EXPERIENCE

AI Prompt Engineer

Google | Austin, TX | January 2025 - May 2025

- Designed and deployed a Retrieval Augmented Generation system using Vertex AI, Gemini, and Google Cloud to extract and benchmark safety guidelines from unstructured compliance documents, enabling deployment at Google data centers to strengthen safety standards
- Built an end-to-end data pipeline that powered semantic search and automated policy comparisons across OSHA-defined safety categories
- Applied advanced prompt engineering techniques (multi-shot, chain-of-thought, and tree-of-thought prompting) to optimize LLM reasoning, improving guideline retrieval accuracy by 20% and reducing hallucinations by 25%
- Delivered a scalable AI driven compliance benchmarking tool that proactively identifies policy gaps, reduces manual review effort, and provides a replicable framework for safety analysis across multiple safety categories

Business Analyst

Z & N Commercial Real Estate Investment Firm | Houston, TX | June 2021 - July 2024

- Developed interactive Tableau dashboards using SQL to monitor fuel and convenience product performance, enabling targeted pricing strategies that increased gas station revenue by 20%
- Engineered Python demand-forecasting models with Scikit-learn to predict seasonal fuel and store inventory needs, reducing stockouts by 25% and optimizing reorder cycles
- Applied Python optimization algorithms to staffing and resource allocation across 15 gas stations, cutting operational costs by 15% while maintaining service coverage

EDUCATION

The University of Texas at Austin – McCombs School of Business

Master of Science, Business Analytics

- Focus on advanced analytics, machine learning, and optimization techniques to drive business insights
- Coursework Includes: Advanced Corporate Finance/Investments, Advanced Machine Learning, Optimization I & II, Financial Technology, Intro to Financial Analytics, Data Science Programming, Information Management

The University of Houston

Bachelor of Science, Biology

PROJECTS

Image-Enhanced Home Valuation Model

- Used Python, XGBoost, and ResNet-based transfer learning to combine structured real estate data with property exterior images from Southern California
- Improved home price prediction accuracy by 15% on a 15,000-property dataset and uncovered data-driven insights for optimizing real estate investments

R&D Portfolios Project

- Performed regression analyses (incorporating the Fama-French factors) in Python to estimate alphas relative to the CRSP value-weighted index, measuring statistical significance to determine excess returns
- Interpreted statistical outputs (beta, alpha, t-statistics) from multi-factor regression models to derive insights on how R&D investment affects long-term equity performance, including risk exposure and risk-adjusted returns

TECHNICAL SKILLS

- Programming & Analytics: Python, R, SQL, Excel
- Data Visualization & BI Tools: Tableau, Power BI, Alteryx, Celonis, Jira, Matplotlib, NumPy, Pandas
- Cloud & Database Technologies: AWS, Snowflake, Docker, Anvil
- Machine Learning & Forecasting: Scikit-learn, TensorFlow, Keras, PyTorch
- Business & Project Management Tools: Jira, Word, PowerPoint, Market Research, KPI Dashboards, Financial Analysis

ADDITIONAL INFORMATION

Languages: Fluent in Hindi, Urdu

Interests: Basketball, Business Strategy, Data-Driven Investing, Real Estate Analytics, Stocks

Work Eligibility: Eligible to work in the U.S. with no restrictions
