Professional Summary

Passion driven Software Development Engineer in test (SDET) with 2+ years of experience in UI and API automated testing, delivering quality solutions in fast paced agile environment at leading fintech and e-commerce unicorns. Currently pursuing MS in Computer Science to leverage my strong QA foundation and growing AI expertise in roles that bridge software quality with AI systems.

Education

Northeastern University, Boston, MA

Sep '24 – May '26

MS in Computer Science – Khoury College of Computer Science

GPA: 3.87/4

Courses: Natural Language Processing, Programming Design Paradigm, Algorithms, Database Management Systems, LLM

Work History

Cred, Bengaluru, India – Leading Fintech Unicorn

Mar '23 – May '24

Software Development Engineer in Test (UI Testing)

- Optimized test execution by configuring selenium grid 4 to orchestrate multiple Appium server instances, enabling concurrent cross-platform testing cutting a 2-hour test suite to 1 hour.
- Integrated Appium BDD framework with AWS DynamoDB via SDK/API enabling dynamic data driven test execution and environment management, increasing the test coverage by 25%
- Validated CRED-Axis bank credit card integration on sandbox platform by designing 400 test cases for performing end-to-end workflow testing through manual and test automation to ensure zero-defect user onboarding for 10,000+ daily active users
- Spearheaded mobile test automation strategy across Android/iOS platform developing regression suites, UI validations and integration test cases using Java, Appium and XCUITest framework resulting in a 65% reduction of manual effort
- Created Jira dashboards to track bugs, perform root cause analysis and bug triage, reducing defect resolution time and improving android/iOS production quality within 16 weeks
- Integrated automated test suite into CI/CD pipeline using GitHub Actions reducing production defects by 80% and accelerating feedback from days to minutes

PharmEasy, Bengaluru, India – Leading E-Commerce Unicorn

Jul '22 – Mar '23

Software Quality Assurance Engineer (UI Testing)

- Designed and implemented a custom event automation tool using Java and Appium to validate 30+ frontend triggers against ground truth, eliminating 10 hours of manual effort per bi-weekly release
- Engineered a Python based performance testing tool using MitmProxy to audit API compression, identifying optimization across 20+ APIs that led to 40% improvement in response time
- Worked closely with cross functional teams like developers, product managers and designers to triage, prioritize and ensure timely resolution of bugs and a holistic approach to software quality.
- Performed manual testing to validate app functionality, UI/UX behavior, network and API testing using Postman and Charles Web Proxy, identifying critical defects before feature release

Software Quality Assurance Engineer Intern (Backend Testing – REST APIs)

Jan '22 – Jun '22

- Implemented automation for the feature filters on search result page using Rest-Assured, achieved 90% of test coverage leading to the organization's first fully automated feature release and setting a benchmark for future releases
- Introduced a slack bot using python to track data sync and inconsistency issues across different systems, resulting in a reduction of 3 hours of manual debugging effort every day
- Integrated Rest-Assured BDD framework with Elasticsearch DB to enable real time data validation and deserialize JSON data into POJOs enabling end to end system validation

Technical Skills

Languages: Java | Python | C | C++ | R

Testing: Selenium | Appium | XCUITest | REST- Assured | Pytest | Junit | Charles Web Proxy | MitmProxy | TestRail | TestNG

Machine Learning and Data science: PyTorch | Pandas | NLTK | Scikit-learn | Keras | NumPy | Hugging face | Gemini-flash API

Backend and Databases: Flask | SQL | NoSQL | MongoDB | Linux | Redis | REST API | Elasticsearch | MySQL | Kafka

Frontend: HTML5 | CSS | JavaScript | React

Others: Git | Bitbucket | Postman | SDLC | Maven | Jira | Xcode | Jenkins | Unix | Android Studios | Confluence | GitHub Actions | Excel

Projects

AutoQuest: Automated Question-Answer Generator from Text Using NLP

Jan '25 – Apr '25

- Architected an question answer generation bot using a fine-tuned large language model (T5-small) for difficulty-controlled question generation and a RAG (Retrieval-Augmented Generation) framework for context-grounded answer generation

Image Processing Application

Oct '24 – Dec '24

- Desktop application built using Java 8, JUnit 4, Java Swing API to edit and photoshop images
- Showcases best practices using MVC, abstraction, and appropriate design patterns, with focus on code reuse and unit testing
