

Objective

Skilled and solutions-driven Python Full Stack Developer with **3+ years** of experience in designing, developing, and deploying dynamic web applications. Proficient in Python, Django/Flask, JavaScript, HTML, CSS, and RESTful APIs, with a solid understanding of front-end frameworks like React/Angular.

Profile Summary

- Having **3+ years of experience** in **Design, Development. Implementation** of **Python, Django and client - server technologies based applications.**
- Experienced in **HTML/HTMLS, DHTML, CSS/CSS3, Java Script JQuery, Angular JS, AJAX, XML and) JSON.**
- Expert in Object Oriented Design and Programming concepts using **Python and java.**
- Proficient in modern front-end frameworks like **React** and **Vue.js**, leveraging their reactive and component-based architectures to create dynamic and efficient user interfaces.
- Worked on several **python** packages like **Numpy, mat Plot Lib, Beautiful Soup, Pickle, PySide, Scipy, wx Python, PyTables** etc. Excellent communication and time management skills.
- Worked on various applications using **python** integrated **IDEs** Sublime **Text PyCharm, Net Beans, Spyder and IntelliJ.**
- Good experience in developing **web applications** and implementing Model View Control (**MVC**) architecture using server-side applications **Django, Flask** and Pyramid Developed web applications using **HTML. CSS, Java Script. JQuery, AJAX, XML and) SON** Implemented responsive web pages using **HTML5/CSS3 and Bootstrap.**
- Familiar with **XMUJSON** based **SOAP** and **REST** web services Good experience in handling errors and exceptions.
- Experienced in debugging the issues using debuggers like **gdb, pdb.**
- Hands on experience with various application servers and web servers including **Apache Tomcat. Apache** http servers, Web logic and **WebSphere** Expertise in working with different databases using **Oracle MySQL.**
- Good knowledge in using **NoSQL** databases like **Apache Cassandra** (1.2, 2.0, and 2.1) and **MongoDB** (2.6. 2.4).
- Proficient in developing complex **SQL queries** Stored Procedures, Functions, and **Packages** along with the **DDL** and **DML** queries Knowledge able with continuous deployment using **Heroku and Jenkins.**
- Expertise in establishing database connections for Java and **Python** by configuring packages like **JDBC MySQL-Python.**
- Extensive experience in developing applications using **Java API. Swing HTML 3/4/5, Flex. Java Script. CSS2/3, J Query, JDBC, JSF.JMS.XML** Hands on experience in working with various Version Control Systems, mostly **GIT, CVS and SVN.**
- Developed **J2EE** applications on **JDE's** like Eclipse My Eclipse **Google GWT**, and Rational Application Developer Experience in designing the automation framework using **Python, Corn and Shell scripting.**
- Familiarity with development best practices such as code reviews. Unit testing with unit test and integration testing with **pivots Involved** in all the phases of Software Development **Life Cycle (SDLC).**
- Experience in writing **test scripts, test cases, test specifications** and test coverage. Have good knowledge on Project management tools **JIRA.** Red mine and Bugzilla Good experience in working on **AWS S3 with Amazon EC2.**
- Experienced in developing applications using agile **methodologies** like **Test Driven Development (TDD), Scrum** and also using **Waterfall** methodology Worked on various operating systems **Windows XP/7/8/ 10, UNIX and Linux.**
- Experienced in **Linux** shell commands and command line utilities Worked in the team and faced challenges during the project development and production process Capable to learn new technologies and to work in the team environment independently Experience on **LAMP & WAMP.** (Windows, Apache, MySQL and PHP) architecture.
- Proficient in workflow orchestration using Apache Airflow, designing and optimizing dynamic DAGs (Directed Acyclic Graphs) to automate complex task scheduling, manage interdependencies, and ensure seamless pipeline execution with robust error handling.
- Extensive experience with Snowflake, including building ETL pipelines, optimizing data storage and processing, creating materialized views, and automating data ingestion and transformation with Streams and Tasks for efficient analytics and reporting.

- Skilled in Terraform, provisioning and managing cloud infrastructure resources across AWS environments for scalable and efficient deployment.
- Expertise in Datadog, configuring monitoring dashboards, alerts, and metrics for real-time observability and troubleshooting across cloud-based applications and services.

Technical Skills

Operating Systems:	Windows 98/2000/XP/7,8, Mac OS, UNIX and Linux CentOS, Debian, Ubuntu
Programming Languages:	Python, Java, C#, PHP
Web Technologies:	HTML, CSS, XML, DOM, AJAX, jQuery, JSON and CSS Bootstrap.
Frameworks:	Django, Flask, Pyramid, Pyramids python, Angular JS, Node JS, Spring, Hibernate, React and Vue.js
Webserver:	Apache HTTP webserver, Web Logic, Web Sphere, JBoss and Apache Tomcat
IDE:	Eclipse web storm, Sublime Text Brackets, Pycharm, and Studio Scripter.
Analytic Tools:	Google Analytics Fiddler
Cloud Computing:	AWS EC2, S3, RDS (MySQL), SQS, Terraform
Deployment Tools:	Heroku, Amazon EC2. Jenkins and Fabric
J2EE:	JDBC, JNDI, JSP and servlets
Databases:	Oracle 8i/9i/10g/11g, MySQL, SQLite3, Cassandra, Redis and mongo DB
Data Tool	Snowflake
Testing Tools:	Bugzilla, jasmine, Py unit. JIRA and junit zone, Pytest, Nose Robot, Datadog
Orchestration Tools	Apache Airflow
Protocols:	TCP/IP, HTTP/HTTPS, SOAP
Miscellaneous:	Git, SVN, CVS

Professional Experience

Client: MetLife, Colorado, USA

Aug 2023 – Present

Role: Python Full Stack Developer

Description: MetLife is a leading global provider of insurance, annuities, and employee benefits, dedicated to helping individuals & businesses achieve financial security & peace of mind. Developed digital banking solutions by integrating back-end systems with third-party platforms, managing multiple bank portfolios, & implementing secure authentication services.

Responsibilities:

- Analyzed system requirements specifications and participated in client interactions during requirements specifications.
- Developed the presentation layer using HTML, CSS, JavaScript, jQuery, and AJAX, along with modern front-end frameworks like React and Vue.js to create dynamic and responsive user interfaces.
- Built and orchestrated workflows using Terraform to provision and manage cloud infrastructure resources across AWS efficiently, enabling seamless scalability and consistency.
- Configured Datadog monitoring dashboards and alerts to track the performance and health of applications, ensuring high availability and quick incident response.
- Proficient in building reusable and scalable components with React and Vue.js, leveraging their powerful state management and virtual DOM features to enhance front-end performance and maintainability.
- Implemented SQLAlchemy, a Python library, for comprehensive SQL access and management.
- Worked on Element Tree XML API in Python to parse XML documents and load the data into databases.
- Integrated Snowflake data warehouse for efficient data storage, processing, and analytics:
 - Designed and developed ETL pipelines to load data into Snowflake using Python and SnowSQL.
 - Created complex queries, views, and materialized views in Snowflake to support business intelligence and reporting.
 - Optimized Snowflake performance through clustering, partitioning, and efficient use of compute resources.
 - Automated data ingestion and transformation processes using Snowflake Streams and Tasks.
- Provided digital banking solutions by integrating banking core back-end systems with the Q2 platform in an N-tier architecture using web technologies and Python programming.
- Managed S+ bank portfolios simultaneously by providing implementation support and maintenance services.
- Worked on web forms' back-end APIs with Python integration frameworks for banks and credit unions, utilizing a component-based design architecture.
- Integrated Transfer Now and Pop Money services provided by Fiserv using Single Sign-On (SSO) authentication service with the Python requests module.

- Implemented Pershing Integrated Reporting service with Cross-Domain Single Sign-On (CDSSO) authentication using SAML Assertions. Used ANT as a build tool on Java projects for creating build artifacts from the source code.
- Managed AWS EC2 instances, utilizing Auto Scaling, Elastic Load Balancing, and Glacier for QA and UAT environments, as well as infrastructure servers for SVN and Chef.
- Developed Spring middleware components to implement business logic and built a Service-Oriented Architecture (SOA) using web services to create a loosely coupled system.
- Worked on Funds Transfer APIs and developed widgets like External Transfers, Future-Dated Transfers, Member-to-Member Transfers, Scheduled Transfers, and Recurring Transfers.
- Leveraged Vue.js for building complex, yet lightweight front-end solutions, enabling seamless integration with back-end APIs and enhancing overall application responsiveness.
- Good understanding of technical banking terminology such as ABA Internal and External account numbers, PFM accounts, and External accounts.
- Built and orchestrated workflows using Apache Airflow to automate complex task scheduling, manage interdependencies, and monitor workflows in real-time.
- Implemented dynamic task dependencies and error recovery mechanisms to ensure uninterrupted pipeline execution.
- Designed and optimized Airflow DAGs (Directed Acyclic Graphs) for seamless integration with Snowflake and other data storage systems.
- Configured Airflow's logging and alerting features for better observability and faster incident resolution.

Environment: Python 2.7, Snowflake (Version 6.x), Airflow, HTML5, CSS, XML, KML, MySQL, JavaScript, React, Vue.js, AngularJS, jQuery, CSS, Bootstrap, RESTful, MS SQL Server, MongoDB, Windows 12 Server, Amazon S3, Jenkins, Pytest, Robot, GitHub, BitBucket, Linux, and Windows.

Client: DaVita Medical Group, Colorado, USA

Nov 2022 - Jul 2023

Role: Python Full Stack Developer

Description: DaVita Medical Group was a leading healthcare provider specializing in delivering high-quality medical care through a network of physicians, clinics, and outpatient centres. Managed the integration and support of middleware applications, optimizing data flow and enhancing functionality across multiple systems while ensuring secure and efficient operations.

Responsibilities:

- Worked with Middleware using Message driven by POJO (MDP) after creating QCF, Queue on WebSphere server, and using JMS template for asynchronous functionality for multiple users.
- Involved in enhancing existing MEAN (Mongo OB, Express, Angular and Node) stack applications and provided the required support made the integration of data in several applications in favour JSON documents with dynamic schemas using Mongo OB (NOSQL) database.
- Used GIT as version control system, to keep track of all the work & all changes, allowing several developers to collaborate and used Maven as build and configuration tool and Jenkins for continuous integration tool.
- Developed various helper classes needed following Core Java multi-threaded programming and Collection classes.
- Involved in configuration and usage of Apache Log4J for logging and debugging purposes. Used RAO as IOE tool to develop the application.
- Prepared Documentation for Unit Test Plan and Unit Test Results for the QA purpose Participated in the release night shakeouts/overnight deliveries and QA Support.
- Worked on Solar Elastic Search, Kafka Flume, Mongo OB, Cassandra and RabbitMQ
- Generating Scala, Play Framework and java classes from the respective Alp's so that they can be incorporated in the overall application Implemented advanced procedures like text analytics and processing using the in-memory computing capabilities like Apache Spark written in Scala.
- Managed Amazon Web Services like EC2 S3 bucket, ELB Auto-Scaling SNS SQS, AM I, IAM, Dynamo OB, Elastic search Virtual Private Cloud (VPC) through AWS Console and API Integration.
- Extensively used Linux. UNIX system administration tools to create servers and deploy and run applications in development stage.
- Configured the xml files for Hibernate 3 and applied its Object Relational Mapping ORM to enable the data transactions between POJO and Oracle Database using caching on Session Factory as well as caching on query.
- Configured the xml files for Spring Security injection to ensure the back-end security by discriminating the role of users as well as access authority for the Urals and Server side assets.

- Built S3 buckets and managed policies for S3 buckets and used S3 bucket and Glacier for storage and backup on AWS. Configured an AWS Virtual Private Cloud (VPC) and Data Base subnet group for isolation of resources within AWS RDS Design develops support, educate, and train on frameworks and technologies including Cloud, BPMN.
- Microservices, Docker Kubernetes, CI/CD, application servers logging, messaging, and much more.
- Developed a fully automated continuous integration system using Git. Jenkins, MySQL and custom tools developed in Python and Bash Developed application using Eclipse IDE using most of the Core and Advance Java concepts.
- Providing support & development of web based applications and TCP/IP socket applications in UNIX, using PHP, C. Perl, Java Script Oracle, MS SQL t-sql, PL/SQL, open SSL Docker lize application by set Docker file, Docker Compose plugin. Writing entities in Scala Play Framework and Java along with named queries to interact with database.

Environment: POJO, QCF, Queue, Core Java multi-threaded programming, GIT, Apache, Solar Elastic Search, Kafka Flume, Mongo OB, Cassandra and RabbitMQ, POJO, Oracle, AWS Virtual Private Cloud (VPC), Docker Kubernetes, CI/CD.

Client: Capgemini (Coca-Cola), Georgia, USA

May 2021 - Jul 2022

Role: Senior Python Developer

Description: Coca-Cola is one of the most recognized and valuable brands globally is primarily manufactures and sells beverage concentrates and syrups to bottling partners. Contributed to analyzing system requirements and developing user-friendly web interfaces while collaborating with clients and teams throughout the project lifecycle.

Responsibilities:

- Analyzed system requirements specifications and also in client interaction during requirements specifications developed the presentation layer using HTML, CSS, JavaScript.)Query and AJAX.
- Used Query libraries for all client-side JavaScript manipulations.
- Used pelt package to extract. Transform and Load tables of data Utilized Python libraries wx Python, numPY, Twisted and mat Plot lib Implemented SQL Alchemy which is a python library for complete access over SQL.
- Actively involved in developing the methods for Create Read Update and Delete (CRUD) in Active Record Used Robot Test automation framework for testing of the GUI of the application.
- Developed views and templates with Python and Django's view controller and templating language to create a user-Friendly website interface Skilled in collections and used for manipulating and looping through different user defined objects Experienced in Agile Methodologies and SCRUM Process.
- Used Django configuration to manage UR s and application parameters Created entire application using Python, Django, MySQL and Linux Worked on Elementtree XMLAPI in python to parse XML documents and load the data in database Coordinated with the offshore developing team and assisted them when required.
- Used Amazon Elastic Beanstalk with Amazon EC2 to deploy project into AWS Accessed database objects using Django Database APIs Created database using MySQL wrote several queries to extract/store data Exported/Imported data between various data sources.
- Identified several hidden bugs caused by complicated multithreading issues such as race conditions caused by asynchronous events and resolved them deployed the project into Heroku using GIT version control system Responsible for debugging and troubleshooting the web application.
- Took part in the entire project's lifecycle which includes Design, Development and Deploying, Testing Implementation and support Used Design patterns efficiently to improve the code reusability.

Environment: Python 2.7, Django 1.7, HTMLS, CSS. XML, KML MySQL java Script Angular JS, JQuery, CSS Bootstrap, RESTful, MS SQL Server, MongoDB, Elastic Search, Ubuntu server Windows 12 Server, Apache CQ, TFS, Amazon s3, Jenkins. Map Box, Mongo DB, zone pytest Robot GitHub, Bit Bucket Linux and Windows.

Education

- Masters in Computer Science from University of Colorado Denver, Colorado, USA

Personal Projects

Advanced Machine Learning & AI Expertise:

- Selecting and implementing analytics tools to manage the full machine learning model lifecycle across teams, leveraging open-source frameworks like Python, R, TensorFlow, Keras, PyTorch, and Scikit-learn for building and deploying AI-driven solutions.
- Developed multiple AI/ML projects, including:
- Olympics Games Statistical Insights Using Machine Learning – Utilized ML for predictive analytics and strategic planning in Olympic sports.
- AI Image Inquiry Assistant – Built an advanced Conversational AI system for analyzing images and text-based queries.

- Object Detection using AI and Deep Learning – Implemented real-time object detection using Python, OpenCV, and deep learning frameworks.
- A Data-Driven Approach to Thwarting DDoS Attacks – Applied ML for cybersecurity to detect and mitigate DDoS attacks in real time.
- Stand-Alone Language Translator – Designed an AI-powered language translator using Python, PyTorch, and JavaScript, enhancing cross-lingual communication.

Data Engineering & Business Analytics Expertise:

- Expert in data extraction, processing, and analytics using SQL, NoSQL (MongoDB, Cassandra, Snowflake), with hands-on experience in big data frameworks like Hadoop, Spark, Apache Airflow, and Databricks.
- Worked on large-scale data warehouse systems, writing optimized SQL queries for complex datasets (Teradata experience is a plus).
- Strong background in business analysis, with experience in data mining, feature engineering, and model tuning to improve performance and accuracy.
- Experience working with third-party data providers (DNB, Acxiom, InfoGroup) to integrate firmographic, psychographic, and demographic data into AI-driven decision-making.

Machine Learning, Deep Learning & Recommendation Systems:

- Hands-on experience building and deploying ML/DL models for various domains, including image processing, cybersecurity, and predictive analytics.
- Implemented Recommendation Systems using collaborative filtering, content-based filtering, and hybrid approaches for enhancing web analytics and customer engagement.
- Applied deep learning techniques (CNN, RNN, GRU, LSTMs) and time series forecasting models (ARIMA, ARMA, Survival Analysis) for predictive analytics and business intelligence.
- Strong understanding of A/B testing, test-and-learn design concepts, and real-world model validation.
- Cloud Computing & Infrastructure:
- Deployed ML models in cloud environments using AWS (EC2, S3, RDS, Lambda, Terraform, Kubernetes, Docker, Datadog) for scalable AI-driven solutions.
- Hands-on experience with containerization, orchestration, and model lifecycle management using KubeFlow, MLflow, and Apache Airflow.

Statistical & Computational Expertise:

- Strong mathematical and statistical foundation with a background in computational sciences, econometrics, and physics.
- Extensive experience in data visualization and analytics using Tableau, Matplotlib, Seaborn, and Power BI for creating interactive dashboards and insights-driven reports.
- Experience in real-time anomaly detection and predictive modeling for cybersecurity, financial forecasting, and operations optimization.
