SUMMARY

- 4+ years of experience in full-stack development across all SDLC phases, building scalable web and enterprise applications using Java, Spring Boot, microservices, and modern front-end frameworks like React and Angular, strong in JavaScript, and TypeScript.
- Proficient in backend technologies including Spring MVC, Hibernate, RESTful APIs, Kafka, and Eureka; skilled in authentication (Spring Security, OAuth 2.0, JWT), testing with JUnit and Mockito, and working with PostgreSQL, MySQL, and MongoDB.
- Experienced in CI/CD pipelines with Jenkins and Bitbucket, cloud deployments using AWS (EC2, S3, RDS, Lambda, CloudWatch), Azure (Blob, AD, monitor) containerization with Docker, centralized logging (SLF4J, Grafana), and Agile methodologies.

SKILLS

Languages : Java, J2EE, Python, SQL, JavaScript, TypeScript, HTML/CSS, React.js, AngularJS, PLSQL, Redux.js, Bootstrap

Frameworks : Spring Boot, Spring MVC, Spring Security, Spring IOC, REST APIs, SOAP, Servlets, Hibernate, JDBC, Apache Kafka

Tools: Git, Github, Jenkins, Bitbucket, JIRA, Maven, Gradle, JUnit, Mockito, Postman, Apache Tomcat, IntelliJ IDEA, VSCode

Databases/Cloud: Postgres, MySQL, MongoDB, Redis, Oracle, AWS, Azure, Docker, Terraform

Concepts: Agile, Waterfall, BDD, TDD, Design Patterns, Data Structures & Algorithms, Singleton, DAO, Facade, MVC

EXPERIENCE

Cortracker Inc

Houston, TX, USA

Software Engineer

June 2025 - Present

- Developed a blog microservice using Spring Boot and PostgreSQL with CRUD operations, comment management, and JWT-based role-secured authentication; documented REST APIs with Swagger/OpenAPI.
- Collaborated in Agile ceremonies and maintained technical documentation, integration steps, and sprint deliverables on Confluence for cross-team visibility and timely delivery.

University of South Florida - Information Technology

Tampa, FL, USA

Full Stack Engineer

October 2023 - March 2025

- Designed and developed scalable Spring Boot microservices with layered architecture, DTOs, REST APIs, and optimized Oracle SQL queries to cut latency by 40% under high concurrency.
- Built a modular Angular frontend with reactive forms, lazy loading, route guards, and service-based state handling to enable dynamic form generation and real-time UI updates.
- Implemented robust inter-service communication using Apache Kafka and Kafka Streams for real-time updates, reducing inter-service latency by 30%, and applied Resilience4j for circuit breakers, retries, and graceful degradation.
- Secured authentication via Azure AD and Microsoft Graph API; containerized microservices with Docker, automated deployments through Jenkins, and enforced code quality with Bitbucket merge validations, reducing deployment time by 50%.
- Implemented centralized observability with Azure Monitor, App Insights, and Zipkin; built a Kafka-driven notification service with Azure Communication Services; and strengthened quality with JUnit, Mockito, and Cypress, cutting production defects by 35%.

Accenture

Hyderabad, TG, India

Full Stack Java Developer

September 2020 - July 2022

- Modernized legacy systems by migrating JSP/Servlet/jQuery applications to Spring Boot, Spring MVC, and React, improving scalability and accelerating development by 30%.
- Rebuilt backend by migrating from MongoDB to PostgreSQL with Liquibase schema versioning, improving query performance and transactional reliability by 45%.
- Designed and developed 20+ RESTful APIs with layered Spring Boot architecture, global exception handling, and standardized status codes; implemented secure microservices with JWT, OAuth2, and Keycloak for role-based access.
- Containerized services with Docker, established inter-service communication using RestTemplate, WebClient, and Eureka, reducing environment setup time by 40% and improving system resilience.
- Implemented centralized logging with SLF4J and AWS CloudWatch, automated AWS Lambda jobs with CloudWatch alarms and SNS alerts, and achieved 85%+ unit test coverage, cutting issue resolution time by 50% and reducing production defects.

Magna Infotech

Hyderabad, TG, India

Java Developer

January 2020 - August 2020

- Developed backend services for a web application using Spring Boot and MySQL, implementing modular service layers, RESTful APIs, and efficient database interaction with Hibernate, JPA, and Spring Data.
- Collaborated in an Agile environment using Jira, performing API testing with Postman, participating in code reviews, debugging, and delivering stable backend modules.

EDUCATION

University of South Florida | Master's | Computer Science

August 2022 - May 2024

CVR College of Engineering | Bachelor's | Computer Science

August 2016 - May 2020
