Summary

A seasoned Data Scientist with a strong background in data science and engineering, specializing in Python, SQL, and ETL pipeline development. Proven ability to drive business improvements, including a 15% ROI increase and a 25% enhancement in decision-making efficiency. Experienced in deploying machine learning models, building interactive dashboards, and managing large datasets on cloud platforms like AWS and Azure. Eager to leverage expertise in data-driven marketing strategies to support Fusion92's mission of transforming marketing through analytics.

Skills

- **Data Engineering:** ETL pipelines, real-time streaming data pipelines (Airflow, Spark Streaming), automated monitoring, infrastructure redundancy design, large-scale dataset management
- **Cloud Platforms:** AWS (S3, RDS, EC2), Azure (Data Factory, Databricks), distributed clusters (Hadoop, Spark), Snowflake
- **AI and Machine Learning:** Retrieval-Augmented Generation (RAG), Random Forest, Logistic Regression, Clustering (K-Means), XGBoost, anomaly detection, predictive analytics
- **Business Intelligence & Visualization:** Tableau, Power BI, Dashboards, Chart.js, Reporting Automation, Data Storytelling, Data Analysis
- **Programming and Development:** Python (Pandas, NumPy, Scikit-learn), Flask, JavaScript (Vue.js, jQuery), SQL, PostgreSQL, User Interface Development
- **Soft Skills:** Agile (Scrum, Kanban), stakeholder communication, consensus building, deadline-oriented problem-solving, Project Management

Experience

Bristol Myers Squibb

Jun 2024 - Present

Data Scientist

USA

- Built and optimized predictive models for customer behavior analysis using Python (Pandas, Scikit-learn) and Spark, contributing to a 15% increase in campaign ROI.
- Developed robust ETL pipelines using Apache Airflow to automate workflows, ensuring data consistency and reliability on Linux servers.
- Designed and deployed interactive Tableau dashboards to deliver actionable insights, resulting in a 25% improvement in stakeholder decision-making efficiency.
- Engineered variable transformations and creative feature development to enhance machine learning models, improving accuracy by 20%.
- Designed and implemented big data pipelines using Databricks on Azure, optimizing performance for processing multi-terabyte datasets.
- Utilized AWS (S3, RDS, EC2) for scalable data storage and processing, optimizing cloud resource allocation to improve operational efficiency.
- Implemented advanced NLP techniques, including sentiment analysis and named entity recognition, to derive insights from unstructured text data by 20%.
- Conducted A/B testing and statistical analysis to evaluate the effectiveness of new features, resulting in a 20% increase in user engagement.

Citius Tech

Dec 2019 - Dec 2022

Data Scientist

India

- Designed and implemented data models and built SQL queries for forecasting, generating reports, and creating dashboards using Tableau, Power BI, and Google Analytics to provide actionable insights.
- Engineered big data pipelines for processing multi-terabyte datasets using Azure Data Factory, Databricks, and Polybase, ensuring seamless data flow into Azure SQL Data Warehouse.
- Applied clustering and anomaly detection techniques to identify fraudulent activities in transactional data, increasing fraud detection accuracy by 15%.
- Implemented Apache Spark Streaming pipelines for real-time data ingestion and processing, ensuring low-latency delivery for critical business operations.
- Designed geospatial data visualizations to analyze market trends, enabling stakeholders to make location-based decisions with 90% accuracy.
- Migrated on-premises data warehouses to cloud-based solutions (AWS Redshift, Azure SQL Data Warehouse), reducing operational costs by 30%.
- Developed advanced data visualization reports using SSRS, Power BI, Python, and Business Objects XI (BOXI) to drive decision-making processes.

Education

University of Cincinnati

Master of Science, Information Technology
