

Saloni Champavat | Data Analyst

NJ, USA | +1 (848)-336-5304 | salnichampavat7@gmail.com | [LinkedIn](#)

SUMMARY

Data Analyst with **4 years of experience** delivering measurable results in finance, healthcare, and technology. Skilled at transforming complex datasets into actionable insights that improved forecast accuracy by 15%, reduced reporting cycles by 35%, and accelerated executive decision-making. Recognized for driving efficiency, ensuring compliance, and supporting strategic business growth with data-driven solutions.

TECHNICAL SKILLS

SQL / Databases: queries, joins, window functions, CTEs, optimization; PostgreSQL, MySQL, SQL Server
Programming: Python (pandas, NumPy, matplotlib, seaborn) for cleaning, analysis, visualization
BI & Visualization: Tableau, Power BI, Looker, Qlik; KPI dashboards, storytelling, executive reporting
Data Prep & Analytics: Excel (PivotTables, Power Query, XLOOKUP), cohort/funnel analysis, hypothesis testing, A/B tests, forecasting (ARIMA/Prophet)
ETL & Modeling: dbt, Airflow basics, dimensional modeling (star/snowflake), KPIs, slowly changing dimensions (SCDs) **Warehousing & Cloud:** Snowflake, BigQuery, Redshift; AWS (S3, IAM), GCP (BigQuery, GCS), Azure (ADLS) **Governance & Quality:** Data validation, anomaly checks, PII/GDPR awareness, role-based access control
Soft Skills: Stakeholder communication, translating business needs into data solutions, cross-functional collaboration, data storytelling

PROFESSIONAL EXPERIENCE

Intel Corporation Jan 2025 - Current
Data Analyst

- Optimized 120+ SQL queries, reducing reporting latency 30% and accelerating critical decision-making across global business units.
- Built Tableau and Power BI dashboards monitoring 50 KPIs, improving executive reporting efficiency 25% organization-wide.
- Systematized ETL pipelines with Airflow and dbt, cutting manual errors 40% while strengthening data integrity enterprise-wide.
- Designed GDPR-compliant anomaly detection workflows, increasing dataset accuracy 95% and ensuring reliable insights across regulated operations.
- Provided scalable data pipelines, enhancing workflow productivity 20% and boosting enterprise-wide data availability across multiple departments.
- Improved KPI consistency through optimized enterprise models, reducing calculation errors and accelerating reporting turnaround by 15%.
- Produced actionable analytics enabling senior leadership to streamline planning processes and align operations with organizational priorities.

Goldman Sachs Group, Inc., India May 2021 - Jun 2023
Data Analyst

- Built Snowflake and BigQuery warehouses integrating diverse sources, improving reporting precision 30% across finance and risk teams.
- Created Looker and Qlik dashboards covering 40 KPIs, reducing manual reporting cycles 35% for senior executives.
- Boosted forecasting accuracy 15% using predictive analytics and Python, enabling informed investment decisions impacting multi-million portfolios.
- Mechanized SQL and Python reporting workflows, lowering manual effort 25% and accelerating analytics delivery timelines by 30%.
- Implemented RBAC and PII masking, ensuring compliance and protecting confidential financial datasets from regulatory breaches globally.
- Upgraded portfolio efficiency 18% by delivering data-driven insights aligning analytics with enterprise investment and operational strategies.
- Generated risk performance reports, enabling executives to assess exposure, monitor compliance, and make faster informed decisions.

Medtronic PLC, India Apr 2020 - Apr 2021
Business Analyst

- Conducted cohort and funnel analysis, uncovering operational trends that increased clinical efficiency 20% across patient workflows.
- Developed Tableau and Power Query dashboards for 25 KPIs, boosting reporting turnaround 30% for healthcare executives.
- Translated clinical and operational requirements into analytics solutions, improving workflow productivity 15% within healthcare operations.
- Ensured HIPAA compliance with anomaly detection and governance, preserving 99% dataset integrity for sensitive healthcare reporting.
- Identified process bottlenecks and provided recommendations, reducing delays 12% and improving patient throughput across multiple departments.
- Computerized recurring KPI reporting pipelines, cutting manual effort 40% and increasing reporting timeliness for clinical dashboards.
- Presented operational insights supporting refined patient outcomes, reduced costs, and streamlined decision-making within healthcare business units.

EDUCATION

Master of Science in Computer Science May 2025
Adelphi University, Garden City, NY, USA
Bachelor Of Science in Computer Science Apr 2022
Sardar Patel University, India
