

Sai Teja

Sr. Java Full Stack Developer

+1 469 482 7981 | tejargula@gmail.com | www.linkedin.com/in/tejar8

Certifications:

[AWS Certified Solutions Architect](#)

[Oracle Data Platform - Certified Foundations](#)

[Oracle Cloud Infrastructure - Certified Foundations](#)

[Oracle Cloud Infrastructure - Certified AI Foundations](#)

Professional Summary:

Full Stack Java Developer with 6 years of experience in designing, developing, and deploying enterprise-grade applications across telecom, banking, and healthcare domains. Skilled in building scalable microservices using Java 8/11, Spring Boot, Hibernate, JPA and creating responsive front-end applications with ReactJS, Angular 9, and TypeScript. Experienced in event-driven architectures using Apache Kafka and Azure Service Bus, as well as ETL workflows with Python and Airflow for large-scale data integration. Proficient in cloud-native deployments on Azure and AWS with Docker, Kubernetes, PCF, and CI/CD automation using Jenkins, Maven, Git, and TFS. Strong background in API modernization (SOAP → REST), system security with OAuth 2.0, JWT, Azure AAD, and compliance (HIPAA, OWASP). Adept at Agile collaboration, test automation (JUnit, PyTest, Mockito, Postman), and monitoring with Splunk, CloudWatch, and Application Insights, ensuring reliable, secure, and high-performing solutions.

Technical Skills:

Programming Languages	Java 8/11, Python, TypeScript, JavaScript (Node.js)
Frameworks & Libraries	Spring Boot, Hibernate, JPA, ReactJS, Angular 9, Redux, HapiJS, Drools
Databases	Azure SQL, Cosmos DB, MongoDB, Cassandra, Redis, PL/SQL, SQL DB, Blob/Table Storage
Messaging & Streaming	Apache Kafka, Azure Service Bus, ActiveMQ
Cloud Platforms & Services	Azure (AKS, Functions, Logic Apps, AAD, Security Center, Cosmos DB, Azure ML, Application Insights, Monitor), AWS (EC2, EKS), PCF
DevOps & CI/CD	Jenkins, Maven, Git, TFS, Docker, Kubernetes, Azure CLI, PowerShell, Apigee, Azure API Management
Testing Tools	JUnit, Mockito, Postman, PyTest, Jasmine, Karma, Mocha, Chai
Monitoring & Logging	Splunk, CloudWatch, New Relic, Spring Boot Actuator, Application Insights
Other Tools	MS Visio (UML), Airflow, Logic Apps

Professional Experience:

Client – Frontier Communications, Dallas, TX

June 2024 – Present

Role – Full Stack Developer

Responsibilities:

- Designing and developing microservices using Java 8/11, Spring Boot, Hibernate, and JPA, ensuring modularity, scalability, and seamless integration.
- Building responsive UIs with ReactJS, Angular 9, and TypeScript, enabling real-time dashboards for network performance monitoring and customer management.
- Integrating Apache Kafka and Azure Service Bus for real-time event streaming, enabling instant processing of network events, alerts, and customer notifications.
- Migrating legacy SOAP services into REST APIs, improving performance and interoperability between telecom components.
- Worked on Azure SQL Database, Cosmos DB, Redis, and MongoDB for handling large telecom datasets like call records, billing transactions, and customer profiles.
- Deploying microservices on Azure (AKS, Functions, PCF), ensuring high availability and scalability across distributed systems.
- Secured APIs using Azure Active Directory (AAD), OAuth 2.0, and JWT, ensuring compliance with telecom-grade data protection standards.
- Leveraged Oracle Database and PL/SQL to manage high-volume telecom data such as call detail records (CDRs), billing transactions, and customer profiles, ensuring high availability and optimized query performance.
- Implemented Oracle GoldenGate for real-time data replication and synchronization across distributed systems, supporting seamless integration between on-premise and cloud (Azure) environments.

- Optimized data pipelines with Oracle Data Integrator (ODI) to handle ETL workflows for billing, fraud detection, and churn analytics, enabling faster and more reliable downstream processing.
- Built ETL pipelines in Python and automated workflows using Azure Logic Apps and Airflow for data ingestion from heterogeneous sources.
- Implementing ML models via Azure Machine Learning Service for predictive analytics (churn detection, fraud prevention, network load forecasting).
- Continuous Monitoring application performance using Azure Monitor, Application Insights, and Splunk, ensuring minimal downtime and optimal SLAs.
- Automated CI/CD with Jenkins, TFS, Maven, and scripted deployments using Azure CLI and PowerShell.

Tools & Technologies: Java 8/11, Spring Boot, Hibernate, JPA, Kafka, Azure Service Bus, ReactJS, Angular 9, TypeScript, Node.js, MongoDB, Redis, Oracle, Cosmos DB, Azure SQL, PCF, Azure Functions, Azure Logic Apps, Azure ML, OAuth 2.0, JWT, Jenkins, TFS, Docker, Kubernetes, Azure CLI, PowerShell, Splunk, JUnit, Jasmine, Karma, Mocha, Chai.

Client – Webster Bank, Stamford, CT

October 2023 – May 2024

Role – Java Full Stack Developer

Responsibilities:

- Collaborated in Agile sprints, performing code reviews, sprint planning, and delivering production-ready features within strict timelines.
- Designed and developed scalable backend microservices using Java 11, Spring Boot, and exposed them through RESTful APIs with HapiJS, ensuring secure and efficient system-to-system communication.
- Built React and Redux front-end modules, implementing reusable components, form validation, and API integrations to deliver a seamless and responsive user experience.
- Ensured system security by implementing OAuth 2.0 and JWT authentication, and followed OWASP best practices for input validation and threat mitigation.
- Implemented event-driven microservices with Apache Kafka, enabling real-time data streaming, messaging, and asynchronous processing across distributed systems.
- Worked with Cassandra and MongoDB for high-volume data storage, optimized queries, and implemented caching strategies to reduce latency and improve performance.
- Developed Python-based ETL pipelines to extract, transform, and load large-scale datasets, ensuring data consistency and reliability across microservices.
- Collaborated in pair programming sessions using Python and Java, improving debugging efficiency, accelerating feature delivery, and enhancing code quality.
- Implemented unit and integration tests with PyTest to validate ETL workflows and data pipelines, ensuring accuracy and reducing defects in production.
- Performed unit and integration testing using JUnit, Mockito, and Postman, improving code quality, coverage, and system reliability.
- Integrated Oracle Database with Spring Data JPA/Hibernate to persist and manage transactional data for backend microservices, ensuring reliability and ACID compliance.
- Developed optimized PL/SQL procedures, triggers, and complex queries to support ETL pipelines and real-time analytics, reducing processing latency for large-scale datasets.
- Implemented Oracle partitioning and indexing strategies to improve query performance and handle high-volume data storage alongside Cassandra and MongoDB.
- Built CI/CD pipelines with Jenkins, Git, and Maven, automating build, test, and deployment workflows to accelerate delivery and reduce manual effort.
- Deployed and orchestrated containerized applications on AWS (EC2, EKS) using Docker and Kubernetes, ensuring scalability, high availability, and fault tolerance.
- Integrated Spring Boot Actuator and monitoring tools (CloudWatch, New Relic) for application health checks, metrics, and log analysis.

Tools & Technologies: Java 11, Spring Boot, HapiJS, React, Redux, Python, Cassandra, MongoDB, Apache Kafka, Oracle, OAuth 2.0, JWT, OWASP, JUnit, Mockito, Postman, PyTest, Jenkins, Git, Maven, Docker, Kubernetes (EKS), AWS (EC2, EKS), Spring Boot Actuator, CloudWatch, New Relic

Client – Wipro, Hyderabad, India

Jan 2022 – July 2022

Role – Software Developer

Responsibilities:

- Built and optimized RESTful APIs with Spring Boot, improving response times and throughput.

- Designed persistence layers with Hibernate/Spring Data JPA, streamlining CRUD operations and reducing query errors.
- Automated testing with JUnit and Selenium, reducing bug-related incidents and improving release confidence.
- Refactored legacy Java code, enhancing processing speed and maintainability.
- Architected microservices with Spring Cloud, improving scalability and reducing infrastructure overhead.
- Implemented CI/CD with Jenkins and Docker, accelerating deployment cycles and release cadence.
- Deployed containerized services on AWS EKS with Kubernetes, ensuring high availability and seamless scaling.
- Enhanced observability with AWS CloudWatch and ELK Stack, enabling proactive issue detection and resolution.
- Delivered features in Agile/Scrum sprints through planning, stand-ups, and backlog refinement.
- Leveraged Oracle Machine Learning (OML) with SQL and Python to train and deploy predictive models within Oracle Database, supporting AI-driven feature enhancements and anomaly detection.
- Utilized Oracle Autonomous Database with built-in AI/ML capabilities for real-time insights, enabling smarter API responses and improved customer engagement analytics.
- Integrated AI-driven features, improving user engagement and customer satisfaction.

Tools & Technologies: Java 8/J2EE, Spring Boot, Spring Cloud, Hibernate, Spring Data JPA, RESTful Web Services, JUnit, Selenium, Jenkins, Docker, Kubernetes (AWS EKS) AWS CloudWatch, ELK Stack, Git, Maven, Jira

Client – Apollo Hospitals

August 2018 – December 2021

Role – Software Developer

Responsibilities:

- Designed use cases, class/sequence diagrams, and workflows using UML (MS Visio) to capture healthcare process requirements.
- Built customer self-service and patient engagement modules using Java, Spring Boot, Hibernate, React.js, and Angular 9.
- Utilized Java 8 features (Streams, Lambda Expressions, Functional Interfaces) to improve code efficiency, concurrency handling, and readability in healthcare workflows.
- Modernized legacy SOAP services into RESTful APIs, managed through Apigee and Azure API Management, ensuring interoperability with external provider systems.
- Migrated and optimized microservices to Java 11, leveraging its performance improvements, garbage collection (G1/ZGC), and modularity (JPMS) for scalable deployments.
- Implemented business rules (Drools) for claims processing, eligibility checks, and benefits validation.
- Worked with Azure (Cosmos DB, SQL DB, Blob/Table Storage, Functions, AAD, Logic Apps, Security Center) for cloud deployment, scalability, and secure data handling.
- Used Kafka and ActiveMQ for real-time streaming and messaging between healthcare subsystems (e.g., EMR/EHR, billing, insurance).
- Developed Oracle PL/SQL stored procedures, functions, and triggers to manage patient data, claims processing, and regulatory reporting with high accuracy and performance.
- Leveraged Oracle Database with advanced security features (TDE, Data Masking) to ensure HIPAA compliance and protect sensitive healthcare records during processing and storage.
- Developed and optimized SQL queries, PL/SQL stored procedures, triggers for patient data and claims reporting.
- Ensured data security and compliance by implementing OAuth 2.0, JWT, and Azure AAD, aligned with HIPAA standards.
- Built CI/CD pipelines with Jenkins, Maven, Git, and TFS for automated deployments across cloud and hybrid environments.
- Collaborated with QA teams, implemented JUnit and automated testing to maintain accuracy and reliability of healthcare workflows.

Tools & Technologies: Java 8/11, Spring Boot, Hibernate, React.js, Angular 9, RESTful APIs, Apigee, Azure API Management, Azure, Kafka, ActiveMQ, OAuth 2.0, JWT, Azure AAD, HIPAA compliance, SQL, PL/SQL, Jenkins, Maven, Git, TFS, CI/CD & DevOps, JUnit, Automated Testing

Educational Details:

Masters – Computer Science – Governors State University

Bachelors – Computer Science – St. Peters Engineering College
