(Open to Relocate)

SUMMARY :

Results-oriented and detail-focused Data Analyst with over 3 years of experience in data integration, ETL processes, and predictive modeling using Python, SQL, and MATLAB. Proficient in utilizing cloud platforms like AWS and Azure, along with BI tools such as Tableau and Power BI, to design scalable data pipelines and produce impactful visualizations. Experienced in advanced machine learning techniques and statistical methods, including clustering, forecasting, and deep learning, to generate actionable insights and enhance model accuracy.

Skilled in collaborating with diverse teams to implement data-driven strategies that drive business growth, optimize operations, and influence key metrics for products and services. Capable of preparing reports, creating presentations, and ensuring adherence to data governance policies. Strong interpersonal skills enable effective communication of insights, improving decision-making and enhancing campaigns across various industries.

SKILLS :

Methodologies: SDLC, Agile/ Scrum, Waterfall, Project Management

Language: Python, SQL, MATLAB, R.

Python Libraries: Numpy, Pandas, Matplotlib, Scikit-Learn, Seaborn, TensorFlow, Keras, PySpark, Hadoop.

Data Analytics Skills: Data Collection, Data Cleaning, Data Mining, Data Visualization, Statistical Analysis, Data Warehousing, Data Wrangling, Exploratory Data Analysis, Database Management, Data Validation, Data Quality, Process Optimization

Data Analysis: Data Profiling, Data Mapping, Data Lineage, Predictive Modeling, Clustering, Forecasting, Feature Engineering, Statistical Analysis, Machine Learning, Tableau

Tools and others: AWS (EC2, S3, Lambda, Redshift), Azure (Event Hubs, Data Factory, Data Lake Storage), Tableau, Power BI, Alteryx, Google Data Studio, Jenkins, Hadoop, MongoDB, CI/CD.

Soft Skills: Problem-solving, Clear Communication, Critical thinking, Strategic Thinking, Team Support, Time Management,

PROFESSIONAL EXPERIENCE :

Data Analyst

Jul 2024 - Present

OPTUM

- Design and implement ETL pipelines to migrate and integrate data into Azure data warehouses, ensuring 99.9% accuracy. Utilize Big Data technologies to enhance data processing efficiency.
- Collaborate with data scientists to deploy machine learning models, improving scalability and aligning with business strategies.
- Establish data governance frameworks and ensure compliance with GDPR and HIPAA.
- Consolidate data from 10+ sources into a centralized repository, boosting data warehousing efficiency by 30% and reducing reporting time by 25%.
- Work with sales and finance teams to configure Salesforce workflows and NetSuite custom records, ensuring operational efficiency and data integrity.
- Automate data flows with Salesforce and NetSuite APIs, cutting manual entry by 40% and minimizing data inconsistencies by 30%, optimizing ETL tools.

Data Analyst

Jun 2021 - Jul 2022

INFOSYS

- Designed and developed high-performance data pipelines using Python and SQL, automating ETL processes and improving data processing efficiency by 40% with maintained precision.
- Optimized Big Data workflows using PySpark and Hadoop, increasing pipeline efficiency by 35% and ensuring timely delivery of analytics results.
- Conducted advanced statistical analyses and simulations using MATLAB, driving a 20% increase in user engagement and enabling data-driven business strategies for improved user satisfaction and ROI.
- Applied machine learning algorithms and statistical models with Scikit-Learn and TensorFlow, achieving a 20% boost in predictive accuracy and reducing error rates by 15%.
- Managed and optimized data warehousing solutions on AWS Redshift, improving query performance by 25% and ensuring effective storage and analysis of large-scale datasets.
- Performed EDA (Exploratory Data Analysis) to identify trends, patterns, and insights, supporting strategic decision-making and business growth.
- Maintained and monitored CI/CD pipelines with Jenkins, achieving 99.5% uptime for data analytics workflows and reducing deployment failures by 70%.
- Partnered with engineering teams to deploy Kubeflow pipelines, enabling reproducible data science experiments and accelerating predictive model development by 30%.

Data Analyst

Nov 2019 - Apr 2021

PFIZER

- Managed and manipulated large datasets using Python, performing routine data quality checks that improved data integrity by 30% and enhanced business decision-making efficiency by 25%.
- Conducted data pre-processing and feature engineering with Pandas and NumPy, preparing high-quality input data that boosted machine learning model performance and accuracy by 20%.
- Developed interactive dashboards and visualizations in Power BI, effectively communicating key data insights, forecasts, and predictions to stakeholders, which directly influenced strategic business decisions and operational enhancements.
- Designed advanced statistical visualizations and customized plots using Matplotlib and Seaborn, ensuring clarity and precision in presenting complex data trends and patterns.
- Architected and optimized MongoDB schemas, improving data storage efficiency by 30% and reducing query execution times by 40%, enabling faster and more sophisticated analysis of unstructured and semi-structured data.

Education

Syracuse University,

Master of Science in Information Systems - Data Science

Syracuse, NY

JNTU Hyderabad

Bachelor of Technology in Computer Engineering

Hyderabad, India
