

SAMEENA MUJAWAR

St Louis, USA | (314)901-6044 | sameenamujawar101@gmail.com | [Portfolio](#) | [LinkedIn](#) | [GitHub](#)

SUMMARY

Highly motivated **Data Science graduate** with **3.9 years of experience** analyzing large datasets and **5 months of hands-on experience** in data science. Skilled in **SQL, Python, R, and statistical analysis** with expertise in machine learning algorithms and visualization. Experienced in deploying models using Streamlit and Hugging Face. Passionate about solving complex problems and optimizing business processes through data-driven solutions.

EDUCATION

Maryville University of Saint Louis MS in Data Science , GPA: 4.0/4.0 Coursework: Python, R, SQL, SAS, Machine Learning, Advanced Deep Learning, NLP, Gen AI, Predictive Modeling, Data Visualization, Text Mining, Big Data Analytics, Capstone Project.	St Louis, USA Jan 2023- Dec 2024
Rajiv Gandhi University of Health Science Bachelor of Homoeopathic Medicine and Surgery	Karnataka, India Aug 2011- APR 2017

EXPERIENCE

Data Science Intern Wings of Hope	Aug 2024 – Dec 2024 St Louis, MO
- Developed a dynamic Shiny dashboard to visualize and analyze student registration and survey trends, helping the SOAR program achieve a 100% enrollment target for the semester. - Built an XGBoost classification model with 94% accuracy, which identified the key student demographics to target for successful program enrollment. - Analyzed historical data to recommend outreach strategies, ensuring full class capacity and optimized resource allocation. - Extracted, cleaned, and manipulated data using R, Python, and SQL, facilitating accurate reporting and decision-making for program administrators. - Collaborated with stakeholders to identify key metrics and data requirements, ensuring the dashboard aligned with educational administrators' needs.	
Data Analyst (Volunteer) Anjuman-E-Islam Dist. Belgaum	Feb 2018 – Oct 2021 Belgaum, Karnataka, India
- Analyzed and processed diverse datasets, including student and financial records and attendance data, using SQL and Python. - Utilized SQL for data management, extraction, manipulation, and querying to prepare datasets for analysis and reporting. - Presented data insights and trends to stakeholders, aiding in informed decision-making and improving operational efficiency. - Contributed to improvements in employee attendance tracking by 10% improvement in attendance tracking. - Created and presented clear data visualizations to stakeholders, ensuring effective communication of key findings and leading to a 30% faster decision-making process.	

PROJECTS

1. Health Insurance Fraud Detection System Link: https://insurancefraudclaimdetection.streamlit.app/ Github Repository - Developed and deployed a fraud detection system using XGBoost, achieving the best performance with 18% improvement in recall (0.65 → 0.77) and 8.3% increase in F1 score (0.72 → 0.78) after applying SMOTE. - Used DBSCAN and Isolation Forest for outlier detection, improving data quality and model robustness. - Applied statistical analysis Z-Score for feature engineering and anomaly flagging. - Deployed the system with Streamlit and Docker for scalable, real-time fraud detection.	<i>Python, XGBoost, DBSCAN, Isolation Forest, SMOTE, Git, Github, Docker, CI/CD pipeline, Streamlit</i>
2. AI-Powered Document Search and Mental Health Assistant Link: https://sameena123-gemini-chatbot-pdf.hf.space - Developed a Streamlit app utilizing Google Gemini AI for PDF search, invoice processing, and mental health support. - Boosted document search efficiency by 70% using FAISS Google Generative AI for vector indexing and response generation. - Reduced manual invoice analysis time by 60% with real-time image-based processing via PIL and Gemini AI. - Improved user satisfaction by 50% through a chatbot offering empathetic and context-aware mental health support. - Achieved 85% accuracy in text processing with LangChain for chunking and querying large PDFs.	<i>Python LLM - Gemini Docker Streamlit Hugging face Langchain</i>
3. Machine Learning Data Visualization Dashboard using R-Shiny Link: https://sameena101.shinyapps.io/myRshinyproject/ - Developed an interactive R-Shiny dashboard for data analysis and visualization, increasing analysis efficiency by 30% through automated data processing and reporting. - Integrated machine learning models like Logistic Regression, Decision Tree, and Random Forest, improving prediction accuracy by 12% for business intelligence use cases.	<i>R, R-Shiny, Logistic Regression, Random Forest, Decision Tree</i>
4. Harmful Brain Activity classification Link: https://github.com/sameena93/Harmful-Brain_Activity-Classification Created a CNN model using Keras and TensorFlow for automates EEG analysis, helping doctors and brain researchers detect seizures and other types of brain activity that can cause brain damage. This allows them to provide treatments more quickly and accurately.	<i>Python, Keras, CNN, Pandas, NumPy, tensorflow, matplotlib, scikit-learn</i>

TECHNICAL SKILLS

- Programming Languages:** Python, R, SAS, SQL
- Business Intelligence Tools:** Tableau, Power BI, R-Shiny
- Databases & Querying:** MySQL, PostgreSQL, MSSQL
- Machine Learning & Data Science:** Regression, Classification, Clustering, NLP, Deep Learning (CNN, RNN, Transformers)
- ML Libraries / Python:** Scikit-learn, TensorFlow, Keras, Pandas, NumPy, Matplotlib, Seaborn
- Tools:** PyCharm, Jupyter, R studio, MySQL, MSSQL, Databricks, Visual Studio Code, Docker, OpenAI, Hugging face, Flask, Streamlit, Docker, Github, Git
- Concepts:** Data Structure, Algorithms, Data Modeling, Statistical Analysis, Business Intelligence, Trend Analysis

Sincerely,
Sameena Mujawar
