SUMMARY

Data Engineer with a Master's in Information Science and hands-on experience in SQL, Python, SPARQL, and ETL/ELT pipelines. Skilled in building scalable, high-volume data solutions with AWS, Snowflake, Spark, and Oracle. Experienced in OLAP modeling, BI reporting (Tableau, Power BI, QuickSight, MicroStrategy, OBIEE), and metadata governance. Proficient in designing low-latency, reliable pipelines and collaborating in agile, fail-fast environments. Adept at mentoring junior engineers and contributing to architecture and design reviews. Familiar with serverless computing, microservices, and real-time streaming (Kafka, Kinesis), with exposure to machine learning and predictive analytics.

TECHNICAL SKILLS

- **Programming:** Python, SQL, R, Java, C, Bash, SPARQL
- **Big Data & ETL:** Spark, Hadoop, Kafka, Airflow, NiFi, dbt
- **Data Warehousing & Modeling:** Snowflake, Redshift, Oracle, OLAP, Star Schema, Data Marts
- **Cloud Platforms:** AWS (S3, EMR, Redshift, Athena, Kinesis, Lambda), GCP (BigQuery), Azure
- **Visualization:** Tableau, Power BI, QuickSight, MicroStrategy, OBIEE
- **Other:** Data Governance, Metadata Management, System Architecture, Technical Documentation, Microservices, Agile/Fail-fast culture
- **Machine Learning:** Scikit-learn, TensorFlow, NLP (TF-IDF, Naïve Bayes), predictive modeling
- **Certifications:** AWS Cloud Practitioner, Google Project Management, Google Data Analytics, Excel Skills for Business

EDUCATION

The University of Mary Hardin-Baylor <i>Master of Science in Information Science, GPA: 3.86/4.0</i>	Belton, TX Aug 2021 - Dec 2023
JNTU Hyderabad <i>Bachelor of Technology in Computer Science Engineering, GPA: 3.2/4.0</i>	Hyderabad, Telangana, India Aug 2016 - May 2020

EXPERIENCE

Johnson & Johnson <i>Data Engineer</i>	Plano, Texas Aug 2023 – Present
• Design, optimize, and operate automated ETL/ELT pipelines using SQL, Python, Airflow, and AWS Lambda, integrating structured and unstructured sources to improve reporting efficiency by 30%. • Develop OLAP data models, star-schema designs, and governance frameworks to ensure scalable, high-performance data structures for analytics. • Build and maintain BI dashboards (Power BI, Tableau, QuickSight, OBIEE), providing abstraction layers for KPIs, data quality, and business insights. • Own full lifecycle from requirements gathering to design, implementation, testing, documentation, and metadata lineage tracking. • Contribute to system architecture and design reviews, evaluate new tools/approaches, and mentor junior engineers in best practices for data engineering.	
Cargill <i>Data Engineer Intern</i>	Wayzata, MN Feb 2022 – Feb 2023
• Built high-volume data pipelines with Apache NiFi, Kafka, and AWS EMR, reducing ingestion latency by 40% and enabling near real-time analytics at scale. • Designed OLAP schemas, optimized SQL and Oracle queries, and modeled datasets to support analytical use cases on Redshift and BigQuery. • Implemented serverless data transformations with AWS Athena and contributed to microservices-based ingestion architecture. • Delivered clean, testable Python/SQL code, applied design patterns, and deployed via CI/CD pipelines. • Automated data quality checks, monitoring, and alerting in Airflow, ensuring compliance with governance standards and reliability in production.	
Nipun Net Solutions <i>Business Data Analyst(Data Engineering Focus)</i>	Hyderabad, India June 2020 – June 2021
• Built and maintained ETL pipelines ingesting structured/unstructured data from Salesforce, SAP, and Oracle, ensuring consistency and governance compliance. • Created forecasting models and OLAP cubes to predict demand, sales trends, and potential risks. • Extracted and analyzed revenue/backlog data with Oracle SQL and Tableau, supporting 25% revenue growth through data-driven insights. • Built executive dashboards in Tableau and MicroStrategy, enabling self-service analytics and 15% account growth.	

Sales Analytics Platform — dbt + Snowflake

Nov 2023 – Dec 2023

- Designed and deployed dbt data models in Snowflake that reduced query time for reporting by 35%, enabling faster self-service insights for product managers.
- Applied star-schema and incremental modeling to handle large datasets efficiently, improving scalability of BI dashboards across Tableau and Power BI.

Real-Time IoT Data Pipeline — Kafka + Spark + AWS

Jan 2023 – Apr 2023

- Built a real-time ETL pipeline with Kafka and Spark Streaming to process IoT sensor events, achieving sub-second latency for analytics in Redshift.
- Automated orchestration, data quality checks, and alerting with Airflow, increasing reliability and reducing manual troubleshooting by 40%.
