

Saloni Patadia

Ontario, California, 91764 | 213-646-3740 | salonipatadia123@gmail.com | <https://www.linkedin.com/in/salonipatadia/>

EDUCATION

- University of Southern California, Los Angeles, California** **Aug 2022 - May 2024**
Masters of Science, Computer Science
CGPA: 3.7/4
Courses: Machine Learning, Analysis of Algorithms, NLP, Data Mining, Foundations of AI, Deep Learning and Information Retrieval
- K.J Somaiya Institute of Engineering and Information Technology, Mumbai, India** **Aug 2018 - Jun 2022**
Bachelor's of Technology, Information Technology
CGPA: 3.9/4
Courses: Operating Systems, Database Management System, Computer Networks, Cloud Computing and Artificial Intelligence

SKILLS

- Languages:** Python, C++, R, C, Java, HTML, CSS, Javascript, PHP
- Database:** MySQL, MongoDB
- Technology:** Neural Networks, Tensorflow, Pandas, PyTorch, Keras, NumPy, scikit-learn, Computer Vision, React.js, Node.js
- Tools:** MS Excel, Power BI, Tableau, Github, Azure, AWS, Matlab, Flask, Docker, Jenkins, Kubernetes, PySpark, Hadoop
- Project Management:** Jira, Asana, ConceptBoard, GitHub

EXPERIENCE

- Bio-Med Services, Inc (PrimeHealthcare)** **Aug 2024 - Present**
Generative AI Engineer
 - Built LLM-powered data pipelines (Python, PySpark) to standardize >2M GHX records using embeddings + semantic matching; hit ~95% normalization accuracy and cut downstream defects by 80%.
 - Replaced brittle scripts with tool-calling LLM agents orchestrating Selenium/PyAutoGUI to navigate Nuvia (GHX) + ERP portals; reduced manual retrieval/entry time by 75%.
 - Led a team of 5 to deliver a scalable cleanse-and-enrich framework combining SQL, Spark, and few-shot prompts/RAG for entity resolution; accelerated reporting SLA by 60%.
 - Developed a "supply-chain autopilot": Python modules exposed as LLM tools with JSON/function-calling for structured outputs kept portal ↔ DB state 100% in sync.
 - Directed LLM-assisted data migration for 4 hospital onboardings (25-person x-func team): automated catalog mapping, contract term extraction, and validation to land on schedule.
 - Authored real-time CDC/audit SQL procs and layered LLM-generated anomaly summaries + rationale, strengthening governance, traceability, and compliance.
 - Fast-tracked to Supply-Chain Team Lead; driving LLM-based SKU taxonomy mapping and contract summarization projected multi-million-\$ savings via standardized categorization and usage analytics.
- Easley-Dunn Productions, Inc.** **Aug 2024 - Mar 2025**
Software Developer
 - Led the development of a Trello-like project management tool, overseeing a team of web developers by identifying individual strengths and assigning tasks for maximum efficiency.
 - Conducted weekly sprint meetings to review progress, address roadblocks, and ensure continuous improvement in development practices.
 - Gained hands-on experience with advanced React.js concepts, including state management, component optimization, and performance tuning.
 - Evaluated and implemented optimal front-end architecture to ensure scalability, maintainability, and smooth user experience. Explored A/B testing and architectural decision-making to iteratively enhance application design and user workflows.
- Borde.io** **Jun 2024 - Aug 2024**
Full Stack Developer
 - Integrated Gravitational Teleport to enable secure, scalable remote access to multiple Linux servers, significantly improving system management and operational flexibility.
 - Developed and deployed terminal shell access within Borde Cloud Advisor, including dynamic SSH command execution and real-time health checks via Grafana.
 - Automated terminal and SSH session handling to support simultaneous device connections, reducing operational complexity and enhancing user experience.
 - Streamlined platform workflows by integrating advanced command management, contributing to improved scalability and system reliability.
- India Meteorological Department** **Jun 2020 - Jul 2022**
Software Engineer Intern
 - Our team successfully designed and implemented a cross-platform desktop application that visualizes continuous real data of various atmospheric parameters, utilizing advanced **data visualization** tools, including **Tephi, Folium, Matplotlib, and Scipy**.
 - We incorporated error correction techniques to enhance the platform's accuracy by up to 91%.
 - We worked in close coordination with the hardware team to ensure seamless system integration and presented the final demo to the stakeholders.
