

SAKSHI MENGHANI

Data Analyst

Location: USA | **Phone:** (667) 369-8506 | **Email:** sakshi.menghani98@gmail.com | [LinkedIn](#)

PROFESSIONAL SUMMARY:

- Over **3 years** experienced **Data Analyst** and proficiently advised and coached in programming languages such as **Python, SQL** and possibly others like **MATLAB, R, Java, C** and **C++** for data manipulation, analysis and development of data pipelines.
- Skilled in using essential data analysis libraries such as **NumPy, Pandas, Seaborn, Matplotlib** and potentially others like **SciPy, Scikit- Learn** and **TensorFlow** for advanced data processing and analysis, effectively demonstrating insights.
- Demonstrated expertise in databases like **MySQL, PostgreSQL, Oracle** and **MongoDB** for data storage, retrieval and management, efficiently organizing data.
- Competently directed and managed data visualization tools such as **Tableau, Power BI** and **Excel (VLOOKUP, PivotTables, Macros, VBA, Power Query)** for effective communication of insights, stimulating collaboration.
- Familiarity with cloud platforms such as **AWS, Azure** and **Google Cloud Platform** for scalable and reliable data solutions, facilitating efficient deployment.
- Proficiently coordinated and developed tools like **Git/GitHub, Docker, Jupyter Notebook** and potentially others like **Spark** and **API** for efficient development, collaboration and deployment, accelerating project timelines.
- Adept at creating comprehensive documentation for data analysis processes and tools to ensure clarity, reproducibility, and ease of understanding for stakeholders and team members.
- Experience with **SAP** for integrating and managing enterprise data, enhancing data-driven decision-making across organizational processes.

SKILLS:

- **Languages:** SQL, Python, R, MATLAB, Bash, Advanced SQL, C, C++, Java
- **Data Analysis Tools:** Tableau Desktop, Python (Pandas, NumPy), Datorama, Power BI, Matplotlib, Seaborn, Alteryx, SAS, Google Analytics, Adobe Analytics, Data Studio, Looker
- **Database Technologies:** SSIS, SSAS, SSRS, JIRA, T-SQL, PL/SQL, Microsoft Hyper-V Servers, Teradata (R12, R13, R14.10), MS SQL Server, DB2, Netezza, SQL Server, MySQL, PostgreSQL, Oracle, MongoDB
- **Big Data:** Azure Data Studio, Access, MapReduce, Pig, Hive, AWS EMR, AWS S3
- **Tools/Libraries:** Excel, Talend, NLTK, A/B Testing, MS Visio, Hadoop, Pyspark, Weka, Postman, VS Studio, Airflow, Git/GitHub, Docker, Kubernetes, Jupyter Notebook, Spark, API, Web Services, Microsoft Power Automate, SAP, Salesforce, ServiceNow
- **Methodologies:** SDLC, Agile, Waterfall, Scrum
- **Operating Systems:** Windows, UNIX, Linux, Mac
- **Data Analysis Skills:** Data Cleaning, Data Modelling, Data Warehousing, ETL, Hypothesis Testing, Regression Analysis, A/B Testing, Clustering, Forecasting
- **Machine Learning:** Logistic Regression, Decision Tree, Random Forest, K-Nearest Neighbor (KNN), Principal Component Analysis
- **Cloud Platforms:** AWS (EC2, S3, Lambda, AWS Glue, Redshift), Azure (Blob Storage, Azure Synapse Analytics, Azure Data Factory, Azure Databricks, Azure Functions), Google Cloud Platform (Google Cloud Storage, BigQuery, Cloud Dataflow, Compute Engine)

EDUCATIONS:

Masters in Information Sysrmes, University of Maryland at Baltimore, USA
Bachelors in Computer Science, BIT DURG College, India

Aug 2022 – May 2024
Aug 2016 – Sep 2020

EXPERIENCES:

CRISP Shared Services, USA
Data Management Analyst

Jun 2023 – Jun 2024

- Automated data ingestion and transformation using Python and Airflow, improving operational efficiency and data reliability. Leveraged Databricks SQL to retrieve and prepare extensive datasets, demonstrating strong SQL and data management skills.
- Performed data integration and synchronization with IBM InfoSphere, achieving 98% accuracy in managing data quality for over 1500 patient records.
- Developed engaging dashboards using Tableau, Power BI, and Excel, resulting in a 20% increase in data understanding and a 15% boost in decision-making efficiency.
- Reviewed over 300 clinical reports, enhancing data precision and achieving a 30% improvement in data quality.
- Collaborated with implementation managers, prioritizing ENS panels and ensuring data integrity.
- Optimized Power BI workbooks, enhancing dashboard responsiveness and user experience.
- Executed complex SQL queries and ETL processes using SQL Server and Azure Data Factory.

- Utilized Pandas and NumPy for data cleaning and preprocessing, ensuring data consistency.
- Applied machine learning algorithms and statistical techniques using Python and R for predictive modeling and data analysis. Leveraged cloud platforms like AWS, Azure, and Google Cloud Platform for scalable data solutions.
- Created comprehensive documentation for data workflows and conducted knowledge sharing sessions to enhance team skills.

Infosys

Jun 2021 – Aug 2022

System Data Engineer

- Analyzed Google Fitbit user data for 200+ users weekly, producing insights that increased user retention by 22%. Contributed to app testing and improvement on iOS and Android.
- Built a real-time monitoring utility system to track user feedback, reducing duplicate bugs by 35%. Showcased skills in real-time data tracking and bug tracking.
- Developed automated data validation scripts using Python and SQL, reducing manual data cleaning by 50% and ensuring data integrity across systems. Demonstrated proficiency in data validation and process automation.
- Contributed to the development of an embedded data system for real-time test data capture on smartwatches and smartphones, reducing data acquisition latency by 20%. Demonstrated expertise in real-time data capture and embedded systems.
- Architected and implemented scalable ETL pipelines with Apache Spark and AWS Glue, processing terabytes of data daily and reducing processing time by 30%. Demonstrated skills in ETL processes, big data, and cloud computing.
- Defined and enforced data governance policies across ETL processes, ensuring compliance with regulatory requirements and best practices for data security. Showcased knowledge of data governance and compliance.
- Collaborated with cross-functional teams to gather requirements and translate business needs into interactive Tableau reports and dashboards, ensuring alignment with organizational objectives and KPIs. Demonstrated skills in requirements gathering, data visualization, and KPI tracking.

Think and Learn Pvt Ltd

Nov 2020 – Apr 2021

Data Analyst

- Spearheaded data analysis efforts to identify client needs and collaborated cross-functionally to develop data-driven marketing and sales.
- Achieved a remarkable 15% increase in conversion rates, directly attributable to data insights-driven strategies. This translated to a substantial boost in revenue of approximately \$2.5 million over the course of the project, highlighting the tangible impact of data-driven decision-making on overall business success.
- Designed and implemented complex SQL queries, stored procedures, and views to extract, transform, and analyze large-scale datasets, optimizing query performance and reducing processing time by 40%.
- Developed and implemented advanced statistical models and machine learning algorithms, including logistic regression, decision trees, and random forests, to forecast trends and identify patterns in large-scale datasets.
- Conducted performance tuning and optimization exercises on ETL workflows, utilizing techniques such as parallel processing, partitioning, and indexing to enhance data processing speed and efficiency.
- Collaborated with cross-functional teams to define KPIs and metrics, and developed interactive dashboards and visualizations using Tableau and Power BI to track performance and monitor key business metrics.
- Leveraged advanced Excel functionalities such as VLOOKUP, INDEX-MATCH, and Macros to automate data processing tasks, streamline reporting workflows, and improve overall productivity.

Philips Healthcare

Dec 2019 – Sep 2020

Data Analyst

- Developed a predictive model using Python to analyze patient data and forecast potential health issues, improving early intervention measures.
- Implemented data cleaning and preprocessing techniques in SQL and Pandas to ensure the accuracy and reliability of the dataset. Created interactive visualizations in Tableau to present key insights and trends to stakeholders, enhancing data-driven decision-making.
- Conducted hypothesis testing and regression analysis to identify critical factors affecting patient health outcomes.
- Collaborated with cross-functional teams using Agile/SCRUM methodologies to integrate the analytics model into the existing patient monitoring system.

PROJECTS:

Covid - 19 Data Analysis (Python, JavaScript, ReactJS, Tableau) - Covid 19 Data Analysis

- Developed a COVID-19 data analysis system using Tableau, Python, and React JS to highlight recovery rates and country-wide statistics from over 12,000 data points.
- Led data collection efforts in key regions of Asia, covering 75% of the affected populace, optimizing resource allocation, and improving pandemic response efficiency by 25%.

Credit card fraud detection (SQL, Python, Jupyter notebook) - Credit card fraud detection

- Integrated algorithms such as logistic regression into our credit card fraud detection system using NumPy, Pandas, and Matplotlib, boosting efficiency and accuracy by 25%.

- Developed a predictive model using ANN, SVM, and K-Nearest Neighbors (KNN) to classify transactions, achieving 94% accuracy and 99% precision, accurately predicting 492 frauds out of 284,807 transactions.

Bitcoin Price Prediction using XGBoost

- Designed a predictive analytics tool using XGBoost and MapReduce to forecast Bitcoin prices, performing EDA and feature engineering, and achieving an 80% feature selection rate.
- Evaluated the model with ROC-AUC curves and plotted the confusion matrix to measure and observe prediction accuracy.
