skothapally11@gmail.com
+1 (475)-414-9884

OBJECTIVE:

Over 5+ years of experience as a **Business Intelligence Developer** delivering scalable reporting and analytics solutions with a strong focus on **Power BI, DAX, Power Query, and SQL/PLSQL**. Skilled in integrating **ERP systems data (SAP Financials & Procurement, Oracle DB)** into BI dashboards for **Accounts Payable, Accounts Receivable, General Ledger, and Procure-to-Pay reporting**. Hands-on expertise in **data modeling, ETL workflows, and data validation**, with a proven ability to translate complex business requirements into interactive dashboards that drive financial and operational decision-making. Experienced in **Power BI Service administration** (workspaces, RLS, refresh schedules, deployment pipelines) and in collaborating with Finance, SCM, and business stakeholders to ensure compliance, accuracy, and performance.

PROFESSIONAL SUMMARY:

- 5+ years of experience as a Business Intelligence Developer delivering scalable BI solutions, with a **strong focus on Power BI** for enterprise reporting, data modeling, and self-service analytics, alongside tools like Tableau, Alteryx, and Snowflake.
- Experience at **American Express** supporting financial dashboards (Credit Cards & Payments).
- Hands-on experience working with SAP-based financial data and integrating SAP datasets into Alteryx workflows for downstream analytics and reporting.
- Worked extensively on automating **F&A process reporting (P2P, R2R, O2C)** using **Alteryx, Tableau, and Power BI** dashboards.
- Strong background in **documenting financial process flows, supporting BRD creation**, and collaborating with finance teams for end-to-end analytics enablement.
- Exposure to **UiPath for process automation, including invoice extraction** and approvals in procure-to-pay cycle (preferred but optional based on real experience).
- Data handling in **regulatory reporting**-related dashboards and metrics (if applicable).
- Proficient in transforming raw datasets into actionable insights by designing **dynamic dashboards, KPIs, and reports** that support data-driven decision-making across departments.
- Deep expertise in **Power BI report development**, including building dashboards, **managing Power BI datasets**, and publishing reports to the Power BI Service.
- Skilled in **DAX calculations, Power Query (M language)**, and implementing **Row-Level Security (RLS)** to control data visibility by user roles.
- Performed **data profiling, data mapping, and SQL-based validations** to support high-quality reporting.
- Worked on **ETL workflows** and automated pipelines ensuring data quality, consistency, and alignment with compliance standards.
- Strong expertise in writing **complex SQL queries, stored procedures**, and optimizing data models using **Star and Snowflake schemas** to ensure efficient query performance.
- Experienced in **ETL processes** using **Alteryx and Tableau Prep**, including data cleansing, transformation, aggregation, and automation of data pipelines.
- Adept at integrating data from various sources including **cloud platforms (AWS, Azure), APIs, flat files**, and on-premise databases to support real-time analytics.
- Hands-on knowledge of **Python (Pandas, NumPy, Matplotlib)** for scripting, data preprocessing, and generating visualizations outside BI tools when needed.
- Track record of automating manual reporting tasks, enhancing dashboard performance, and proactively identifying areas for **analytics process improvements**.
- Developed and customized **QlikView** dashboards and reports, including data modeling, scripting, and visualization for performance monitoring
- SSRS report design, maintenance, and migration to Power BI on-prem environments.

TECHNICAL SKILLS:

Business Intelligence Tools	Power BI (Desktop, Service, Gateway, DAX, Power Query, Paginated Reports), Tableau (Desktop, Server, Prep), Alteryx, SSRS, Looker, QlikView, Looker (basic), QlikView (basic), SSRS, Excel (Power Pivot, Power Query), Google Data Studio
Data Visualization & Reporting	Dashboards, KPI reports, Drill-down/Drill-through, Storytelling with Data, Executive Scorecards, Advanced charting techniques, Dashboard performance tuning
ETL & Data Integration	Alteryx, Tableau Prep, Talend, Informatica, Azure Data Factory, AWS Glue, SSIS, dbt, Apache Nifi, SAP Integration (via Alteryx and SQL-based extracts)
Data Warehousing & Modeling	Snowflake, Amazon Redshift, Google BigQuery, Azure Synapse Analytics, SQL Server, Oracle, DB2 Star & Snowflake Schemas, Slowly Changing Dimensions (SCD), Fact and Dimension Tables, OLAP/OLTP, Data Marts, Kimball Methodology
Databases & Query Languages	SQL (advanced), PL/SQL, T-SQL, NoSQL (MongoDB basics), PostgreSQL, MySQL, SQLite
Programming & Scripting	Python (Pandas, NumPy, Matplotlib, Seaborn), R (basic), Bash/Shell scripting, VBA (Excel automation), DAX, Power Query (M Language)
Cloud & DevOps Tools	AWS (S3, Redshift, Athena, Lambda), Azure (Blob Storage, Synapse, Data Lake), GCP (BigQuery, Dataflow) Git, GitHub, GitLab, CI/CD (Azure DevOps, GitHub Actions), Docker (basic), Jenkins (basic)
Data Governance & Security	Data Governance Frameworks, Metadata Management (Collibra/Alation). Row-Level Security (RLS), Data Quality checks, Data Lineage Tracking, Access Management, Compliance Reporting, BRD Documentation, Process Flow Diagrams (Finance & Accounting)
Big Data & Streaming (Basics)	Apache Kafka (basics), Spark (PySpark – basic), Hive, Hadoop (basic familiarity)
Project Management & Collaboration	Agile/Scrum, Jira, Confluence, Asana, Trello, Miro, MS Teams, Slack
Other Tools	Microsoft Excel (Advanced Functions, Power Query, VBA), Visio, Lucidchart, Swagger (API testing), Postman, ServiceNow (Ticketing), Figma (Wireframes/Mockups), UiPath (basic exposure to process automation workflows in F&A domain)

PROFESSIONAL EXPERIENCE:

Client: Deloitte

Dallas, TX

Role: Sr Business Intelligence Developer

Dec 2023 – Till Date

Description: Worked on enterprise-level BI initiatives to build scalable reporting and visualization solutions for Sales, Marketing, and Finance departments. Developed and maintained KPI dashboards for executive stakeholders, automating reporting processes and ensuring data availability through robust data pipelines. Played a key role in cross-functional Agile teams to deliver insights from Snowflake-based cloud data warehouses.

Responsibilities:

- Owned the end-to-end delivery of **ERP-based BI** dashboards, integrating data from **SAP** Financials, Procurement, and **Oracle SQL databases** to support **AP, AR, GL**, and Procure-to-Pay reporting.
- Developed and published **Power BI** dashboards with optimized data models, **DAX** measures, and Power Query (M) transformations to meet complex ERP reporting needs.
- Collaborated with Finance and SCM stakeholders to translate **Oracle/SAP ERP** data structures and business logic into actionable KPIs and dashboards.

- Partnered with **Oracle DBAs** and **ERP** functional teams to validate data mappings, optimize queries, and ensure report accuracy.
- Configured **Power BI** Service: scheduled refreshes, deployment pipelines, row-level security, and workspace governance.
- Applied **UI/UX** best practices to build user-friendly dashboards with drill-throughs, slicers, bookmarks, and tooltips, improving adoption across Finance teams.
- Ensured regulatory compliance and data governance by validating **ERP** financial datasets and implementing access controls.
- Automated reporting pipelines, reducing manual effort by 20+ hours per week and improving refresh performance by 40% through **SQL** and **Power BI** optimizations.
- Supported and maintained legacy SSRS reports while transitioning them into Power BI dashboards for long-term modernization.

Environment: Power BI (Desktop & Service, DAX, Gateway), Oracle SQL databases Tableau Desktop & Server, Power BI, Snowflake, Alteryx, Python (Pandas), SQL Server, Jira, Asana, AWS S3, Excel, Git

Client: J.P.Morgan Chase

Role: Business Intelligence Developer

Phoenix, AZ

Sep 2022 – Dec 2023

Description: Led the development of analytics dashboards for dealer performance and sales pipeline visibility. Worked closely with the Lead-to-Cash and Customer Experience teams to deliver actionable dashboards in Tableau, pulling data from Snowflake and applying complex business logic through SQL, Python, and Alteryx workflows. Supported ongoing maintenance and optimization of Tableau content and Tableau Server governance.

Responsibilities:

- Collaborated with **business analysts and stakeholders** to gather reporting requirements and translate them into functional BI solutions.
- Analyzed and visualized **financial KPIs across the Order-to-Cash (O2C)** pipeline using Alteryx and Tableau, enabling deeper insight into billing, collections, and dispute trends.
- Performed **SAP financial data extraction and transformation via Alteryx**, integrating with Snowflake for self-service dashboards.
- Designed and implemented a **Dealer Performance Dashboard** in Tableau to measure and compare T-Mobile dealer KPIs across regions.
- Developed an interactive **Lead-to-Cash Opportunity Dashboard**, enabling teams to monitor pipeline health and conversion stages.
- Built engaging visualizations in Tableau aligned with business goals and UX best practices.
- Retrieved data from **Snowflake Data Warehouse**, joining multiple tables to prepare accurate datasets for reporting.
- Crafted and optimized **advanced SQL queries** for extracting and validating large volumes of structured data.
- Revised and enhanced legacy dashboards to meet evolving user needs and improve usability.
- Performed ongoing monitoring of dashboards and scheduled extracts to ensure data freshness and report accuracy.
- Designed and automated **data transformation workflows in Alteryx**, improving data readiness and reducing manual prep time.
- Utilized **Python (Pandas)** for additional data shaping, filtering, and custom visualization outside Tableau.
- Delivered production support for BI assets, resolving issues related to performance, data mismatches, or layout inconsistencies.
- Contributed architectural input for **improving data pipelines** and aligning with enterprise data warehouse strategy.
- Enabled seamless navigation using **Dashboard Actions** for filtering and URL redirects between summary and detail pages.

- Developed comprehensive documentation for all dashboards and reports, including technical specs and data flow diagrams.
- Created a **centralized master dashboard** to link subject-specific views through dynamic action-based navigation.
- Implemented hierarchical filters and **dynamic sets and groups** for flexible user interaction.
- Used **Context Filters** to improve dashboard response time and optimize queries behind visuals.
- Managed **Tableau Server tasks** including user setup, group permissions, content deployment, and extract refresh management.
- Set up and enforced access controls, workbook-level permissions, and project-level security within Tableau Server.
- Facilitated **daily stand-ups and sprint meetings** as part of Agile practices, helping track deliverables and remove blockers.
- Coordinated and supported **User Acceptance Testing (UAT)**, including the preparation and execution of test cases.
- Authored and maintained test plans defining strategy, testing scope, and resource responsibilities.
- Acted as a liaison between onshore and offshore teams, ensuring smooth communication, support, and deliverable tracking.

Environment: Tableau Desktop & Server, Snowflake, Alteryx, Python (Pandas, NumPy), SQL, Redshift (Read Access), Confluence, Jira, Excel, AWS

Client : DXC Technologies

Role: Data Engineer

Bangalore, India.

Dec 2020 – Jun 2022

Description: Involved in the end-to-end development of BI and data warehousing solutions for internal and external stakeholders. Focused on SQL-based ETL processes, creation of backend database objects, and dashboard development in Tableau. Collaborated with QA for testing, created documentation, and supported migration of legacy reports to newer platforms.

Responsibilities:

- Collaborated with **business analysts** and end users to gather requirements for report development and translated them into functional BI designs.
- Authored detailed functional specification documents capturing user requirements, system **inputs/outputs**, and technical design elements for **BI reporting solutions**.
- Developed and maintained interactive **dashboards, analytical reports**, and **KPI visualizations** to support business intelligence initiatives.
- Conducted unit testing and data validation **using SQL scripts** to ensure data accuracy and integrity across all reporting outputs.
- **Analyzed and enhanced existing reporting systems**, recommending improvements and assisting in the **integration of new technologies and processes**.
- Created and executed custom **SQL queries** and validation scripts to **troubleshoot data discrepancies** and perform **root cause analysis**.
- Identified tool-related bugs and limitations during development cycles, collaborated with product teams for fixes, and designed interim workarounds when necessary.
- Built and **deployed SQL/PLSQL** stored procedures, triggers, and functions for **backend automation**, indexing, and **efficient data transformation**.
- Created **Tableau** dashboards and visualizations based on **stakeholder requirements**, ensuring data-driven storytelling and usability.
- Enhanced existing **Tableau dashboards** to reflect updated metrics, **new business logic**, and improved layout for user experience.
- Performed and documented **data profiling**, mapping, and **transformation** logic to align source systems with reporting layers.

Environment: Tableau, Oracle, SQL Server, PL/SQL, Shell Scripting, Excel, Python (basic), Unix/Linux, Agile (Scrum), Confluence
