Professional Summary:

Experienced and dedicated **Java Full Stack Developer** with over **5 years** of proven success in designing, developing, and deploying scalable, high-performance web applications for global clients in the automotive, robotics, and financial sectors. Adept in handling both frontend and backend technologies with strong problem-solving abilities and a deep understanding of enterprise software architecture. Skilled in delivering RESTful APIs, complex SQL processing, mainframe integration, batch data pipelines, and cloud-native deployments using **Spring Boot**, **React**, **Node.js**, **AWS**, and **Cloud Foundry**. Excels in Agile Scrum environments, collaborating cross-functionally to deliver robust, maintainable, and secure applications. Experienced Full Stack Java Developer with a strong foundation in Java, Spring Boot, RESTful Web Services, and Microservices, delivering secure and scalable backend solutions.

- **Designed and deployed scalable RESTful APIs** using **Spring Boot**, enabling secure communication between internal microservices and external third-party platforms.
- **Built dynamic, cross-browser front-end applications** using **React.js**, **Bootstrap**, **TypeScript**, and **JavaScript**, enhancing user interaction and responsiveness across devices.
- **Automated complex data feed pipelines** using **Java**, **Autosys**, and batch processing frameworks to push data to downstream systems like **MBDA Data Lake**.
- **Engineered robust database schemas** and crafted efficient queries in **MongoDB**, **PostgreSQL**, **MySQL**, and **IMS DB**, optimizing read/write performance and ensuring data integrity.
- **Integrated mainframe COBOL/CICS modules** with modern Spring Boot-based microservices to modernize legacy functionality without disruption.
- **Configured and managed AWS resources** including **EC2**, **S3**, and **RDS**, ensuring scalability, fault tolerance, and secure data storage.
- **Deployed applications to cloud environments** using **Cloud Foundry**, streamlining deployment pipelines and supporting multiple microservices.
- **Containerized applications using Docker**, created and maintained separate dev and QA environments, and collaborated with DevOps for smooth CI/CD workflows.
- **Built and optimized batch and streaming pipelines** for real-time and scheduled data ingestion, transformation, and reporting.
- **Implemented RBAC and secure authentication mechanisms** (e.g., **JWT**, **OAuth2**) across services to enforce access control and compliance standards.
- **Led feature-level development**, conducted peer **code reviews**, provided architectural suggestions, and mentored junior developers on Java, REST, and clean code practices.
- **Participated in Agile ceremonies** including sprint planning, stand-ups, and retrospectives; worked closely with **Product Owners** and **Scrum Masters** to refine user stories and deliver value.
- **Created unit and integration tests** using **JUnit**, **Mockito**, and API test suites using **Postman**, reducing bugs and increasing test coverage.
- **Enhanced system performance** by identifying bottlenecks, applying caching, query optimization, and reducing payload sizes for faster API response times.
- **Authored comprehensive documentation**, including **API specs**, **workflow diagrams**, and **deployment runbooks**, supporting faster onboarding and smoother handovers.
- **Worked collaboratively with QA, DevOps, and product teams** across regions to resolve defects, validate business logic, and ensure release quality.
- **Adapted to new technologies** like **Node.js**, **Python scripting**, and **YAML-based frameworks** to meet project-specific needs.
- **Managed cross-functional technical discussions** between front-end, back-end, and data engineering teams to align architecture and ensure consistency.
- **Recognized for driving stability**, system uptime, and user experience improvements through timely feature delivery, clean architecture, and test-driven development.
- **Handled cross-time-zone collaboration**, delivering priority fixes and enhancements under tight deadlines and evolving requirements.
- **Worked on UI enhancements** to improve accessibility and usability for end users, aligning with WCAG and responsive design best practices.
- **Contributed to sprint demos and stakeholder meetings**, showcasing implemented features and gathering actionable feedback for future iterations.

Programming Languages	Java, JavaScript, TypeScript, SQL, HTML5, CSS3, Python, COBOL
Backend Frameworks	Spring Boot, Spring MVC, J2EE, Hibernate, JDBC, Struts
Frontend Technologies	React.js, Angular, Bootstrap, JSP, HTML5, CSS3, JavaScript, AJAX
Databases	MongoDB, MySQL, PostgreSQL, IMS DB, DB2, Oracle, PL/SQL
Cloud & DevOps	AWS (EC2, S3, RDS, CloudWatch), Cloud Foundry, Docker, Jenkins, Node.js
Testing Tools	JUnit, Postman, Manual Unit Testing, Functional Testing, PIT, DR
Web Services	REST, SOAP, JSON, AJAX
Version Control	Git, SVN (Subversion)
Build & CI Tools	Maven, Jenkins
IDE & Tools	Eclipse, IntelliJ IDEA, Chrome DevTools, Visual Studio Code
Agile & Project Tools	JIRA, Confluence, Scrum, Sprint Planning, Retrospectives
Design & Patterns	MVC, DAO, Singleton, Factory, Service Locator, SOLID, DRY, KISS
Mainframe Tools	CICS, TSO, JCL, CA7 Scheduler
Other Tools/Systems	WebLogic, GEMS Framework, Netting Framework, TDSD, RMM, EAD

Professional Experience :

Client: Ford, MI

Dec 2023 - present

Role:Java Web Full Stack Developer

Responsibilities:

- Developed a tool to retrieve and send data to third party service provider this feature was implemented using REST.
- Used Scrum Agile methodology with regular 2-week Sprint cycles working on planned/groomed user stories. Daily Scrum,Sprint cycle Reviews, Retros and planning meetings in the presence of Product Owner, Scrum Master.
- Developed cross-browser/platform **HTML5, CSS, and JavaScript** to match design specs for complex page layouts while adhering to code standards.
- Added new programs or modified the existing COBOL/CICS modules which uses IMS DB/DB2 database as per the requirement using mainframes.
- Created Controllers, Modules, and Pipes in **TypeScript**.
- Used **Java SpringBoot framework** to store and process the complex consumer information.
- Used Java functional programming concepts to develop business logic.
- Modified existing java-based feed generation process to include basket components data and to send it to down-stream MBDA Data Lake from Imagine system.
- Created Autosys batch jobs to automate feed generation process and sending the generated feed to downstream MBDAData Lake.
- Configured to source data (from Imagine system and its source systems) into new system using existing yaml & java-based data sourcing framework
- AWS EC2** instances were configured in developing and QA environments with **NodeJS**.
- Designed and implemented the user interface and interactive web pages using **HTML5, CSS3, JavaScript**.
- Used **AJAX and JSON** to make asynchronous calls to the project server to fetch data on fly.
- Designing, developing, and maintaining complex SQL queries for data analysis and data extraction as per client requirements
- Used **Bootstrap, Node.js** in effective web design.
- Worked on Cloud implementation by installing, building and deploying applications using Cloud Foundry and using AWS.
- Created Buckets in **AWS** and stored files. Enabled Versioning and security for files stored.

Company : NalaRobotics, India

Aug 2021 - July 2023

Role : Full Stack Developer

Responsibilities:

- Designed and developed **scalable RESTful APIs** using **Java** and **Spring Boot** to support real-time robotic kitchen systems.
- Built **Controller, Service, and Repository** layers to handle business logic, data transformation, and persistence using **MongoDB**.
- Developed and maintained **responsive front-end components** using **Bootstrap, JavaScript**, and **HTML5** to power admin dashboards and device interfaces.
- Participated in **end-to-end feature development**, from requirement analysis and API design to front-end integration and deployment.
- Created and optimized **MongoDB schemas and queries** to support high-throughput sensor data ingestion and reporting modules.
- Implemented **role-based access control (RBAC)** to ensure secure access and operation of critical modules across roles and user types.
- Collaborated with QA teams to reproduce, triage, and resolve bugs using **JIRA**, ensuring a defect-free delivery cycle.
- Conducted **unit and integration testing** using **JUnit** and **Postman** to ensure robust API functionality and backward compatibility.
- Participated in **Agile ceremonies**, including sprint planning, stand-ups, retrospectives, and backlog refinement for iterative delivery.
- Integrated third-party APIs for hardware communication and sensor monitoring, enhancing system automation and reliability.
- Managed **Docker-based deployments** in development and staging environments, coordinating with DevOps on production releases.
- Created and maintained **project documentation**, including system architecture, API specifications, and deployment guides for internal teams.
- Collaborated closely with cross-functional teams including robotics engineers and product owners to translate hardware requirements into software features.
- Assisted in performance tuning and memory management of long-running backend services for 24/7 operational uptime.
- Mentored junior developers in Java best practices, clean code principles, and full-stack debugging strategies.

Client: Sonata Information Technology Limited, India

June 2019 - July 2021

Role: Java Developer

Responsibilities:

- **Involved** in Analysis, Design and Implementation/translation of Business User requirements.
- Design and development of data enrichment business process objects using Rete based in-house rule engine framework
- Integrated the application with custom in-house GEMS and Netting frameworks
- Design and development of various levels (MI hierarchy levels) netting calculation business process objects using in house
- netting engine **framework** for various asset categories like loans, deposits, inventory, Repo, SLB and Derivatives
- Involved in analyzing the application requirement along with BA and produced required technical specifications
- Used Reference Data cache to load frequently used data into memory to avoid redundant database reads.
- Design and development of Template Remediation for regulatory reporting.
- Design and development of DAO's using **Hibernate, JDBC, SQL** and **PL/SQL**
- **Design** and development of operational data validation reports using **JSP, Struts, HTML, JavaScript, AJAX**
- Used Slot id-based table partitioning for partition strategy of high-volume data tables.
- Involved in writing SQL queries and stored procedures and invoking them from Components.
- Design and development of ARTS balance sheet and MIS Drill Down Reports
- Involved in the unit testing the application using JUnit. Unit tested the changes and performed the code review.
- Performed joint system testing the application that involved other downstream systems.
- All new functionality has been delivered on schedule with excellent quality and performance.
- Performed code merge activities for Sub Version source control systems. Generated code build scripts using Ant tool.
- Involved in supporting of UIT, FT, PIT and UAT and DR testing
- Involved in Configuration and deployment of applications on WebLogic 10.0.3
- Provided necessary support for BAU and major release go-live activities for the application
- Provided necessary support in addressing application related data validation queries to Business Analysts and Front office.
- Involved in integration of in-house Netting and GEMS framework with various applications like TDSD, RMM and EAD.
