

SAI SREYA DEVATHI

Dearborn | Michigan | +1 (469)-954-3829|devathisaisreya@gmail.com

- With 2+ years of experience in Software Engineer and QA Tester with proven experience in delivering high-quality solutions using Java, Selenium, Cucumber, and Postman.
- Possesses expertise in Java and object-oriented design principles, along with over 1 year of experience in manual and automated software testing.
- Demonstrates proficiency in both collaborative and independent work to design, develop, deploy, and maintain scalable and reliable web applications and microservices.
- Skilled in creating and executing test cases, reporting bugs along with experienced in load, API, performance, functional, non-functional testing and collaborating with development teams to ensure high-quality software products.
- Excelled in master’s coursework projects, showcasing diverse technical expertise in Python, C, and Cadence.
- Continuously seeks to expand knowledge in QA practices and various testing methodologies and tools.

Skills

- Programming Languages: Java, Python, C, SQL, HTML
- Technologies: HTML, CSS, JavaScript, Rest API, JSON, MySQL
- Databases: MySQL, TSQL, MongoDB
- Testing Frameworks: Selenium, Cucumber, Junit, TestNG, Mockito, Maven, Log4j
- Operating Systems: Windows, Linux, MacOS
- Cloud: AWS, Azure.
- Version Control Tools: GIT, Jenkins
- IDEA: Eclipse, IntelliJ IDE, Visual Studio, Spring Tool Suite

Education

Master of Science in Computer Engineering <i>University of Texas -Dallas Texas USA</i>	January 2020 – December 2021
Bachelor of Engineering in Electronics and Communication Engineering <i>Anna University Chennai Tamil Nadu India</i>	August 2015 – April 2019

Experience

Software Development Engineering in Test, Satcon Inc, Irving, TX, USA	<i>May 2023 – present.</i>
--	----------------------------

- Participated in requirement analysis, identifying test scenarios, and creating test plans to ensure comprehensive test coverage.
- Enhanced application stability and reduced production bugs by creating a comprehensive Selenium test suite, utilizing Web Elements, Java, JUnit, and TestNG.
- Experience of data driven cross browser and parallel test execution using Selenium, Junit, TestNG and Cucumber.
- Experienced in Behavior Driven Development (BDD) using Cucumber, to ensure better understanding between technical and non-technical stakeholders, enhancing project clarity.
- Developed Automation Test Scripts using Hybrid Framework, Page Object Model in Selenium using Java.
- Implemented Data-Driven test to verify the same functionality with multiple sets of data.
- Conducted API testing using Postman to validate backend services and verify data integrity.
- Participated in User Acceptance Testing sessions to ensure the product meets user requirements and expectations.
- Performed integration testing to verify the interactions between different components and systems.
- Organized and automated test cases which reduced the total amount of time spent executing full regression tests.
- Implemented Mock testing while conducting unit tests, reducing dependency issues.
- Successfully executed SQL queries to verify and validate data which includes stored procedures and views.
- Knowledge of Object-oriented programs concepts in java Inheritance, Abstraction, Polymorphism, Encapsulation. Abstract classes & Interfaces in java, pattern programming, method Binding.
- Identified critical issues and worked with developers to ensure timely fixes, enhancing the reliability and performance.
- Worked with development teams to integrate Jenkins CI/CD pipeline with Git for version control, ensuring continuous testing and release cycles.
- Collaborated with cross-functional teams to define and implement testing strategies, ensuring alignment with business requirements and user needs
- Knowledgeable in using Cypress and Playwright for automating end-to-end tests and integrating with CI/CD pipelines.
- Knowledge of Agile methodology and active participation in grooming, sprint planning, sprint review, estimation, retrospectives and standups.

Software Development Engineer, Amazon, Detroit, MI, USA	<i>February 2022 – March 2023</i>
--	-----------------------------------

- Devised and deployed reusable user interface (UI) components, such as buttons, forms, and menus, to improve the platform's usability and enrich the user experience.
- Generated unit tests and integration test cases using JUnit, with Log4j providing logging and debugging capabilities resulting in a reduction in critical issues and a significant boost in user satisfaction levels.
- Experienced in using HTML, CSS, and JavaScript for developing and designing web applications, contributing to front-end development projects.
- Built dashboard creation logic in Infrastructure and CDK files using TypeScript, monitoring >5 metrics related to traffic, CPU utilization, memory usage, data transfer latency, error rate, throughput, alarms, and alerts.
- Engaged on MySQL database management systems with SQL queries, capable of improving database queries for efficient retrieval and performance.
- Experienced in deploying, and managing AWS solutions using S3, DynamoDB, CloudWatch, and CloudFormation to improve application performance, scalability, and reliability.
- Established code reviews throughout the software development lifecycle using the Git version control system, including code inspection, revision tracking, branching, merging, resolving conflicts, and facilitating team collaboration.
- Managed over 100 low-severity tickets and addressed 20 high-priority emergency issues throughout 5 weeks of on-call shifts. Initiated and implemented prompt actions to address incidents and ensure uninterrupted system operations.
- Orchestrated the automation of build, test, and deployment procedures in close collaboration with a cross-functional team.
