Education

Masters in Advance Data Analytics, University of North Texas, USA

05/2024

Skills

Technologies	C, C#, VB.Net, T-SQL, PL-SQL
Net Technologies	ASP.NET1.1/2.0/3.5, ADO.NET, LINQ, C#.NET, WCF Services, Webparts, WinForms, .Net Framework and Versions
Web Technologies	HTML, DHTML, XML, XAML, CSS, AJAX, PHP, 3.0, jQuery
Database	SQL Server 2008/ 2015/2017/2019, MS Access, Oracle 9i/10g/11g, MySQL
Servers	IIS 5.0/6.0/7.0/7.5
Scripting Languages	Java Script, UNIX Shell Scripting, batch file scripting, jQuery, Angular JS version 12.
Operating System	Windows, MS DOS, UNIX GUI
Other Tools	WCF, PostMan, Matomo, GitLab
Reporting Tools	SSRS, Crystal report
Cloud Technologies	Aws and Azure cloud services.

Experience

Cigna Healthcare, USA - .NET Developer

(07/2024 – Present)

- Designed an internal network portal for hospitals using C#.NET, ASP.NET MVC 5, and Entity Framework 6, enabling real-time collaboration between clinics, surgical centers, and physicians, streamlining patient-lab interactions for over 15,000 users and reducing manual workflows by 20%.
- Optimized SQL Server 2019 queries, stored procedures, and triggers, reducing data retrieval times by 45% for dashboards tracking acute kidney injury and hypoglycemia patient metrics, empowering physicians to make critical decisions faster.
- Integrated Azure Cloud PaaS to manage scheduled tasks and data processing for CMS metrics, leveraging Azure Cognitive Services and Azure Machine Learning to predict patient outcomes, reducing preventable complications by 18%.
- Engineered responsive web applications using ASP.NET 4.6, AJAX, and Kendo UI, allowing physicians and staff to access patient histories, lab results, and teleconsultation schedules, improving overall user engagement by 30%.
- Built RESTful web services and WCF services to integrate lab results and teleconsultation data, reducing manual entry errors by 35% and ensuring accurate and timely updates for patient treatment plans.
- Migrated internal healthcare applications from on-premise infrastructure to Azure PaaS, enhancing the scalability and reliability of the hospital network portal by 55% and automating analytics for patient metrics using Python and Azure Machine Learning.
- Collaborated with cross-functional teams in Agile environments, contributing to daily scrum meetings, sprint planning, and reviews to ensure timely delivery of critical features for teleconsultation management and lab order tracking.
- Created analytics dashboards using SSRS and Crystal Reports, offering insights into customized order trends and outlet performance, driving a 15% increase in accuracy across operations.

CVS Health, USA - .NET Developer Intern

(01/2024 – 05/2024)

- Formulated a business logic for a supply chain portal using C# and VB.Net, enabling seamless operations between factories and outlets, handling over 500 customized orders daily.
- Implemented Azure-based solutions, including Worker Roles, Web Roles, and Service Bus, automating inventory and shipment notifications, leading to a 30% improvement in operational efficiency.
- Developed and integrated RESTful Web APIs using Web API and AngularJS, providing real-time updates on orders and inventory levels, reducing order processing times by 20%.
- Architected a SQL Server databases, optimizing Procedure script and reducing query execution times by 40%, ensuring timely delivery of inventory and sales reports.

DXC Technology, INDIA – Jr .NET Developer

(10/2019 – 12/2022)

- Assembled and implemented financial advisory models using C#, VB.Net, and T-SQL, analyzing customer portfolios and investment preferences, reducing portfolio optimization time by 25% and improving the accuracy of risk assessment strategies.
- Innovated and integrated investment recommendation workflows using ASP.NET and ADO.NET, enabling seamless collaboration between financial advisors and clients, reducing operational bottlenecks by 20% in delivering tailored investment options.
- Robusted LINQ and PL-SQL to query and manipulate large financial datasets, ensuring real-time updates for customer portfolios, stock performance, and fund returns, enhancing data accuracy by 30% for risk and return calculations.
- Collaborated with data scientists to refine investment allocation algorithms using SQL Server 2017 and Oracle 11g, achieving 99.5% accuracy in suggesting diversified portfolios based on customer profiles and market trends.
- Employed Postman to test and validate over 15 APIs used in the financial advisory portal, ensuring seamless communication between backend systems and customer-facing applications, achieving 99.9% uptime during critical trading hours.
- Augmented front-end applications using ASP.NET, AJAX, Kendo UI components, and HTML5, enabling real-time supply chain visualization and improving user satisfaction by 35%.
- Enhanced reporting capabilities by creating custom dashboards in SSRS and Crystal Reports, providing key insights on investment performance, market trends, and customer engagement, improving advisor decision-making by 20%.
- Integrated Matomo analytics to track user interactions on the advisory portal, identifying areas for improvement that reduced client drop-off rates by 18%, increasing subscriptions and improving customer satisfaction.
