Summary

Results-driven Software Engineer with strong foundations in computer science, data structures, and algorithms. Experienced in designing, building, and deploying scalable full-stack applications, high-quality codebases, and data-driven solutions using **Python, JavaScript, React, Node.js, and SQL**. Adept at working in fast-paced, agile environments with rapid iteration cycles, collaborating across teams, and delivering production-ready features. Passionate about solving large-scale, complex problems and creating products that impact millions of users.

Technical Skills

Languages: Python, JavaScript, C, PHP, Scala, HTML, CSS, SQL, Kotlin

Frameworks & Tools: React, Node.js, PyTorch, Git, MinIO, MQTT, Parquet, Transformers, scikit-learn

Databases/Cloud: AWS, MySQL

Core Strengths: Scalable systems, full-stack development, algorithm optimization, data analysis, agile collaboration, test-driven development, Machine Learning, NLP

Work Experience & Curriculum Activities

Project Manager

University at Buffalo

Buffalo, New York

Aug 2024 - May 2025

- Led two independent cross-functional teams through full-cycle development of original software products, overseeing vision, execution, and delivery.
- Sprint planning, task delegation, and progress tracking to ensure timely, high-quality delivery.
- Coordinated across frontend/backend workflows, ensured alignment with product goals, and maintained high code quality and UX standards, balancing scope, timelines, and feature sets

MHTechin

Software Engineer Intern

Sambhajnagar, Maharashtra, India

Jul 2023 - Sep 2023

- Developed interactive, responsive web applications in **JavaScript, HTML, and CSS**, improving user engagement and load times.
- Optimized database operations with **SQL**, reducing query execution time and improving data retrieval efficiency.
- Collaborated in daily stand-ups to align development goals, track blockers, and deliver features on schedule.

Mehra and Company

IT Support Intern

Jalna, Maharashtra, India

Sep 2020 - Aug 2021

- Investigated data issues and offered suggestions for resolution to Manager, leading to improved data accuracy and efficiency.
- Resolved network access problems for both wired and wireless connections and assisted in setting up equipment for meetings and events.
- Managed social media accounts and secured online transactions using basic security protocols, enhancing the company's online presence and transaction safety.

Projects

TruthTrace - Fake News Detection System (In Progress)

- Developing BERT-based machine learning model for automated fake news classification using Hugging Face Transformers
- Implementing end-to-end ML pipeline with data preprocessing, tokenization, and model fine-tuning on large datasets (100MB+)
- Fine-tuning BERT-base-uncased model with optimized training parameters and evaluation metrics

Handwritten Digit & Character Recognition

- Built a Convolutional Neural Network using PyTorch to recognize handwritten alphabets and digits from the EMNIST dataset, achieving 88.5% test accuracy.
- Shifted from K-Nearest Neighbors to Convolutional Neural Network for improved computational efficiency and prediction accuracy.
- Utilized Google Colab for GPU-accelerated training and Deepleak for seamless dataset integration.

Indoor Wi-Fi Based Localization and Navigation System

- Developed a Wi-Fi-based indoor navigation system for precise location tracking in complex spaces like "Davis Hall, University at Buffalo".
- Built back-end infrastructure using Python, MQTT, and MinIO to synchronize IMU, GPS, and Wi-Fi data.
- Optimized navigation with Dijkstra's algorithm and deployed efficient data pipelines in Parquet format.

Education

University at Buffalo, The State University of New York

Bachelor of Science, Computer Science
