

Sai Nithin Yasavarapu

Dallas, TX sainithinyasavarapu01@gmail.com +1 (806) 600-4623 [LinkedIn](#)

Professional Summary

Results-driven Full Stack Java Developer with 4+ years of experience designing, developing, and deploying scalable web applications in healthcare, finance, and education domains. Proficient in building secure, RESTful microservices using Java and Spring Boot, and creating responsive user interfaces with ReactJS, TypeScript, and Bootstrap. Experienced in automating cloud-native deployments using AWS (EC2, S3, RDS, Lambda) and infrastructure-as-code tools like Terraform. Strong advocate of Agile methodologies, clean code, and CI/CD pipelines with Jenkins and GitLab, with a focus on test-driven development using JUnit and Mockito.

Technical Skills

Programming Languages: Java (8–17), JavaScript, TypeScript, SQL, PL/SQL, Python

Frontend Technologies: ReactJS, HTML5, CSS3, JSP, jQuery, Bootstrap, AJAX, JSON, Responsive Design, UI/UX

Backend Technologies: Spring Boot, Spring MVC, Spring Security, Hibernate, JPA, Flask, RESTful APIs, Microservices, WebSockets

Databases & Cloud: MongoDB, MySQL, Oracle, PostgreSQL, Firebase, SQL, NoSQL, Database Design, AWS (S3, EC2, Lambda, RDS, SNS, SQS), Cloud Storage, Terraform, CloudFormation

DevOps & Tools: Git, GitLab, Bitbucket, IntelliJ IDEA, Eclipse, VS Code, Jenkins, GitLab CI/CD, Bitbucket Pipelines, Docker, JIRA, API Testing, Agile Development, Postman, MongoDB Compass

Testing & Logging: JUnit, Mockito, Log4j

Messaging & Integration: RabbitMQ, Apache Kafka, JMS, APIGEE Gateway

Machine Learning: TensorFlow, PyTorch, Scikit-learn, NLP, Predictive Modeling, FAISS, Neural Networks

Operating Systems: Windows, Linux, UNIX

Professional Experience

Java Full Stack Developer

Remote

Network Health

Jul 2024 – Present

- Contributed to the development of a secure **Healthcare Identity Management System**, leveraging **Spring Boot microservices** and **ReactJS** to deliver modular and responsive patient data applications.
- Designed and implemented backend components using **Java**, **Spring Security**, and **Spring AOP**, supporting robust authentication and authorization workflows.
- Built **RESTful APIs** for cross-module communication and consumed third-party services for external integrations, following **Microservices** best practices.
- Developed frontend components using **ReactJS**, **TypeScript**, **HTML**, **CSS**, and **Bootstrap**, enabling interactive UI screens for over **200 internal healthcare staff**.
- Utilized **Hibernate** with **Oracle** for persistence, reducing database access time by **30%** through query optimization and efficient ORM mapping.
- Managed **CI/CD** processes using **Jenkins** and version control with **Git**, reducing build time by **40%** and enabling faster release cycles.
- Integrated backend messaging using **Kafka**, improving system interoperability and reducing message delivery latency by **25%**.
- Deployed and maintained infrastructure components using **AWS** services such as **S3**, **RDS**, **SNS**, and **SQS**, cutting operational costs by **15%** via optimized cloud resource allocation.
- Participated in **Agile** ceremonies and contributed to the delivery of reliable releases through thorough testing, bug fixes, and requirement reviews.
- Implemented **unit testing** using **JUnit** and structured logging with **Log4j**, achieving **90% test coverage** and reducing production issues by **35%**.
- Collaborated with QA engineers, product managers, and UX designers to align technical implementation with business goals, resulting in a **25% reduction in post-release defects**.

Environment: Java, Spring Boot, Spring Security, Spring AOP, Hibernate, ReactJS, TypeScript, Bootstrap, REST APIs, Oracle, Maven, Jenkins, Git, JIRA, JUnit, Log4j, AWS (S3, RDS, SNS, SQS), Kafka, Agile

Change Healthcare

Jan 2024 – Jun 2024

- Contributed to developing the **Enterprise Health Data Platform**, a secure cloud-based system for managing patient data, device communication, and internal operations across hospitals and clinics.
- Developed and enhanced backend services using **Java 8**, **Spring Boot**, and **RESTful APIs**, supporting real-time healthcare workflows and large-scale data processing.
- Built and integrated dynamic **ReactJS** UI components to streamline patient interaction modules, utilizing **TypeScript**, **JSX**, and **Bootstrap** for responsive web performance.
- Designed and maintained backend persistence layers using **Hibernate** and **JPA**, writing optimized queries and managing schema evolution in **Oracle** databases.
- Integrated backend messaging systems using **RabbitMQ** and **JMS** to enable asynchronous communication across microservices.
- Conducted **unit testing** using **JUnit** and implemented structured logging with **Log4j**, improving traceability and reducing debugging time in production.
- Managed deployments using **GitLab CI/CD** pipelines and **Jenkins**, ensuring smooth releases across Dev, QA, and Production environments.
- Provisioned and configured **AWS infrastructure** using **CloudFormation** and **Terraform**, deploying services on **EC2**, **S3**, **RDS**, **VPC**, and **Lambda**.

Environment: Java 8, Spring Boot, ReactJS, TypeScript, Bootstrap, REST APIs, Oracle, Hibernate, JPA, Jenkins, GitLab, JUnit, Log4j, Maven, UNIX, AWS (EC2, S3, RDS, VPC, Lambda, CloudFormation), RabbitMQ, JMS, Agile

Java Full Stack Developer

Hyderabad

BSV Technologies Pvt Ltd

Mar 2021 – Jul 2023

- Contributed to the **Internal Content Management System (CMS)** project by developing and enhancing frontend features using **ReactJS**, **JSP**, **TypeScript**, **HTML5**, and **Bootstrap**, improving average page load times by **20%** and supporting over **500 active users**.
- Built scalable backend modules for CMS and the **Billing & Payment System** using **Java (Spring Boot, J2EE)** with **MVC architecture** and **RESTful APIs**, supporting up to **5,000 transactions/day** with **99.9% availability**.
- Optimized **Hibernate ORM** and **SQL queries** for high-volume datasets, reducing average query time by **15–20%** and improving data consistency across services.
- Containerized microservices using **Docker** and automated deployments with **Jenkins**, reducing manual release time by over **80%**.
- Implemented **Redis caching** within the billing platform to reduce load on backend APIs, improving response time by **40%** during peak usage hours.
- Integrated **APIGEE Gateway** to enforce API security, request throttling, and monitoring, enabling safe handling of financial transactions totaling over **\$150K/month**.

Environment: Java 8, Spring Boot, J2EE, RESTful APIs, ReactJS, JSP, HTML5, CSS3, TypeScript, Bootstrap, MySQL, Oracle, Hibernate, Redis, Docker, Jenkins, JIRA, Git, Bitbucket, Log4j, AWS CloudWatch, JUnit, Mockito, APIGEE Gateway, Kafka, Microservices Architecture, MVC, CI/CD, Agile

Education

Texas Tech University

Aug 2023 – May 2025

Masters in Computer Science

Sreenidhi Institute of Science & Technology

Aug 2019 – Jun 2023

B.Tech, Information Technology

Certifications

- Introduction to Programming Using Java – Microsoft
- AI-ML Internship Certificate – EduSkills Foundation
- AWS Academy Graduate - AWS Academy Machine Learning Foundations
