Summary

- Data Analyst with 5+ years of experience delivering high-impact analytics solutions that generated \$41.5M+ in business value across healthcare and telecommunications industries.
- Expert in SQL, Python, and Tableau with proven ability to transform complex datasets into actionable insights for C-suite executives and stakeholders.
- Specialized in healthcare analytics and predictive modeling, with hands-on experience analyzing 10TB+ datasets and building enterprise-scale dashboards serving 100,000+ customers in the medical device industry.
- Track record of improving sales forecasting accuracy to 95%, reducing operational costs by 30%, and accelerating data processing by 80% through advanced analytics and machine learning.
- Proven experience in Oracle to Snowflake data migration, ETL pipeline development using Alteryx, and real-time dashboard creation that streamline business operations and drive strategic decision-making.

Technical Skills

Core Data Analysis:	SQL, Python, Tableau, Excel (Advanced Formulas, Pivot Tables, Lookups)
Data Platforms & Warehousing:	Snowflake, Oracle, MySQL, PostgreSQL, Amazon Redshift
Business Intelligence & Visualization:	Tableau, Power BI, Matplotlib, Seaborn
ETL & Cloud Tools:	Alteryx, AWS (S3, Lambda, Glue, Athena), SSIS, Azure Data Factory
Statistical Analysis & ML:	ARIMA Time Series, Predictive Modeling, Regression Analysis, Pandas, NumPy, Scikit-Learn

Education

- **M.S. Computer Science | Illinois Institute of Technology, Chicago, IL | Aug 2021 - May 2023 | GPA: 3.5/4.0**
Coursework: Advanced Database Organization, Machine Learning, Data Preparation & Analysis, Big Data Technologies
- **B.Tech. Electronics & Communication Engineering | Gitam University, India | Jun 2014 - Apr 2018 | GPA: 3.4/4.0**

Experience

Commercial Data Analyst - Medtronic, Nashville, TN (Remote)

Aug 2024 - Current

- Streamlined data processes for strategic negotiations with **GPOs and IDNs** across **3** medical device portfolios (**Cardio, Neuro, Medical Surgical**), facilitating **\$30+** million contract deals through physician mapping analytics and data quality processes using **Excel** and **Alteryx**.
- Built **8+** interlinked Tableau dashboards from scratch, monitoring **\$10+** million in daily revenue and reducing data lag by **80%** for real-time business intelligence.
- Led **Oracle to Snowflake** data migration project, improving query execution time by 80% and creating comprehensive data source referencing **33+ key metrics crucial** for cross-functional team analysis.
- Developed **ARIMA** forecasting models for **quarterly, monthly, and weekly** sales predictions achieving 95% accuracy, enabling teams to identify forecast variances and support strategic negotiations.
- Collaborated with cross-functional teams including **finance, marketing, and principal-level executives** in strategic reviews, providing data-driven insights for pricing strategies and revenue optimization.

Data Analyst - Blue Cross Blue Shield, Illinois

Aug 2023 - July 2024

- Analyzed **1.5 million** member records using **SQL** queries, identifying medication inconsistencies and potential risks through a clinical dashboard that reduced claim processing errors by **30%** and **saved \$11.5** million annually.
- Built scalable **Azure** ETL pipeline and **Power BI** dashboards, migrating 2TB of legacy member data to Snowflake in under 3 hours while analyzing 3TB+ claims data to visualize critical insurance KPIs.
- Improved executive comprehension by 30% among **50+ leaders** and drove 20% increase in data-driven operational decisions through comprehensive healthcare analytics dashboards.
- Implemented clustering algorithms and data modeling solutions using star schema and data vault methodologies, enabling risk assessment and member segmentation that delivered 25% better outcomes in premium pricing and policy underwriting.
- Collaborated with cross-functional insurance teams (actuarial, claims, underwriting) using Azure Data Factory, Databricks, and Python libraries, applying agile practices that accelerated project deliveries by **15%**.

Data Analyst - Accenture, India

Jul 2018 - Jan 2021

- Developed Stakeholder Mapping dashboard in Tableau managing data collection for **50,000+** Australian locations, optimizing **NBN Co's** strategic engagement with **RSPs** and government agencies while supporting **\$5M+** infrastructure investment decisions.
- Implemented automated data quality processes and advanced **SQL** data models using **AWS Lambda** functions, reducing data-related errors by **70%** and **achieving 40%** reduction in query execution time through **AWS Athena** optimization.

- Monitored network performance and created comprehensive data visualizations, proactively identifying high-demand areas and congestion issues to prevent service disruptions for **100,000+** customers while reducing team onboarding time by **20%**.

Data Analyst – KPMG, India

Sep 2017 - Jun 2018

- Assisted audit teams in testing financial controls for pharmaceutical clients using **Excel and SQL**, identifying revenue discrepancies worth **₹8 crores+ across 6 healthcare audits**
- Supported due diligence projects by analyzing financial data and creating **Excel** models for biotech M&A transactions, contributing to client advisory recommendations
- Performed **audit** procedures including accounts receivable confirmations and expense testing, improving team efficiency by **20%** through automated data validation scripts

Projects

YouTube Data Analysis

Tech Stack: AWS S3, AWS Glue, QuickSight, AWS Lambda, AWS Athena, AWS IAM, SQL, Python3

- Analyzed video metrics for **UK and Canada channels** using automated Lambda triggers and AWS Glue ETL jobs, processing **500K+** video records and generating insights into engagement patterns and content performance.
- Implemented end-to-end data pipeline achieving **60%** reduction in manual processing time and enabling real-time analytics dashboard for content strategy optimization.

Retail Analytics using Walmart Dataset

Tech Stack: SQL, Bash, AWS EC2, Docker, MySQL, Sqoop, Hive, and HDFS

- Developed a comprehensive retail analytics solution using Walmart dataset with 45 stores and 3 years of historical data, implementing time series forecasting models that achieved 92% accuracy in weekly sales predictions.
- Built a scalable data pipeline managing 421K+ transaction records and created an automated reporting system that reduced manual analysis time by 75%.

Real-Time Healthcare Claims Analytics

Tech Stack: Python, Streamlit, PostgreSQL, Pandas, Plotly

- Created interactive dashboard for real-time claims analysis processing 100K+ healthcare records, implementing anomaly detection algorithms that identified 15% more potentially fraudulent claims compared to traditional methods.
- Developed automated alert system reducing claim review time by 40% and improving fraud detection accuracy through machine learning classification models.
