PROFILE

Results-driven Data Engineer with over 4 years of experience designing and optimizing data pipelines, ETL processes, and analytics solutions. Skilled in SQL, Python, Java, and big data technologies, with a strong background in cloud platforms like AWS and Azure. Proven track record of delivering scalable, efficient, and secure data architectures that support business intelligence and advanced analytics. Experienced in Agile methodologies and continuous integration practices.

SKILLS

Data Engineering & ETL — Databricks, Apache Airflow, PySpark, Snowflake, Amazon Redshift, Data Pipeline Development, ETL/ELT Design & Optimization, Data Quality Checks

Programming & Scripting — SQL, Python, Java, Scala

Business Intelligence & Visualization — Tableau, Microsoft Power BI, Excel, AWS QuickSight

Cloud Platforms — AWS (EC2, S3, Glue, Lambda), Azure (Synapse)

Databases & Storage: — Amazon Redshift, MongoDB, MySQL, PostgreSQL

DevOps & CI/CD — Jenkins, Git, SonarQube, Agile & Scrum Methodologies, JIRA

Other Tools & Technologies — Apache Spark, Apache Superset, Grafana

PROFESSIONAL EXPERIENCE

Epsilon, Data Engineer

06/2024 – present | Texas

- Designed and maintained scalable data pipelines using Databricks (PySpark) and Apache Airflow, processing over 2TB of data daily from multiple internal and external sources1.
- Built and optimized ETL/ELT workflows in Snowflake and Amazon Redshift, improving data processing performance by 40% and reducing query latency by 30%1.
- Automated reporting data pipelines to support marketing and analytics teams, resulting in a 25% reduction in manual reporting effort and faster delivery of business insights1.
- Developed comprehensive end-to-end reports in Microsoft Power BI, including data extraction, transformation, modeling, and visualization to deliver actionable insights.
- Created dynamic Power BI dashboards leveraging advanced features such as Bookmarks, Drill Down, Drill-Through, and implemented Row-Level Security to ensure data governance and interactive reporting.
- Leveraged Databricks on AWS for distributed data processing, enabling real-time insights from streaming data with sub-10-second data lag1.
- Collaborated with cross-functional teams to gather business requirements, driving the successful delivery of 15+ high-impact data products used in campaign targeting and personalization1.
- Implemented monitoring and alerting for data pipelines using Airflow and AWS services, ensuring high availability and rapid issue resolution.
- Participated in Agile sprints and CI/CD deployments, increasing deployment frequency by 2x and accelerating delivery timelines for data engineering projects1.
- Documented data pipeline architecture, transformation logic, and operational procedures to support knowledge transfer and long-term maintainability.

Virtusa Pvt Ltd, Data Engineer

01/2022 – 07/2023 | Hyderabad, India

- Designed and managed ETL pipelines processing over 500 GB of data daily, ensuring timely and reliable delivery for enterprise reporting systems1.
- Partnered with business analysts and architects to build scalable data workflows supporting both real-time and batch analytics for finance and telecom clients1.
- Optimized SQL queries and transformation logic, reducing ETL job run time by 30% and significantly improving data availability for business decision-making1.

- Led performance tuning and migration of legacy data pipelines to modern platforms, resulting in a 20% increase in operational efficiency1.
- Developed and implemented data quality checks and reconciliation processes, achieving 99.9% data accuracy in daily processing workflows1.
- Utilized SQL Server, Oracle, Apache Airflow, and Control-M to orchestrate, schedule, and monitor data workflows, ensuring seamless operation and rapid issue resolution

Dell Technologies, Junior Data Engineer

01/2021 – 01/2022 | Hyderabad, India

- Developed and maintained ETL pipelines using Databricks, Python, and SQL to automate data ingestion and transformation for analytics and reporting.
- Built and optimized data models and tables in SQL-based data warehouses, ensuring efficient data storage and fast query performance for business intelligence.
- Implemented data quality checks and audit frameworks in Databricks, identifying and resolving data inconsistencies to improve dataset reliability.
- Utilized Spark and PySpark to process and analyze large datasets, enabling data-driven decisions across product and sales teams.
- Designed and created Power BI dashboards and reports, transforming raw data into actionable insights for business stakeholders.
- Supported senior engineers in integrating data from various sources into AWS S3 and Snowflake, gaining hands-on experience in cloud data workflows.
- Collaborated with cross-functional teams in Agile sprints, contributing to project discussions, documentation, and the continuous improvement of data engineering practices

EDUCATION

University of Central Missouri, M. S. (Computer Science)

08/2023 – 05/2025 | Warrensburg, MO

CMR Institute of Technology, B. Tech. (Computer Science)

06/2018 – 05/2022 | Hyderabad, India
