Professional Summary

Entry-Level Python Developer with a Master's in Data Science and 4+ years of combined academic and professional experience in backend development, SQL scripting, and data engineering. Skilled in Python, Flask/Django, and SQL for building, testing, and maintaining scalable applications. Strong foundation in debugging, unit testing, and REST API development, with exposure to cloud platforms (AWS, Azure) and Agile/Scrum practices. Passionate about writing clean, efficient code and eager to contribute to collaborative software development teams.

Technical Skills

Programming: Python (OOP, Flask, Django, FastAPI), SQL, R, JavaScript (basic)

Databases: PostgreSQL, MySQL, MongoDB

Tools: Git, GitHub, Jupyter, VS Code

Cloud/Other: AWS (S3, Lambda basics), Azure, RESTful API design, Agile/Scrum

Concepts: Data Structures & Algorithms, Debugging, Unit Testing, API Integration

Relevant Projects

- **Password Manager Web App** – Built a Django application with bcrypt encryption and PostgreSQL backend for secure password storage.
- **Chef Leo Recipe Generator** – Developed a Flask app that generates recipes from user-input ingredients using external REST APIs.
- **Flight Tracker App** – Designed a React + Python backend system to log and track flights from Microsoft Flight Simulator with SQL-based storage.
- **Academic Projects (Bradley University)** – Applied Python and SQL for predictive modeling, statistical testing, and API-driven data processing.

Professional Experience

Data Scientist / Developer

Comprobase Inc. — Peoria, IL (Remote)

August 2024 – Present

- Wrote and optimized Python scripts for backend automation and data integration.
- Collaborated with cross-functional teams to design and maintain SQL-based data models.
- Assisted in building APIs and dashboards to support client-facing applications.
- Participated in Agile sprints and code reviews, following Git-based version control practices.
- Documented code and workflows to support maintainability and hand-offs.

Research Assistant – Data Science and Analytics

Bradley University — Peoria, IL

August 2023 – May 2024

- Developed Python-based scripts and machine learning models for research datasets.
- Documented code and processes for reproducibility and collaboration across teams.

Data Engineer

S2Integrators — Hyderabad, India

May 2020 – April 2022

- Developed Python and SQL scripts for ETL pipelines, integrating structured and semi-structured data across multiple systems.
- Collaborated with engineers to design data workflows supporting backend applications and analytics.
- Created Power BI dashboards and automated reporting processes to improve usability for technical and business users.
- Applied debugging, testing, and version control practices to improve pipeline reliability and reduce downtime.
- Partnered with global teams in an Agile environment to deliver scalable backend solutions.

SQL Developer

Bloom Solutions Pvt. Ltd. — Hyderabad, India

September 2019 – April 2020

- Built SQL workflows, stored procedures, and triggers to improve application performance.
- Partnered with DBAs to ensure secure access and data integrity across backend systems.

Python Developer Intern

Trackmind Systems Pvt. Ltd. — Hyderabad, India

January 2019 – August 2019

- Assisted in building Python modules and scripts for client-facing applications.
- Debugged and tested backend code, improving system reliability.

Education

Masters of Science: Data Science and Analytics

Bradley University, IL, USA

Coursework: Software Development, Machine Learning, Database Management, Big Data, Data Mining, API Development

Bachelor of Engineering: Electronics and Communications *Osmania University, India*

Coursework: Programming in Python, Data Structures, Embedded Systems, AI, Neural Networks
