLS

Programming Languages: Java, JavaScript, HTML5, CSS3, SQL, Python

Backend Frameworks: Spring Boot, Spring MVC, Hibernate, Node.js

Frontend Technologies: React.js, Angular, JSP, Bootstrap

Databases: MySQL, Oracle, MongoDB, PostgreSQL

APIs & Integration: RESTful APIs, Postman, Apache Camel, RestTemplate

DevOps & CI/CD: Jenkins, Docker, Git, GitHub, Maven

Messaging & Streaming: Apache Kafka, JMS

Testing & Monitoring: JUnit, Log4j, Selenium, SonarQube

EXPERIENCE

United Healthcare Group, USA | Full Stack Developer

July 2023 – Present

- Engineered secure web interfaces using Angular and React to display real-time patient data, integrating patient inputs directly into Meridian and URO-Chart EHR systems.
- Developed RESTful APIs with Java and Node.js to fetch, process, and update patient records and device data, enhancing backend performance and modularity.
- Implemented appointment scheduling, secure messaging, and allergy/medication updates with Core Java logic and SQL Server, improving patient self-service by 30%.
- Processed and visualized data from wearable and IoT devices using Python, MongoDB, and D3.js to support proactive care and clinical decision-making.
- Built responsive dashboards using React and D3.js, allowing healthcare providers to monitor patient vitals, trends, and alerts in real time.
- Utilized Docker and Kubernetes for deploying microservices, ensuring consistent environments and scalability across development and production.
- Automated CI/CD pipelines with Jenkins and Azure DevOps, enabling seamless code integration, testing, and HIPAA-compliant deployments in cloud environments.

Metlife, USA | Full Stack Developer

Jan 2023 – Jun 2023

- Developed responsive web interfaces using React.js, HTML5, and JavaScript, enhancing claim submission flow and real-time status tracking to reduce user drop-off by 30%.
- Engineered RESTful APIs with Spring Boot and integrated MySQL databases to enable secure and efficient handling of claim data, documents, and user details.
- Automated email and SMS workflows using SendGrid and Twilio APIs, resulting in a 50% reduction in customer support inquiries and increased satisfaction.
- Collaborated in an Agile environment using JIRA for sprint planning and GitHub for version control, while utilizing Jenkins for CI/CD and Postman for API testing.
- Implemented document verification, internal review dashboards, and status notification logic, streamlining claim approvals and reducing manual errors by 40%.

Hexaware Technologies, India | Software Developer

Jun 2020 – Dec 2021

- Customized core modules in Guidewire ClaimCenter using Java and SQL to streamline claim intake, assessment, and approval workflows, reducing claim turnaround by 35%.
- Integrated MuleSoft APIs with legacy insurance systems using a strategic wrapper/decorator approach, enabling plug-and-play scalability across digital channels.
- Built microservices using Java and Spring Boot for policy creation, premium processing, and notifications, deploying services via Docker and Kubernetes for high availability.
- Automated test suites with Selenium and ensured continuous integration using Jenkins and Azure DevOps, improving test coverage and deployment frequency by 40%.
- Collaborated using Git and JIRA to track feature progress, manage code changes, and resolve bugs, maintaining consistent sprint velocity in Agile delivery cycles.

Intex Technologies, India | Java Developer**May 2019 – Apr 2020**

- Developed backend services using Java (Spring Boot & MVC) to support a customer-facing mobile app and e-commerce integration, ensuring robust product and order management workflows.
- Created RESTful APIs using Spring Boot and RestTemplate to enable seamless communication between mobile app, inventory systems, and third-party e-commerce platforms like Amazon and Flipkart.
- Utilized MySQL and Hibernate to design and optimize database schemas for storing customer profiles, product catalogs, service tickets, and order histories.
- Integrated Apache Kafka and JMS to implement real-time event handling for service requests, order notifications, and inventory updates, improving operational responsiveness.
- Employed Docker for containerizing backend apps and Jenkins for CI/CD, reducing deployment time and ensuring reliable builds across environments.
- Implemented logging and monitoring with Log4j and error-handling mechanisms to improve system reliability, while using Postman and JUnit for rigorous testing of API endpoints.

EDUCATION**Masters in Management Information and Systems****May 2023***Lamar University, Beaumont, Texas, USA***Bachelor of Science in Computer science****May 2020***Sathyabama Institute of Science and Technology, Chennai, India*
