

SAI VINAY

Louisville, KY

+19807775227 saivinay760@gmail.com <https://www.linkedin.com/in/sai-vinay-gade-148a60181/>

SUMMARY

Experienced Data Engineer with over 4 years of expertise in cloud development and data engineering on MS Azure, AWS, and GCP. Demonstrated skills in designing scalable ETL pipelines, data migration, and ensuring data quality. Key contributions include developing data flows/pipelines, automating data management tasks, and integrating data between multiple systems. Aims to leverage a rich background in data visualization, cloud resource management, and analytical capabilities to enhance data processes and data-driven decision-making.

SKILLS

- **Programming Languages:** SQL, C, Python, Scala, PowerShell, R
- **Cloud Services:** AWS (S3, EC2, RDS, API Gateway, CloudWatch), Azure (Administration, Data Lake, Databricks, Data Factory), GCP
- **ETL Tools:** Azure Data Factory, Data Bricks, Azure Synapse Analytics, Azure Synapse, Parquet Files
- **Version Control:** Git, Github
- **Databases:** MySQL, ADL, Azure Databricks, Azure Cosmos DB, Microsoft SQL, Oracle SQL, SQL Serverless
- **Operating System:** MacOS, Windows 8, Windows 10, Windows 2008/2012
- **Data Visualization:** Power BI, Tableau, Looker
- **Data Security:** Data Decryption, Data Encryption
- **File Systems:** Delta Lake Files
- **Cloud Engineering:** Azure ADLS, Azure Pipelines, Azure Spark Notebooks
- **Integration:** REST API, Data Vault 2.0
- **Data Analysis & Modeling:** Statistical Analysis, Predictive Modeling, Data Aggregation, Data Cleaning, Data Wrangling, Feature Engineering, Hypothesis Testing
- **Data Analytics Tools:** Pandas, NumPy, Scikit-learn, Matplotlib, Seaborn, Jupyter Notebooks
- **Business Intelligence:** Data Profiling, Data Reporting, Dashboard Development, Ad-Hoc Analysis, KPI Analysis, Trend Analysis, Data Interpretation
- **Data Warehousing:** OLAP, OLTP, Star Schema, Snowflake Schema, Data Lake, Data Mart.

Work Experience

General Motors

Data Engineer

March 2024 - Present | Louisville,

- Designed and implemented scalable ETL pipelines using Azure Data Factory and Azure Databricks.
- Developed data integration workflows to ingest data from various sources into Azure Synapse Analytics.
- Implemented data encryption and decryption techniques to ensure data security in the data platforms.
- Integrated data between systems using Azure ADLS and Parquet files, ensuring data integrity and availability.
- Leveraged Azure Cloud resources Azure Data Lake Storage Gen2, Azure Data Factory, and Azure Data warehouse to build a centralized cross-functional data analytics platform.
- Managed data security and governance by leveraging Google Cloud IAM, Cloud KMS, and Cloud Audit Logs to ensure compliance and data protection.
- Developed Azure Synapse and Databricks notebooks to process files stored in Azure Data Lake Storage using PySpark.
- Implemented CI/CD pipelines with Azure DevOps and Azure Pipelines, streamlining development processes.
- Migrated data sources in alignment with business objectives, ensuring data integrity.
- Built custom ETL pipelines using Python and SQL for diverse data formats.
- Optimized data storage and retrieval strategies, reducing query times.
- Implemented CI/CD workflows for Azure Data Factory (ADF), securing credentials with Azure Key Vault, and deploying production-ready ADF resources via Azure pipeline releases.
- Developed solutions to proactively monitor ADF pipeline performance and resolve bottlenecks.
- Created Azure Logic Apps for monitoring and automated administration tasks.

- Developed and optimized data pipelines using Google Cloud Dataflow, BigQuery, and Cloud Storage for efficient ETL processing and analytics.
- Implemented real-time data streaming solutions with Google Cloud Pub/Sub and Dataflow, enabling real-time data processing and analysis.
- Implemented monitoring solutions for Azure SQL Database, including automated scaling.
- Wrote complex SQL queries and efficient dynamic SQL for generating stored procedures, triggers, functions, indexes, and views.
- Collaborated with data scientists to deploy machine learning models into production.
- Automated data quality checks and validation processes using PySpark and Airflow.
- Created interactive dashboards and reports in Power BI for business stakeholders.
- Designed the Data Warehouse and created Fact and Dimension tables with Star Schema and Snowflake Schema.
- Ensured database referential integrity using normalization and key constraints.
- Designed and optimized data pipelines using AWS Glue, Lambda, and Redshift, improving ETL processes and data accessibility.
- Implemented real-time data streaming with Amazon Kinesis and Lambda, enabling efficient data processing and analysis.
- Ensured data security and compliance by leveraging AWS KMS and IAM, while optimizing storage costs on S3 and Redshift.
- Utilized Databricks Delta Lake to create versioned Parquet files with transaction logs and audit histories.
- Developed end-to-end data pipelines on AWS (Amazon S3, Glue, Redshift) and GCP (BigQuery, Dataflow) for data integration and processing.
- Designed scalable data warehouse solutions on AWS Redshift and Google BigQuery, optimizing performance for data analytics.

Techies Infotech

Azure Data Engineer

Aug 2020 - Jul 2022 | Bengaluru, India

- Actively participated in client and stakeholder meetings as a senior BI developer and helped the Architect design technical solutions for business requirements of end users.
- Developed and orchestrated ADF pipeline activities for parallel and sequential data load using parameters and variables.
- Performed Power BI Desktop Data modeling, which cleans, transforms, and merges data from multiple sources.
- Involved in creating Filters, quick filters, table calculations, calculated measures, and parameters in Power BI.
- Documented analysis, coding, and testing activities, ensuring meticulous project tracking and traceability.
- Designed and implemented ETL solutions using Azure Data Factory and SSIS/ADF, focusing on performance tuning.
- Integrated CRM and marketing tools for enhanced analytics, leveraging AWS Redshift and S3 for scalable data warehousing solutions.
- Enhanced BI capabilities with Looker and Tableau, enabling stakeholders to gain actionable insights.
- Developed Python-based applications using Flask and Django for robust and scalable solutions.
- Automated data management tasks, optimizing delivery mechanisms for scalability.
- Maintained data pipelines with Hadoop, Spark, Kafka, and Flink.
- Enhanced BI capabilities using Looker and Tableau for actionable insights.

Techies Infotech

SQL Developer

Jul 2019 - Jul 2020 Bengaluru, India

- Optimized SQL queries and stored procedures for improved database performance.
- Conducted data analysis and visualization using Pandas, NumPy, and Matplotlib.
- Integrated SQL databases with Python applications for seamless data exchange.
- Provided technical support for SQL databases and Python applications.
- Migrated data from on-premises databases to Azure SQL DB.
- Created dynamic SQL queries and database objects for complex data manipulation.
- Performed ETL operations using Data Factory and Databricks, loading data into Azure SQL DW.

Education

Lindsey Wilson College

2023

Master of Professional Studies in Computer/ Information Technology and Management.

Sri Satya Sai University of Technology & Medical Sciences

2021

Bachelor of Science in Computer Sciences
