

PROFESSIONAL SUMMARY

- Over 10 years of IT experience as a Java Full Stack Developer with a focus on designing and developing scalable web applications using Java/J2EE and modern open-source technologies. Proven expertise in delivering end-to-end solutions across various domains.
- Skilled in all phases of the Software Development Life Cycle (SDLC), including requirements analysis, design, coding, testing, deployment, and maintenance. Consistently ensured adherence to project timelines and quality standards.
- Experienced in Agile (SCRUM), Waterfall, and Test-Driven Development (TDD) methodologies. Used tools like JIRA for sprint planning and JUnit for test-driven implementation, enhancing productivity and code reliability.
- Strong hands-on experience in Core Java concepts such as OOP, Collections, Multithreading, Exception Handling, Applets, and Regular Expressions. Designed and implemented reusable and maintainable Java modules following best practices.
- Proficient in Java/J2EE server-side technologies including JDBC, Servlets, JSP, EJB, Spring, Hibernate, JPA, JTA, JMS, JNDI, JSON, and RESTful/SOAP Web Services. Delivered robust and scalable applications that improved system performance.
- Developed and maintained dynamic front-end applications using Angular 16, React, NodeJS, Bootstrap, JavaScript, TypeScript, AJAX, JSON, XML, and jQuery. Ensured cross-browser compatibility and adherence to W3C standards.
- Built complex SQL queries, stored procedures, and triggers in Oracle and SQL Server environments. Optimized database performance and enhanced application responsiveness through effective indexing and tuning.
- Designed and implemented data access layers using Hibernate, EclipseLink, and iBATIS ORM frameworks. Integrated these layers with MVC frameworks such as Spring MVC, Struts, and JSF for a clean, modular architecture.
- Developed microservices architectures using Spring Boot and Micronaut. Utilized message brokers like Apache Kafka, RabbitMQ, IBM MQ, and AWS SQS to ensure reliable, asynchronous communication between distributed services.
- Hands-on experience with various application and web servers, including WebLogic, WebSphere, JBoss, GlassFish, Apache Tomcat, and Nginx. Ensured high availability and efficient load management in production environments.
- Applied DevOps principles to streamline CI/CD pipelines and release processes. Measured software delivery performance using DORA metrics to continuously improve deployment speed and reliability.
- Worked extensively with NoSQL databases such as MongoDB and Cassandra alongside relational data modeling. Enhanced data availability and scalability through optimized schema design.
- Managed project builds and dependencies using Ant and Maven, integrating automated CI/CD pipelines with Jenkins. Achieved consistent build success rates through structured automation and error monitoring.
- Proficient in SQL and PL/SQL development with extensive use of triggers, stored procedures, and cursors. Ensured data integrity and optimized performance through proper query optimization techniques.
- Developed Spark applications using Scala with functional programming paradigms. Ensured efficient, maintainable, and high-performance big data processing pipelines with seamless Java interoperability.
- Gained strong familiarity with cloud platforms such as AWS, Azure, and GCP. Deployed and managed cloud-based microservices and serverless applications to improve system scalability and reliability.
- Experienced in XML processing using JAXP and JAXB for schema binding. Utilized XML parsers for configuration management and data interchange across different systems.
- Skilled in version control systems such as Git, GitHub, SVN, and CVS for collaborative code management. Also experienced with Rational ClearCase and Microsoft TFS for enterprise version tracking.
- Hands-on experience with build and deployment automation using Maven and Gradle. Streamlined multi-environment deployments, reducing manual intervention and improving release consistency.
- Implemented logging and debugging using Log4j and Logback. Conducted root-cause analysis for production issues using structured logging and monitoring tools.
- Performed extensive unit and integration testing using JUnit, TestNG, Mockito, Cypress, Jasmine, Karma, Jest, and Selenium. Maintained high code quality through test automation and continuous feedback cycles.
- Developed Python scripts for parsing XML documents and database integration. Built lightweight web applications combining Python, HTML, and CSS for internal tools and automation.
- Integrated SonarQube into CI/CD pipelines for static code analysis. Ensured adherence to coding standards and maintained a consistent quality benchmark across all projects.
- Utilized Behavior-Driven Development (BDD) methodologies with Karate and Cucumber frameworks. Enhanced collaboration between QA, Dev, and Product teams by defining clear, testable acceptance criteria.
- Created and maintained secure RESTful APIs using Spring Boot and integrated authentication mechanisms with Spring Security and OAuth2. Ensured data protection and compliance with security best practices.
- Enhanced legacy systems by refactoring monolithic applications into modular microservices. Reduced deployment complexity and improved scalability through containerization and orchestration.
- Implemented asynchronous communication between services using Kafka topics and message queues. Optimized event-driven architecture to handle large-scale data streams efficiently.
- Collaborated closely with cross-functional teams to align software design with business goals. Participated in sprint planning, code reviews, and retrospectives to promote transparency and iterative improvement.

- Designed responsive front-end interfaces with dynamic state management using React and Redux. Improved application load times and user experience through component-based architecture.
- Ensured production stability through continuous monitoring and proactive issue resolution. Leveraged CI/CD pipelines, logging frameworks, and automated testing tools to maintain reliable deployments.

TECHNICAL SKILLS

Programming Languages	Java/J2EE, C/C++, SQL, PL/SQL
Java Technologies	Core Java 17, J2EE, JSP, Servlets, JDBC, Struts, Java Reflection, Java Persistence API (JPA), JSON, Web Services (RESTful & SOAP)
Web Technologies	HTML5, CSS3, XML, Spring Boot, Python, JavaScript, jQuery, Typescript, NodeJS, Angular 16.0, Vue.js, React, AJAX, SOAP, JSON, JSTL
Web/Application Servers	WebLogic, Apache Tomcat, WebSphere
IDE's	Eclipse, WebStorm, IntelliJ Idea, NetBeans, Microsoft Visual Studio
Databases	MySQL, PostgreSQL, Oracle, SQL Server, Cassandra, MongoDB
Cloud Computing	AWS, GCP, Azure
Other Tools	DORA, Spark, Scala, Apache Kafka, Terraform, Log4J, JUnit, TestNG, Maven, Gradle, Cypress, Jenkins, Jira, Git, GitHub, Kubernetes, SonarQube, RabbitMQ, Selenium
Frameworks	Spring Boot, Spring MVC, Hibernate
XML Technologies	XML, SAX, DOM, XSL, WSDL, SOAP
Operating Systems	Windows 7/8/10, UNIX/Linux

PROFESSIONAL EXPERIENCE

Costco: October 2022 – Current (Location: Issaquah, WA)

Sr. Java Full Stack Developer

Responsibilities:

- Actively contributed to the full software development life cycle within an Agile (Scrum) environment for retail applications. Participated in design, development, testing, and deployment to enhance store and online customer operations.
- Developed high-performance Single Page Applications (SPAs) following a Microservice-Oriented Architecture using Angular 17.0. Enabled seamless shopping experiences with integrations to Cassandra DB and MySQL for order and inventory data.
- Implemented advanced Angular features including directives, routing, validations, and Angular UI components to improve user interaction. Enhanced usability for store management and e-commerce customer portals.
- Used AngularCLI and TypeScript to create reusable controllers and components for product and membership dashboards. Optimized front-end performance through Angular Lazy Loading, ensuring faster page load times.
- Implemented comprehensive unit tests for Angular applications using Karma, Jasmine, and Jest. Strengthened code reliability and accelerated regression testing for frequent production releases.
- Developed a scalable order and inventory management platform using Spring Boot, Micronaut, and Angular. Enabled real-time tracking of product availability and order processing across warehouses.
- Built robust booking and delivery modules with Angular front-end and Spring Boot/Micronaut microservices. Integrated Apache Kafka for event-driven updates between store systems and online platforms.
- Created reactive user interfaces using RxJs, Angular, and WebSockets for live order status and delivery tracking. Delivered smooth real-time experiences for users on both desktop and mobile platforms.
- Enhanced customer engagement by implementing Angular animations and transitions in product catalogs and checkout flows. Created visually dynamic and intuitive interfaces for better shopping experiences.
- Utilized Angular's built-in AJAX HTTP Service with observables for dynamic updates to cart and inventory data. Improved responsiveness for users browsing or modifying cart items in real time.
- Demonstrated proficiency in Linux shell scripting and Python scripting to automate backend retail data operations. Developed service layers using Java/J2EE for efficient processing of customer and product data.
- Leveraged Python's libraries like NumPy, Pandas, and Scikit-learn for demand forecasting and product analytics. Improved inventory stocking efficiency through predictive modeling.
- Implemented Python-based microservices and AWS Lambda functions to manage lightweight pricing and membership services. Utilized Micronaut for building efficient serverless retail components.
- Integrated Node.js modules using NPM for seamless module management across the front-end build system. Utilized Grunt and Express for improving CI build speed and deployment consistency.

- Developed APIs using Express.js for product catalog and order workflows, providing robust backend services. Maintained an MVC structure to support scalable and maintainable retail applications.
- Implemented microservices architecture with Spring Boot and Micronaut, facilitating communication via REST APIs and Apache Kafka. Improved synchronization between order, billing, and fulfillment systems.
- Utilized JPA 2.1 and Hibernate for ORM operations across MySQL and Cassandra data sources. Optimized query performance for high-volume order processing and reporting systems.
- Integrated business modules using Spring Boot and Cassandra DB for real-time transactional data. Ensured fault tolerance and high availability for order processing pipelines.
- Embedded JMS within Spring Boot services using ActiveMQ for asynchronous event handling. Enhanced communication between retail systems for better inventory synchronization.
- Deployed Spring Boot-based microservices within Docker containers on AWS ECS. Improved scalability and simplified deployments for high-traffic retail environments.
- Managed containerized deployments using AWS Fargate for Java-based microservices. Reduced infrastructure overhead and achieved auto-scaling capabilities during sales events.
- Integrated AWS Fargate with CI/CD pipelines to automate deployments of retail microservices. Streamlined release cycles and reduced deployment turnaround time.
- Developed serverless applications using AWS Lambda with Java for background billing and loyalty services. Integrated DynamoDB for low-latency data access during checkout operations.
- Designed efficient data access patterns in DynamoDB for product and membership lookups. Ensured high throughput and minimal query latency for concurrent shoppers.
- Deployed front-end Angular applications through AWS S3, integrating with RESTful APIs for retail services. Configured CORS for secure cross-domain communication between systems.
- Developed and maintained Infrastructure as Code (IaC) using Terraform for multi-cloud deployments. Standardized infrastructure setup for staging, pre-production, and live environments.
- Implemented modular Terraform structures to simplify infrastructure reusability across retail microservices. Enabled fast replication of environments for testing and new regional rollouts.
- Integrated Terraform with Jenkins-based CI/CD pipelines to automate provisioning and updates. Utilized S3 and DynamoDB for secure remote state management.
- Created Splunk dashboards to monitor transaction logs, application latency, and service health across environments. Enabled proactive troubleshooting and improved operational visibility.
- Implemented SonarQube-based static code analysis integrated with CI/CD pipelines. Maintained consistent code quality, reduced vulnerabilities, and enforced secure development standards.

Environment: Java 17, Angular 16, Node.js, HTML5, CSS3 (SASS), Micronaut, Twitter Bootstrap, Kubernetes, ES6 JavaScript, GraphQL, OpenShift, Python, AJAX HTTP Service, Spark, Scala, Selenium, TypeScript, Spring Boot, JPA, PL/SQL, jQuery, OAuth 2.0, Apache Kafka, Active MQ, AWS, SonarQube, Cassandra DB, Terraform.

CVS: December 2019 – September 2022 (Location: Woonsocket, RI)

Sr. Java Full Stack Developer

Responsibilities:

- Developed complex user interfaces using React.js to deliver seamless and dynamic pharmacy management portals. Leveraged React's component-based structure and virtual DOM to ensure responsive and high-performing UIs.
- Utilized Redux for centralized state management, ensuring consistent data flow between prescription modules and patient dashboards. Implemented actions, reducers, and selectors to synchronize healthcare data in real time.
- Developed highly scalable real-time applications using RxJs and React, enhancing responsiveness for pharmacy order tracking and live updates. Optimized asynchronous data streams for smooth real-time interactions.
- Leveraged React Native to develop cross-platform mobile applications that improved patient accessibility to CVS services. Built unified user interfaces for iOS and Android using shared React logic.
- Employed React Hooks such as useState and useEffect to simplify state management in patient data components. This approach enhanced code clarity and streamlined component reusability.
- Integrated React applications with RESTful APIs using Axios for patient record retrieval and updates. Implemented proper error handling and loading indicators to improve user experience.
- Integrated React with Redux-Saga and Material-UI to enhance state management and interface consistency. Implemented React-DnD for intuitive drag-and-drop features in internal workflow tools.
- Designed and implemented client-side interfaces using React.js integrated with Redux-Promise middleware. Enabled seamless retrieval and display of healthcare and retail data through RESTful services.
- Developed Microservices using Spring Boot with Spring MVC to support modular healthcare application architecture. Each service exposed RESTful APIs for secure communication between billing, pharmacy, and customer systems.
- Utilized Spring Boot Actuator and Sleuth for performance monitoring and tracing across microservices. Enabled detailed logging and health checks to ensure application reliability.
- Built RESTful APIs with Spring Boot and integrated them with gRPC for optimized internal communication between microservices. Ensured data consistency and faster data exchange across distributed systems.

- Leveraged Java 1.8 features like parallel streams and lambda expressions to optimize prescription search operations. Enhanced performance of large-scale data retrieval from the backend.
- Implemented DAO design patterns using JPA-Hibernate for CRUD operations on pharmacy and customer data. Developed mapping files and persisted classes to streamline database interactions.
- Utilized OpenShift for deploying containerized Java applications, enabling consistent performance across development and production environments. Monitored application performance using Prometheus and Elasticsearch.
- Implemented reactive state management using RxJs observables for real-time prescription processing. This improved scalability and responsiveness in customer-facing portals.
- Developed backend integrations using Node.js for internal service communication and XML schema validations. Defined input/output XML documents for seamless web service interactions.
- Leveraged JMS for asynchronous exchange of prescription and billing events across distributed systems. Improved system reliability through event-driven architecture.
- Built Docker images and containers for microservices deployment, ensuring consistent environments and dependency management. Streamlined CI/CD workflows with container-based delivery pipelines.
- Worked extensively with Google Cloud Platform (GCP) services for hosting and scaling data-driven applications. Utilized Cloud Storage, BigQuery, and Dataflow for efficient data analytics and reporting.
- Leveraged GCP's Kubernetes Engine (GKE) to orchestrate containerized workloads for CVS internal systems. Ensured high availability, scalability, and security across environments.
- Designed and developed microservices deployed on Azure Kubernetes Service (AKS), enabling cloud-native scalability. Configured monitoring and security policies for containerized deployments.
- Implemented RabbitMQ for reliable message queuing between microservices handling order, billing, and notification events. Applied clustering and mirrored queues for fault tolerance and high availability.
- Utilized Jenkins for continuous integration and deployment of microservices pipelines. Integrated Maven and Gradle builds to ensure automated and reliable deployments.
- Automated infrastructure provisioning using Ansible playbooks, simplifying configuration management and deployment. Contributed to building CI/CD pipelines that improved release efficiency.
- Implemented Kubernetes ConfigMaps and Secrets for secure and centralized application configuration. Managed deployments with scalable and secure orchestration to ensure system stability.

Environment: Java 8, React.js, Redux, React Native, Spring, Spring Boot, Hibernate, HTML5, CSS3, Ansible, JavaScript, Microservices, Kubernetes, RabbitMQ, OpenShift, Node.js, Oracle DB, OAuth, ETL, JMS, XML, BDD, GCP, Docker, Maven, Gradle, EJB, log4j, JUnit, Cypress, Jenkins, RESTful, SQL.

MasterCard: February 2017 – November 2019 (Location: Purchase, NY)

Sr. Java Full Stack Developer

Responsibilities:

- Followed Agile software development practices, including paired programming, test-driven development, and daily Scrum meetings. Collaborated closely with cross-functional teams to enhance payment processing modules and ensure iterative delivery.
- Developed and implemented new feature code using Spring MVC and Hibernate to support real-time payment processing. Followed Agile principles for continuous integration and delivery of secure transaction components.
- Developed APIs to support Angular UI migration for customer payment portals. Designed XSDs to build and validate web service data used across MasterCard's transaction systems.
- Worked on front-end design and development using HTML5, CSS, JavaScript, Angular, and Vue.js. Enhanced customer-facing payment interfaces to improve accessibility and transaction efficiency.
- Utilized Vuex and Vuetify for managing complex UI state across financial dashboards. Built reusable and consistent UI components to ensure high performance and maintainability.
- Optimized application performance and accessibility using Vue.js best practices, focusing on real-time transaction visibility. Leveraged virtual DOM and reactivity to enhance user experience under high load.
- Mentored junior developers on secure and efficient Vue.js coding standards. Encouraged adoption of modular design patterns to maintain consistency across payment interface components.
- Integrated third-party APIs into Vue.js applications for secure exchange rate retrieval and fraud prevention services. Enabled dynamic visualization of real-time transaction data.
- Developed and deployed Spring Boot applications leveraging embedded servers like Tomcat and WebSphere. Streamlined deployment processes and reduced downtime for financial applications.
- Utilized Spring Boot's auto-configuration and starter dependencies to rapidly bootstrap payment gateway applications. Reduced manual configuration overhead and improved developer productivity.
- Configured XML-based Spring Security injections to enforce access control and secure sensitive transaction endpoints. Defined role-based permissions to safeguard internal APIs and data.

- Developed RESTful and SOAP web services using JAX-RS for seamless integration with partner banks. Ensured reliability and compliance in message transmission across payment networks.
- Implemented content-based message routing for XML web service requests to external banking systems. Processed and stored response messages securely within enterprise-grade databases.
- Utilized IBM MQ for asynchronous message delivery across distributed payment systems. Configured queue managers, channels, and routing rules to ensure reliable and ordered message flow.
- Integrated MongoDB for storing transaction metadata and audit logs. Optimized database indexing and querying strategies to achieve high throughput and low-latency performance.
- Architected and implemented ETL pipelines using Airflow and SQL to manage data extraction from various payment systems. Automated ETL scheduling to streamline daily reporting and fraud analysis.
- Leveraged Azure DevOps Pipelines for continuous integration and deployment of transaction microservices. Automated testing and monitoring improved overall platform stability.
- Implemented Azure Functions for serverless processing of transaction events, ensuring scalability and performance efficiency. Enhanced system responsiveness during peak transaction periods.
- Integrated Jaeger distributed tracing within Java microservices to monitor end-to-end payment flows. Improved visibility into transaction performance and latency across distributed services.
- Developed custom Grafana dashboards and plugins in Java for real-time monitoring of payment processing metrics. Enhanced observability and enabled proactive system optimization across the network.

Environment: Core Java, Vue.js, J2EE, JDK, Spring Boot, Spring MVC, Spring security, IBM MQ, Kafka, Hibernate, JSP, JavaScript, ETL, HTML5, CSS3, SQL, JUNIT, Cypress, Agile, RDBMS, Git, GitHub, Apache Tomcat, REST, RESTful, JVM, BDD, XML, Mongo-DB, JSON, SonarQube, Azure, Grafana, Jaeger, Jenkins, Chef.

Verizon: January 2016 – January 2017 (Location: Basking Ridge, NJ)

Java Developer

Responsibilities:

- Designed the front-end screens using JSP, JSTL, Servlets, HTML5, JavaScript, jQuery, and DOJO Struts Tiles. Built intuitive interfaces for managing telecom service requests and customer account workflows.
- Used Spring Framework extensively for dependency injection/Inversion of Control (IOC) to decouple modules. Integrated Controller, Service, and DAO layers for efficient processing of subscriber and billing data.
- Developed the presentation layer using Spring MVC and Spring Core, leveraging IOC and the Spring Application Context. Streamlined communication between the web and backend systems for real-time data display.
- Implemented the entire application using Core Java, Java Collections, and Spring MVC framework. Improved code modularity and optimized performance for large-scale telecom transaction processing.
- Designed and developed Microservices business components using Spring Boot. Enhanced scalability of service-oriented applications to support Verizon's growing customer base and high transaction volumes.
- Defined the storage purpose of collections in MongoDB for managing customer usage data and network configuration records. Optimized queries and indexing for faster data access in analytics workflows.
- Used log4j for detailed logging of network transactions and system activity. Managed code versions using SVN and automated build processes with Maven and Gradle integrated into Jenkins CI/CD pipelines.
- Implemented SOAP Web Services for internal systems to communicate securely across billing, provisioning, and service activation modules. Ensured interoperability between legacy and modern service platforms.
- Involved in consuming and producing SOAP-based Web Services to exchange subscriber data with external vendors. Strengthened data reliability and integration consistency across distributed systems.
- Implemented AWS CloudWatch for comprehensive monitoring and logging of AWS resources. Set up detailed alarms to ensure uptime and reliability of telecom application services hosted on AWS.
- Enabled proactive detection and resolution of network and infrastructure issues using AWS CloudWatch alarms and AWS Systems Manager. Improved system resilience and automated incident response handling.
- Extensively integrated AWS services with enterprise and web applications for managing large-scale customer operations. Improved agility and performance of telecom applications in the cloud environment.
- Leveraged AWS Elastic Beanstalk and AWS Lambda for seamless application deployment and backend automation. Reduced infrastructure overhead and improved application scalability.
- Migrated traditional on-premises systems managing subscriber and billing data to AWS Cloud. Utilized Amazon EC2, Elastic Load Balancing (ELB), and Amazon RDS for SQL Server to ensure high availability.
- Utilized Amazon S3 for secure and scalable object storage of call logs, reports, and configuration files. Integrated Amazon EFS for shared file access across distributed systems supporting multiple telecom applications.

Environment: J2EE, Java 8, Core Java, JSP, JSTL, Servlets, HTML 5, JavaScript, jQuery, Ajax, Bootstrap, CSS, Git, GitHub, Mongo DB, JAX - RS, log4j, SVN, Maven, Gradle, Jenkins, SOAP, AWS, Apache Kafka, Jasmine.

Inno Minds: May 2014 – November 2015 (Location: Pune, India)

Java Developer

Responsibilities:

- Collaborated closely with clients to gather and analyze requirements for enterprise web application enhancements, applying Agile methodologies to deliver incremental and high-quality software solutions. Maintained continuous communication with stakeholders to ensure alignment of business and technical goals.
- Utilized JIRA and Confluence for project documentation, sprint tracking, and task management. Ensured transparency and accountability across distributed teams by maintaining up-to-date project artifacts and progress logs.
- Actively participated in Agile ceremonies such as sprint planning, daily stand-ups, and retrospectives. Contributed to iterative releases by identifying process improvements and facilitating better team collaboration.
- Contributed to the development of scalable enterprise web applications using Java, JSP, Servlets, Struts, Spring MVC, and Hibernate. Enhanced modularity and maintainability by adhering to MVC and layered architecture principles.
- Leveraged Spring MVC framework to implement structured and reusable components. Streamlined application workflows and improved maintainability by separating business logic from presentation layers.
- Implemented the Hibernate Object-Relational Mapping (ORM) layer to handle database interactions efficiently. Simplified SQL operations and improved system performance through effective caching and lazy loading strategies.
- Assisted in database design and management using MySQL, PostgreSQL, and Oracle. Created optimized schemas and queries to ensure reliable and fast access to transactional data across multiple environments.
- Designed and optimized MySQL relational database schemas based on evolving project requirements. Improved query performance and data retrieval times through indexing and normalization techniques.
- Developed comprehensive unit tests using JUnit and TestNG frameworks to validate business logic and maintain robust code quality. Enhanced reliability through automated regression testing during build cycles.
- Utilized Selenium for automated functional testing to validate application workflows across browsers. Ensured continuous integration and deployment success by integrating Selenium test suites with Jenkins pipelines.

Environment: J2EE, Java 8, Core Java, JSTL, Servlets, Spring MVC, Hibernate, MySQL, PostgreSQL, Oracle, JUnit, TestNG, Selenium, Jenkins, JIRA, Confluence, Agile Methodologies.

EDUCATION

Bachelor of Technology in Computer Science Engineering

Vellore Institute of Technology, Vellore

2010-2014
