Work Experience

HUMANA INC, AZ USA – Software Development Engineer

| **October 2023 – Present**

- Developed a comprehensive Policy management system using Java and Spring Boot, enabling the automated tracking and renewal of health insurance policies, reducing manual errors by 25%.
- Designed intuitive and user-friendly layouts using HTML and CSS, ensuring a seamless experience for healthcare providers. This approach enhanced usability and reduced the learning curve for new users by 20%.
- Designed and developed a patient portal using C#.NET, ASP.NET MVC 5, and Entity Framework 6, enabling real-time tracking of medications, follow-ups, and care from physicians for over 10,000 patients, reducing patient readmission rates by 15%.
- Architected a microservices architecture using Spring Boot and REST APIs to manage vital patient data, including medication records, vital signs, and lab results, boosting care coordination by 30%.
- Conducted rigorous API testing with Postman to validate the performance and integrity of APIs managing real-time updates, including readmission risks and emergency room wait times, enhancing overall API reliability by 25%.
- Augmented data storage solutions utilizing Amazon RDS and DynamoDB, which improved data retrieval speeds by 25%, allowing clinicians to access critical patient information swiftly during consultations.
- Developed responsive web applications using ASP.NET 4.6, AJAX, and Kendo UI, allowing patients to easily access their medical history, follow-up appointments, and heart failure tracking, leading to a 25% improvement in patient engagement.
- Established the backend infrastructure for the real-time patient monitoring system using AWS App Runner and AWS Lambda, reducing the time to display patient vitals by 25%, enabling rapid responses to urgent patient needs and enhancing overall care efficiency.

CAPGEMINI, INDIA – Software Developer

| **April 2019 – July 2022**

- Architected and developed a Motor insurance claims automation system, leveraging Java, Spring Boot, and Hibernate, which reduced claims processing time by 22% and improved overall customer satisfaction.
- Led the transformation from a monolithic system to a microservices architecture, facilitating the real-time tracking of patient metrics like hospital-acquired infection rates and discharge readiness, increasing system scalability by 35%.
- Developed a responsive Angular frontend for the expense tracking model, ensuring seamless integration with REST APIs built with Spring Boot, which elevated the system's user interface performance and scalability by 30%.
- Crafted a scalable microservice architecture using Spring Boot, enabling seamless REST API interactions for expense tracking, strengthening system scalability and robustness by 30%.
- Integrated Spring Data JPA with MySQL and PostgreSQL, optimizing data access efficiency by 20% and reducing development time by 15%, streamlining data management processes for effective expense tracking.
- Enhanced application performance by diagnosing and resolving bottlenecks in React applications using Chrome DevTools, leading to a 30% improvement in overall performance and a smoother user experience.
- Facilitated seamless integration by collaborating with cross-functional teams to align frontend and backend components, leveraging Swagger for API documentation, improving communication, and reducing integration issues by 20%.
- Implemented AWS CloudWatch for real-time monitoring and logging of application performance and operational metrics, enhancing visibility into system health and reducing incident response times by 30%.
- Reinforced Spring Boot microservices on AWS Elastic Beanstalk, reducing average response times by 25% through targeted performance enhancements and effective caching strategies.

CAPGEMINI, INDIA – Jr. Java Developer

| **January 2018 – March 2019**

- Played a key role in the development of a secure document storage system for sensitive client data, utilizing Node.js for backend services and AWS S3 for cloud storage, which enhanced data accessibility and security for insurance clients.
- Leveraged Spring Boot Actuator for comprehensive monitoring and management of microservices, providing real-time insights into system health and performance metrics, leading to a 25% improvement in issue resolution.
- Streamlined frontend performance in React.js by implementing code-splitting and lazy loading, resulting in a 20% reduction in initial load times, enhancing user experience when accessing patient data.
- Implemented advanced caching strategies in React.js for Java APIs, cutting average page load times by 25%, which bolstered user engagement and increased customer satisfaction scores by 15%.
- Adopted Node.js for server-side rendering of the dashboard components, which improved both performance and SEO, leading to a 15% enhancement in page load times for users.
- Designed and optimized RESTful APIs with a focus on HTTP method efficiency, resulting in a 25% reduction in service downtime through rigorous testing protocols, enhancing overall system reliability.

Skills

Languages:	Java, HTML, CSS, JavaScript, C/C++, SQL
Frameworks/Libraries:	Spring Boot, ASP.NET, vb.NET, Spring MVC, Hibernate, ReactJS, React Redux, OAuth 2.0
Spring Frameworks:	Spring REST, Spring Web, Spring Cloud, Spring Batch, Spring Security, Spring Data JPA
J2EE Technologies:	Servlets, JSP, JPA, JSTL, JDBC, Microservices
Cloud:	AWS (EC2, Lambda, RDS, S3, Beanstalk, DynamoDB, IAM)
Methodologies:	SDLC, Agile/Scrum, Waterfall
Database:	Oracle, PostgreSQL, MongoDB
Tools:	Docker, Jenkins, JIRA, Postman, Git, GitHub, Junit, Postman, Mockito

Education

Master of Science in Computer Science | Clark University, USA

December 2024

Bachelor of Technology in Computer Science | Presidency University, India

May 2022
