

SAI SRINIDHI KARANAM

✉ saisirinidhik23@gmail.com 📞 +1 7044963115 📍 Bloomington, IN 🌐 LinkedIn 📁 Portfolio

Summary

Detail oriented Data Analyst with experience in data visualization, business intelligence, and statistical analysis. Skilled in SQL, Python, Power BI & Tableau to extract insights and build dashboards that guide strategy. Proven ability to automate pipelines, optimize processes, and support teams across cybersecurity and healthcare, with proficiency in AWS, GCP & advanced BI tools for end-to-end solutions.

Education

MS in Data Science, Indiana University, Bloomington

07/2023 – 05/2025

Course Work: Statistics, Applied Machine Learning, Elements of Artificial Intelligence, Big Data Management, Data Visualization, Applied Database Technologies, Data Science in Practice, Information Visualization, System Protocols and Security.

Skills

Programming Languages & Framework: Python, SQL (MySQL, PostgreSQL), R, C, C++, HTML, CSS, Scikit-Learn, Tensorflow, PyTorch, SAS

Data Science & Engineering: Data Cleaning, Data Analytics & Data Visualization (Excel, Python, Tableau, Power BI, Looker Studio), Business Intelligence (Dashboards, KPI tracking, Trend Analysis), Data Engineering (ETL, Airflow, AWS Glue, BigQuery), Machine Learning (Supervised & Unsupervised), Deep Learning (CNN, RNN, LSTM, NLP), LLMs, AI Agents, Crew AI, LangGraph.

Cloud Platforms: AWS (EC2, Athena, Glue, Lambda, S3, EFS, RDS), GCP (BigQuery, VPC, Dataflow), Databricks (MLflow, Delta Lake)

Developer Tools: Excel, Power BI (DAX, M Code), Tableau, Docker, Git, Apache Airflow, Kafka, Looker Studio, Snowflake, Jupyter, Streamlit

Professional Experience

Data Science Intern, Madhi.ai

06/2025 – Present

- Designed & deployed **AI agent** workflows using **SLMs**, Crew AI and Advanced **RAG** to deliver context aware, high-accuracy results.
- Built **ETL pipelines** to process PDFs, emails, CRM and other unstructured data, improving model performance.
- Created **dashboards** in Looker Studio to track KPIs, cost efficiency, and adoption metrics.
- Collaborated with engineers and product teams to fine tune AI agents, reducing latency and increasing reliability in production.

Data Analyst, Armorblox

02/2023 – 07/2023

- Developed an automated **data pipeline** using Snorkel and keyword-based functions, improving labeling efficiency and increasing model accuracy by 5%, reaching **92% accuracy**.
- Built and presented interactive dashboards using **Power BI** and **Python** to visualize attack types, frequency and trends, enabling data driven decision making and product enhancement prioritization.
- Analyzed large scale email data to detect fraud and sensitive information using **SQL**, Python and statistical methods, improving threat detection and identifying zero-day phishing attacks.
- Researched and validated multiple **machine learning** models to improve detection accuracy and reduced false positives by 12% through automated retraining, dataset updates, and model tuning.
- Collaborated with **cross-functional teams** (threat research, product and customer success) to operationalize insights, mitigate security threats and reduce incident response time.

AWS Cloud Data Engineer, Cognizant (Internship)

02/2022 – 08/2022

- Built ETL system to ingest and transform multi-source data, ensuring quality, consistency and reliability across the pipeline
- Developed and optimized scalable data workflows using **AWS** services including Glue, Athena, EC2, Redshift, Lambda, S3 and SageMaker reducing processing latency and enhancing overall system performance.
- Created interactive **dashboards** with Amazon QuickSight to visualize key metrics and deliver actionable insights.

Projects

- **Automated Sales Insights & Visualization using CrewAI**, Python, Crew AI, YAML, Data Visualization 📄

Built a **multi-agent AI** workflow to automate sales data analysis and reporting. Configured agents for data parsing, visualization, and report generation with autonomous exploration, producing consolidated reports with charts and insights for business intelligence.

- **Global Happiness ETL & Predictive Analytics Pipeline**, Python, SQL, GCP (Data Flow, BigQuery), ML (Scikit-learn), Looker Studio 📄

Developed an end-to-end **ETL** data pipeline to analyze and predict global happiness scores. Utilized **DataFlow** to ingest data into **BigQuery**, built a regression model to predict life ladder scores and visualized insights and model performance using **Looker Studio**

- **Global Trade Analytics & Visualization Dashboard**, Python, EDA, Data Visualization (Power BI) 📄

Analyzed global trade patterns using Python and EDA, cleaning and processing trade dataset. Designed an interactive **Power BI** dashboard to visualize trade flows, market trends and regional disparities.

- **Patient & Provider Insights Through Healthcare BI**, Tableau, Data Analysis, BI Reporting 📄

Developed an interactive **Tableau** dashboard to visualize patient & doctor analytics, medical conditions, billing trends, hospital resources, with filters to track medication effectiveness, admission types and insurance coverage distributions for improved decision making.

Certifications

Power BI Data Analyst Associate 📄

Microsoft Certified

SQL Associate 📄

DataCamp

Data Analysis & Engineering 📄

IBM
