SUMMARY

Full Stack Developer with 2+ years of experience building scalable, responsive web applications using modern frameworks, Skilled in state management, API development and integration, and cloud services including AWS. Demonstrated ability to enhance application performance, implement secure authentication, and deliver features in Agile environments. Strong collaborator with cross-functional teams, experienced in testing, CI/CD pipelines, and leveraging AI tools to improve development efficiency and user engagement.

WORK EXPERIENCE

Sports Excitement

Full Stack Developer Intern

New York, NY

Mar 2025 – July 2025

- Engineered dynamic, responsive web pages using Next.js, Tailwind CSS, and a mobile-first design approach, improving page load speed and accessibility.
- Built reusable React components and implemented Redux for centralized state management, reducing redundant API calls by 25%.
- Integrated Map box for real-time location tracking, enhancing user engagement with interactive mapping features.
- Designed and implemented authentication modules with secure login and role-based access control, leveraging Supabase for backend services.
- Created and optimized database schemas for scalability and efficient query performance.
- Developed and consumed RESTful APIs to enable seamless client-server communication and feature extensibility.
- Implemented Cloudflare for content delivery network (CDN) optimization, security, and performance enhancement.
- Wrote and executed unit tests to validate functionality, ensure code reliability, and reduce post-deployment defects.
- Collaborated effectively with cross-functional teams including UI/UX designers, frontend, and backend developers to deliver cohesive full-stack solutions, ensuring alignment on project goals and timely feature delivery.
- Collaborated in an Agile/Scrum environment, contributing to the MVP launch by delivering full-stack features ahead of schedule.

UNCC

Teaching Assistant

Jan 2025 – May 2025

- Mentored and supported 100+ undergraduate students in problem-solving, recursion, data structures, and algorithm design through weekly lab sessions and personalized one-on-one meetings, improving overall assignment completion rates.
- Facilitated debugging and coding best practices, enhancing students' logical thinking and programming skills.
- Evaluated and graded programming assignments, providing constructive feedback focused on improving coding style, efficiency, and algorithmic approach.
- Collaborated with instructors to develop comprehensive problem sets, practice exams, and review workshops to reinforce core computer science concepts and boost student success.
- Led live coding demonstrations and walkthroughs of complex algorithms (sorting, searching, recursion), translating theory into practical, real-world programming skills.

Accenture

Full Stack Developer

Bangalore, India

May 2022 – Dec 2023

- Developed custom web applications using JavaScript, React.js, HTML, CSS, and Node.js, streamlining client workflows and boosting operational efficiency.
- Built scalable middleware solutions with Node.js and Express, handling 10K+ API requests daily with 99.9% uptime, leveraging AWS Lambda and S3 for backend services.
- Implemented secure JWT-based authentication for user access and role management, aligning with industry data security standards.
- Integrated Razor-pay payment gateway to enable secure, seamless payment processing, improving transaction reliability and user experience.
- Deployed and maintained middleware on AWS EC2, optimizing load balancers and routing for high-traffic environments, monitored via CloudWatch.
- Integrated and optimized MySQL databases using Sequelize, improving query performance by 20% while managing over 75K records.
- Utilized AWS Sandbox for safe feature testing and authored comprehensive unit tests, reducing post-deployment defects by 25%.
- Diagnosed and resolved critical system issues, cutting downtime by 30% and ensuring continuous service for 200+ end-users.

PROJECTS

Web Cloner

Tech Stack: Figma, Next.js, Tailwind CSS, TypeScript, Fast API, Claude (Anthropic AI), Selenium, aiohttp, Python, Postman.

- Developed a full-stack web app using Next.js, Tailwind CSS, and Fast API, boosting responsiveness by 40% and integrating Claude AI to analyze and summarize content from 1,000+ web pages.
- Built a scalable scraping pipeline using Selenium, aiohttp, and asyncio to extract HTML and DOM content from user-provided URLs, reducing data retrieval time by 60%.
- Implemented CORS, Pydantic validation, and custom URL sanitization to enhance request security and reliability by over 90%.

Property Pulse Web Application

Tech Stack: Figma, Next.js 14, React, Tailwind CSS, MongoDB, Mongoose, Next AUTH, Google OAuth, Cloud nary, Vercel, Postman.

- Developed a full-stack property rental platform with Next.js 14, boosting user engagement by 20%, Implemented secure authentication via Google and Next AUTH, enhancing data protection and access control.
- Designed a responsive UI using Tailwind CSS, improving mobile usability by 35%, Optimized image handling with Cloud nary, reducing page load times by 40%.
- Enhanced search and location filtering through React Geocode and Map box for accurate recommendations, Deployed on Vercel.

SKILLS

Programming Languages: Python, JavaScript, TypeScript.

Web Development: HTML5, CSS, Tailwind CSS, React.js, Redux, Next.js, Node.js, Express.js, EmailJS, Django, Flask, Bootstrap, Webpack, ESLint.

Auth: OAuth, JWT.

ORMs: Prisma, Mongoose, Sequelize.

API Development: REST API, FastAPI.

Methodologies: Scrum, Kanban, Agile, SDLC.

Testing Frameworks: Junit, Selenium, Jest, unit test, Pytest.

UI Tools / Libraries: ShadCN UI, Bootstrap, Framer Motion, Canva.

AI Tools: Claude, Firebase Studio, Cursor, GitHub Copilot, ChatGPT.

Cloud / Databases: AWS (Lambda, S3, Redshift), Docker, Kubernetes, MySQL, MS SQL, PostgreSQL, MongoDB, Supabase, Firebase.

Tools: Kafka, Notion, Jira, Snowflake, CI/CD, Clerk, Cloudflare, Cloudinary, Vercel, Git, GitHub, VS Code, Vite, Postman, Prompt Engineering, MS Word, MS Excel.

AI & LLM Tools: Hands-on experience with Generative AI (GenAI) tools and frameworks including OpenAI (ChatGPT/GPT APIs), Hugging Face Transformers, and Lang Chain for building LLM-powered applications.

EDUCATION

University Of North Carolina at Charlotte

Charlotte, NC

Master of Science in information technology

CGPA: 3.73/4.0

Relevant Coursework: Network Based Application Development, Software System Design and Implementation, Human Centered Design, Operating Systems, Applied Databases, Software Development Projects, Distributed Systems.
