PROFESSIONAL SUMMARY

- 5+ years of professional experience as a Java Full Stack developer in analysis, design, developing, deploying, and maintaining Distributed Enterprise applications.
 - Expertise in developing Multi-tier Enterprise Level web Applications involving J2EE technologies like Servlets, JSF, Spring, Spring Boot, Struts, JDBC, Hibernate, JPA, JNDI, JMS, JSP, EJB along with XML, HTML5, CSS3, JavaScript, JSON, jQuery, Node.js, AJAX and Shell Script.
 - Expertise in Object Oriented Programming (OOP) Concurrency and Core Java Technologies like Multi-Threading, Exception Handling Mechanisms and Memory Management.
 - Expertise in developing Web Services such as REST, RESTful, and SOAP for commercial software applications. Well experienced in implementing Object Relational Mapping (ORM) framework including Spring AOP.
 - Experienced in deployment and configuration of Application Servers such as Apache Tomcat, WebSphere, and WebLogic. XML, Flat File, and Excel data transformation to MySQL Database as part of ETL Processing.
 - Experienced in message-oriented middleware technology such as Java Message Service (JMS).
 - Expertise in implementing various design patterns like Model View Controller, Decorator, Factory Pattern, Session Facade, Singleton, Front Controller, Service Locator, DAO, and DTO.
 - Involved in writing Java API for Amazon Lambda to manage some of the AWS services.
 - Experienced in build tools such as Git, Maven, Gradle, and Shell Script for automation and integration.
 - Highly skilled in using major RDBMS concepts such as Oracle 12C/11g/10g, SQL Server 12.0/11.0 and My SQL. Experience in developing Microservices using Spring-Boot.
 - Experienced in MS SQL Server for developing database to create its objects like functions, triggers, views, tables, ER modeling, DB normalization, RDBMS Design, SQL, PL/SQL, procedures, cursors and stored procedures packages.
 - Optimized React applications with **code-splitting, lazy loading, and reusable components** to enhance UI performance and scalability.
 - Experience in Agile, Scrum, Water-Fall methodologies.
 - Expertise in database modeling and development using No SQL Database such as MongoDB and Cassandra. Experienced in developing UML diagrams like Use Case Diagrams, Class diagrams, Sequence Diagrams.
 - Implemented **responsive, mobile-first designs** ensuring cross-browser compatibility and accessibility (WCAG/ARIA standards).
 - Collaborated with designers using **Figma/Adobe XD** to translate wireframes into pixel-perfect, user-friendly interfaces.
 - Experienced in version control systems like GIT, Tortoise SVN, Visual Source Safe and Clear Case. Worked on continuous integration tool like Jenkins.
 - Experience in working with different operating systems Windows, Linux, and UNIX.
 - Experienced with TDD in using various unit-testing framework such as JUnit, Mockito, ANT(Build) and Log4j (Logging Utility) Tools. Expertise in Code Reviews, Bug fixes and Unit & System testing, troubleshooting production incidents/issues.
 - Supported various projects and worked closely with Off-shore Teams.
 - Efficient team member with excellent work/time management skills, ability of quickly adapting to new technologies work environments and ability to work under strict deadlines.
-

TECHNICAL SKILLS

- **Programming Languages:** C, C++, Java 11, JavaScript
 - **Databases:** Oracle 12C, 11g, 10g, MySQL, MSSQL Server 2012, 2014, MongoDB
 - **J2EE Technologies:** Servlets, JSP, JSF, EJB, JDBC
 - **Web Technologies:** HTML5, CSS3, XML, JSON, JavaScript, jQuery, Bootstrap, React JS
 - **Application Frameworks:** Hibernate, Spring 5, Struts 2.0, Spring Boot 2.2
 - **Web Application Servers:** Apache Tomcat 8, WebLogic 10.3, WebSphere 27.0/8.0, JBoss
 - **Version Control:** GitHub, Tortoise SVN
 - **CI/CD & DevOps:** Jenkins, Maven, Gradle, Git, GitHub, SVN
 - **APIs & Microservices:** RESTful API design, Microservices architecture, GraphQL (basic)
 - **Cloud Platforms:** AWS (EC2, S3, Lambda, API Gateway, ECS, Cloud Foundry), Azure (basic), GCP (basic)
 - **Databases:** Oracle, MySQL, PostgreSQL, MongoDB, Cassandra
-

DXC

Feb 2024 - Present

Java Full Stack Developer

Conway, AR

Description:

As a Full Stack java developer, there were various roles and responsibilities primarily out of which included engaging into project design architecture, finalizing and preparing data base schemas, deciding the best practices and following the industrial approved software design patterns and least to say - training/onboarding new recruits.

- Designed and developed **RESTful APIs and microservices** using **Spring Boot, Spring MVC, JAX-RS**, and integrated them with identity services and customer event APIs.
- Developed and deployed applications on **AWS cloud services** including **Route 53, CloudFront, WAF, EC2, Lambda, S3, IAM, KMS, CloudWatch, SNS, SQS, DynamoDB, and ElasticSearch**.
- Implemented **Infrastructure as Code (IaC)** using **Terraform and AWS CloudFormation** for automated environment provisioning.
- Built **scalable microservice-based architecture** with service-to-service communication, deployed in **AWS (EC2, S3, Cloud Foundry)** with enabled versioning, security, and cloud-native features.
- Implemented **front-end components** using **Angular, React.js, Node.js, HTML5, CSS3, Bootstrap, AJAX, and JSON**, delivering responsive and user-friendly web applications.
- Performed **CRUD operations** and optimized queries on **MongoDB and Oracle 11g**, including stored procedures, triggers, and schema design.
- Developed **data processing pipelines** integrating **Kafka** for distributed messaging and ensured smooth asynchronous communication with **JMS** in WebSphere.
- Automated builds and deployments using **Maven, NPM, and CI/CD pipelines**, deployed in **WebSphere Application Server**, and managed code versions using **SVN/Git**.
- Ensured application performance, scalability, and reliability through **TDD, unit testing (JUnit), and debugging RESTful services**, with additional integration testing across modules.
- Collaborated in **Agile/Scrum** environment, contributing to design architecture, database schema preparation, API security, best practices, and onboarding new recruits
- Implemented **API authentication and authorization mechanisms** with **OAuth2 and JWT**, ensuring secure communication across microservices.
- Practiced **BDD/TDD** using **JUnit, Mockito, and Cypress** for unit and integration testing in Agile/CI/CD environments.
- Conducted **root cause analysis and performance tuning** for production issues, improving response times and reducing downtime.
- Coordinated with **cross-functional teams** (front-end, architects, and business analysts) to deliver seamless integration and high-quality releases.

Environment: Java 1.8, J2EE, Spring Framework 4.0, Hibernate, AJAX, Oracle 11g, Web Services, AWS, Agile, REST, XML, SOA, WebSphere, JavaScript, Angular, NodeJS, Bootstrap, jQuery, JBOSS, JUnit, Grunt, GitHub, SQL, JMS, HTML5, JSP, CSS3, MVC, Maven and SVN

CSC
Java Full Stack Developer

Mar 2023 – Jan 2024
NEW JERSEY USA

Description:

As a Full Stack java developer, my job role here was to work upon creating RESTful APIs that could communicate efficiently with other cross platform web services. We implemented micro services on secure HTTPs web infrastructure and deployed our projects Amazon Web Services(AWS) platform leveraging its EC2 and S3 bucket services.

- Designed and developed RESTful APIs and microservices using Spring Boot, Spring MVC, JAX-RS (Jersey), and deployed them in AWS (EC2, S3) for scalable, cloud-hosted applications.
- Built UI components using Angular, JSP, JSTL, HTML5, CSS3, JavaScript, jQuery, and AJAX, creating responsive and reusable front-end modules.
- Implemented Angular services, controllers, and custom directives to streamline code reuse and improve user experience.
- Utilized Java 8 features (lambdas, streams, functional programming) along with core concepts (multithreading, collections, concurrency, file I/O).
- Applied design patterns such as Singleton, DAO, Factory, and MVC to improve maintainability and scalability.
- Developed persistence layer using Hibernate/JPA with Oracle and MongoDB for handling large datasets and distributed data management.
- Integrated ActiveMQ and JMS for asynchronous messaging and event-driven communication across microservices.
- Used Spring Cloud for distributed tracing and service discovery, improving reliability of microservices.
- Automated build, testing, and deployments with Maven, Jenkins, Git, and CI/CD pipelines, ensuring seamless releases.
- Developed and integrated **payment processing modules** supporting **ACH, Wire Transfers, and SWIFT** protocols for secure and efficient transaction handling.
- Implemented **real-time payment solutions (RTP)** using Spring Boot microservices with low-latency design for high-volume transactions.
- Developed unit, integration, and UI tests using JUnit, Selenium, Protractor, TestNG, and Cucumber, following TDD principles.
- Implemented logging and monitoring with Log4j and performed production support, debugging, and optimization of Java APIs.
- Collaborated in an Agile/Scrum environment using JIRA for sprint planning, issue tracking, and cross-team coordination.

Environment: Agile, HTML, CSS, JavaScript, jQuery, AJAX and Angular, XML, DAO, POJO, JPA, Java8, Springs (IOC, AOP, JDBC) Frameworks, Spring Boot, Microservices, JSP, Hibernate Framework, AWS, RESTful Web services, SOAP, Maven, WebSphere Application Server, Mongo DB, NoSql, Log4j, Jenkins, JIRA, Selenium Web Drivers, Protractor, GIT, Socket Programming.

HSBC
Java Full Stack Developer

April 2021 – Dec 2022
Bangalore India

Description:

As a Full Stack java developer, my job role here was to take care of user stories received from our onshore counterparts and make sure they were delivered right on time. Within span of 4 months, after my internship, I had trained other interns too.

- Developed **RESTful APIs and microservices** using **Spring Boot, Spring MVC, and JAX-RS**, ensuring scalability and high availability.
- Built responsive **front-end applications** with **AngularJS, React.js, Bootstrap, JSP, HTML5, CSS3, JavaScript, and AJAX**, enhancing user experience.

- Designed and documented **API specifications** including JSON data formats and **API versioning strategies**.
- Implemented **microservices architecture** and integrated with **React.js** for seamless front-end and back-end communication.
- Leveraged **AWS Elastic Load Balancing and Lambda** for scalable, serverless application deployment.
- Designed and mapped **database entities** using **Spring JPA with Oracle DB**, ensuring efficient persistence and query optimization.
- Implemented **logging and debugging** with **Log4j**, enabling better monitoring and issue resolution.
- Conducted **unit testing and integration testing** with **JUnit and Mockito**, and pre-tested APIs using **Postman**.
- Contributed to **banking applications** by building **RESTful APIs** for payment systems, including **ACH and SWIFT-based transactions**.
- Participated in **JAD sessions** with business analysts and clients, providing demos and ensuring requirements alignment.
- Delivered **production support and root cause analysis**, resolving issues quickly and improving system stability.
- Performed **code reviews** and enforced coding standards, best practices, and maintainable documentation.
- Mentored junior developers and trained new interns, contributing to team productivity and knowledge sharing.

Environment: Java 1.7, Backbone.JS, Spring Boot, AWS, Spring Web MVC, Spring REST, Spring JPA, IBM Rational Application Developer (RAD) Eclipse, Apache Tomcat, Twitter Bootstrap, IBM Clear case, IBM Clear Quest, UML, XML, XHTML, HTML5, CSS3, ReactJS, XSL, Oracle, SQL Developer, Log4

XEROX
Junior full stack developer

Feb 2020 – April 2021
Bangalore India

Description:

As a **Junior Full Stack Developer**, I contributed to the design, development, and testing of enterprise applications while gaining hands-on experience with both front-end and back-end technologies. I worked closely with senior developers to implement business requirements, debug issues, and deliver high-quality software components across the full development lifecycle. My responsibilities included building RESTful APIs, integrating databases, and supporting CI/CD practices in an Agile team environment.

Responsibilities:

- Involved in analysis, specification, design, and implementation and testing of **Software Development Life Cycle**.
- Inserted **Dependency Injections** between components using **Spring (IoC) concept**.
- Widely used Java Technologies like, **Java 1.7, J2EE**, Core Java concepts like Exception Handling, Spring framework, DAO, JUnit using Mockito framework.
- Used **HTTP** methods extensively to retrieve the data from the **Rest API** and used that data to update the page dynamically
- Built application using Spring MVC architecture and integrated backend using Hibernate and Spring frameworks.
- Extensively involved in writing Object relational mapping code using hibernate, developed Hibernate mapping files for configuring Hibernate POJOs for relational mapping.
- Used JMS for reliable and asynchronous exchange of essential information such as payment status report.
- Configured Hibernate with **Spring ORM** as part of Spring and Hibernate Integration for best results.
- Used **Spring MVC** as Web module, involved in design, development of new Action classes to interact with business logic and Used **Hibernate** as **ORM** to map Java classes to data base tables.
- Wrote database queries using **SQL and PL/SQL** for accessing, manipulating and updating **Oracle database**.
- Dealt with **Jenkins** for Continuous Integration and Continuous Deployment (**CI/CD**).
- Used **GIT** for Repository and controlling the code without any conflicts.
- Used **JIRA** for project management. Epics, tasks and subtasks are created to track the progress.

Environment: Java 1.7, Spring, IOC, AOP, MVC, REST, Hibernate, JMS, Jenkins, GIT, Jira, Agile, Windows.
