Python Developer

SUMMARY PROFESSIONAL:

- Highly skilled Python Developer with 4+ years of experience in designing, developing, and implementing robust applications, including database migration, dashboard development, and automation.
- Expertise in building ETL pipelines, developing RESTful APIs, and optimizing data workflows across SQL and NoSQL databases.
- Hands-on experience in Python frameworks like Django, Flask, and Fast API, along with front-end technologies such as React.js, JavaScript, HTML5, and CSS3.
- Proficient in database migration from MongoDB to PostgreSQL, designing real-time monitoring dashboards, and implementing data validation and integrity checks for seamless migration.
- Strong background in cloud-based solutions using AWS (S3, RDS, Lambda), containerization with Kubernetes and Docker, and CI/CD pipelines for automated deployments.
- Experienced in Agile methodologies, SDLC best practices, and DevOps principles, collaborating with cross-functional teams to optimize application performance, automate processes, and ensure scalable solutions.
- Adept in JIRA for issue tracking, Git/GitHub for version control, and Linux-based deployments.
- Seeking a challenging role to leverage my expertise in Python development, data engineering, and cloud-based application design to drive innovation and business growth.

TECHNICAL SKILLS:

Programming Languages: C, Java, Python, JavaScript

Web Frameworks: Flask, Fast API, Django, Django REST Framework

Frontend Technologies: React.js, Angular, HTML5, CSS3, Bootstrap, JavaScript, AJAX, jQuery

Databases: PostgreSQL, MongoDB, MySQL

Data Processing & Analytics: Pandas, SQL Alchemy, ETL, NumPy

Cloud & DevOps: AWS (S3, RDS, Lambda), Kubernetes, Docker, CI/CD, GitHub Actions

APIs & Integration: RESTful APIs, Swagger, Postman

Version Control & Agile Tools: Git, GitHub, JIRA

Operating Systems: Linux, Windows

Automation & Scripting: Python (data validation, migration scripts), VMware Automation

PROFESSIONAL EXPERIENCE:

Southwest Airlines, Dallas, Texas, United States

Python Developer

Jul 2023 – Present

Responsibilities:

- Participated in daily stand-ups, sprint planning, retrospectives, and code reviews, providing valuable feedback on design and implementation.
- Followed Agile development methodologies and adhered to SDLC best practices, ensuring high-quality software development.
- Designed and developed a dashboard to monitor and track the migration process from MongoDB to PostgreSQL, providing real-time insights into data consistency, migration progress, and potential issues.
- Developed ETL (Extract, Transform, Load) pipelines using Python, Pandas, and SQL Alchemy, ensuring seamless data extraction, transformation, and loading between databases.

- Automated data validation and integrity checks by implementing scripts to compare record counts, schema structures, and data consistency before and after migration.
- Implemented RESTful APIs using Flask/FastAPI to expose migration status and logs to frontend applications.
- Designed a web-based dashboard using React.js and Bootstrap for visualizing migration metrics, including progress charts, error logs, and data validation reports.
- Optimized SQL queries and indexing strategies to improve performance and ensure efficient data retrieval in PostgreSQL after migration.
- Utilized AWS services (S3, RDS, Lambda) for cloud-based data storage and processing, ensuring scalability and reliability of the migration process.
- Designed and developed microservices-based applications using Python and other software engineering techniques ensuring scalability and maintainability.
- Developed Python scripts to handle schema mapping and data transformation, enabling smooth migration from NoSQL (MongoDB) to relational (PostgreSQL) databases.
- Containerized applications using Docker and orchestrated deployments using Kubernetes, ensuring consistency across development, staging, and production environments.
- Collaborated with cross-functional teams to validate migration requirements and ensure minimal downtime during database transition.
- Utilized JIRA for issue tracking and collaborated with teams for effective project management.
- Worked with Git/GitHub for version control and collaborative software development in an Agile environment.

Environment: Python, Flask, FastAPI, Django, React.js, HTML5, CSS3, Bootstrap, JavaScript, Pandas, SQL Alchemy, PostgreSQL, MongoDB, ETL, Restful APIs, AWS (S3, RDS, Lambda), Docker, Kubernetes, Git/GitHub, JIRA, Linux.

ADP Private Limited, Hyderabad, India

Python Backend Developer

Aug 2021 – Jul 2022

Responsibilities:

- Involved in analysis, specification, design, and implementation, testing phases of the Software Development Life Cycle (SDLC) and used agile methodology for developing applications.
- Collaborated with a team to develop back-end Python applications for data processing and analysis.
- Designed and developed web applications using Django and Flask frameworks.
- Built dynamic and responsive UI using HTML5, CSS3, JavaScript, TypeScript, AJAX, and jQuery.
- Worked with MySQL and MongoDB for database management, including designing schemas and writing queries.
- Developed RESTful APIs for seamless communication between frontend and backend services.
- Created and optimized Python scripts to process structured/unstructured data, including XML and JSON parsing.
- Implemented client-side validation using JavaScript, TypeScript, and jQuery to enhance user interactions.
- Wrote and optimized SQL queries, stored procedures, views, and triggers for efficient data retrieval.
- Utilized Git/GitHub for version control and collaborated with team members through Agile methodologies.
- Developed unit test cases to ensure application reliability and reduce bugs in production.
- Containerized the migration application using Docker, ensuring consistency across development and production environments.
- Debugged and troubleshoot applications using PyCharm, Postman, and logging frameworks.
- Gained hands-on experience working in Linux environments for deploying and maintaining applications.
- Experienced in JIRA for tracking bugs, task management, and workflow optimization in an Agile team setup.

Environment: Python, Django, Flask, MySQL, MongoDB, Linux, Git/GitHub, HTML5, CSS3, JavaScript, TypeScript, jQuery, AJAX, REST API, JIRA, Docker, Postman, PyCharm.

Zensar Technologies, Hyderabad, India

Python Developer

Apr 2020 – Jul 2021

Responsibilities:

- Developed new applications and enhanced existing ones using Python and MongoDB.
- Designed and implemented RESTful APIs using Flask/Django REST Framework, with Swagger for API documentation.
- Created a dynamic dashboard UI to visualize non-standard clusters, hosts, and vCenters, improving system monitoring.
- Designed and implemented automation scripts to evaluate end-to-end data flow, ensuring seamless transitions from database to UI to downstream systems.
- Automated VMware tasks using Python scripts, reducing manual workload by 50% and improving efficiency.
- Worked with NoSQL databases (MongoDB) to store and manage unstructured data efficiently.
- Collaborated with cross-functional teams to integrate APIs and optimize application performance.
- Utilized Git/GitHub for version control and managed code collaboration.
- Developed and tested scalable applications, ensuring reliability through unit testing and debugging.

Environment: Python, Flask, Django, MongoDB, REST API, Swagger, JavaScript, HTML5, CSS3, VMware Automation, Git/GitHub, Postman.

EDUCATION:

University of New Haven, West Haven, CT

Master of Science: Computer Science

CVR College of Engineering, Hyderabad, India

Bachelor of Technology: Computer Science and Engineering
