Education

University of Georgia – Bachelor of Science in Computer Systems Engineering

May 2024

Experience

Full Stack Software Engineer Intern, Dosth.ai – Remote

Jan 2025 – Sept 2025

- Architected admin dashboard for **5+ administrators** overseeing global platform operations across **17 countries**, enabling efficient moderation of 500+ user generated stories from **250+ international users**
- Implemented performance optimizations including lazy loading and batched Firestore queries, **reducing dashboard load times by 40%** and cutting database costs for high-frequency content moderation operations
- Developed **RESTful APIs** with Express.js and Firebase Cloud Functions supporting real-time data synchronization between mobile app and admin portal, streamlining content moderation workflows
- Created reusable UI component library with responsive design and edit tracking, reducing development time for new admin features and improving operational efficiency
- Engineered character creation system on Dosth.ai web app using **DALL-E** and **OpenAI APIs**, allowing users to create and reuse custom characters, improving content personalization and user experience

LLM Coding Evaluator (Contract), Outlier.ai – Remote

Sept 2024 – Jan 2025

- Supported RLHF training workflows evaluating LLM-generated code across **Python, JavaScript, C++, and SQL** to optimize code generation quality
- Diagnosed edge cases & performance bottlenecks; provided targeted feedback improving model accuracy by **15%**
- Assessed over **50 coding tasks** across LLM training projects for Google, OpenAI, and Meta, improving performance on API design, front-end, and algorithms

Software Engineer Intern, PetReady – Suwanee, GA

May 2024 – Sept 2024

- Developed cross-platform mobile MVP using React, React Native, TypeScript, and Firebase, contributing over **130 pull requests** and **162 commits** within a 6-week go-to-market timeline
- Engineered backend microservices with Firebase and Google Cloud, implementing serverless functions for real-time data synchronization and user authentication systems
- Maintained **99.9% service uptime** while optimizing application scalability for **60+ beta testers** during initial launch phase
- Participated in Agile development sprints and daily standups, translating feedback from **120+ customer interviews** into feature implementations resulting in **30% increased user satisfaction**

Research Assistant, UGA Machine Intelligence Lab – Athens, GA

Oct 2020 – May 2021

- Developed ML algorithm for urban sound classification achieving **90% accuracy** and automated data preprocessing pipelines reducing manual handling by **50%**

Projects

- **AI Coding Agent** | *Python, Google Gemini API* - Built intelligent coding assistant using Gemini 2.0 Flash that analyzes codebases and executes development tasks through natural language queries
- **Pulse Train Classifier** | *Python, TensorFlow, Keras* - Developed neural network (RNN) for Robins AFB Capstone to classify interleaved pulse trains with 95% confidence using scikit-learn, TensorFlow, and Keras
- **Image Classification Web Application** | *Flask, YOLO, ViT* - Created web application using vision models deployed on Oracle Cloud
- **Machine Learning API Service** | *Flask, scikit-learn, SQL* - Built REST API training neural networks from database with prediction functionality

Skills

Programming Languages: Python, Go, Java, C, C++, JavaScript, TypeScript, HTML, CSS, SQL

Frameworks & Libraries: React.js, React Native, Tailwind CSS, Flask, TensorFlow, Keras, Node.js, Express.js

Cloud/DevOps: Google Cloud Platform, Firebase, Oracle Cloud, Docker containerization, Git, CI/CD pipelines

Systems/Tools: Linux/UNIX systems, Kubernetes orchestration, RESTful API design, microservices architecture
