SUMMARY

Data Analyst with 5+ years of seasoned Data Analyst with over five years of experience specializing in healthcare and business data. Proficient in SQL, Power BI, Python, and Excel, with a strong background in designing data models, developing comprehensive reports, and analyzing data to meet both internal and external reporting needs. Well-versed in handling Protected Health Information (PHI) in compliance with HIPAA standards, ensuring data integrity and confidentiality.

TECHNICAL SKILLS

Category	Skills
Languages	SQL, Python, R, JavaScript, DAX
Big Data	Hadoop, Apache Spark, BigQuery
ETL/ELT Tools	Apache Nifi, Talend, Informatica, SSIS
Database	SQL Server, Snowflake, MySQL, PostgreSQL, MongoDB
Data Modeling	Dimensional Modeling (Star Schema, Snowflake Schema), Entity-Relationship (ER) Modeling, OLAP Cubes, Data Lineage and Data Mapping
Tools/ IDE/ Build Tools	Jupyter Notebooks, PyCharm, Visual Studio Code (VS Code), IntelliJ IDEA, Git
Cloud Computing	AWS, Google Cloud Platform (BigQuery), Microsoft Azure
Data Analytics Skills	Exploratory Data Analysis (EDA), Predictive Modeling, Statistical Analysis (Regression, Hypothesis Testing), Time-Series Forecasting, Data Mining, Anomaly Detection, A/B Testing
Digital Ocean	DigitalOcean (Droplets, Databases)
Version Control	Git, GitHub, GitLab
BI & CRM Tools	Tableau, Looker, Power BI, Domo, QlikView
Packages	Pandas, NumPy, Scikit-learn, Matplotlib, Seaborn, TensorFlow
File Formats	CSV, Excel (.xls, .xlsx), JSON, Parquet, XML
Operating System	Windows, macOS, Linux

PROFESSIONAL EXPERIENCE

Integrus Health

Data Analyst

Oklahoma, OK

Dec 2022 – Present

- Collaborated with healthcare managers to gather requirements and perform process analysis, ensuring efficient data workflows and reporting for healthcare operations.
- Designed and implemented a star schema to create a KPI store database for tracking healthcare metrics using MS SQL Server and Erwin Data Modeling.
- Analyzed patient and operational data from healthcare systems stored in AWS S3, AWS Redshift, Snowflake, and Teradata, leveraging SQL, Python, Spark, and Databricks for insights.
- Created Python scripts for data mining and validation, reducing manual effort by 40%.
- Utilized SQL and Python to extract, clean, and transform large-scale network data from multiple sources.
- Automated the claims dispute resolution process, reducing manual intervention by 35%.
- Deployed cloud-based data storage solutions using AWS and Google Cloud Platform (BigQuery) for scalability and reliability in processing large datasets.
- Led the integration of data quality metrics into Power BI reports, enabling real-time monitoring and visualization of data accuracy and completeness.
- Automated data engineering tasks and pipeline orchestration through scripting in Bash, PowerShell, and Python, and integrated Terraform with CI/CD pipelines for streamlined deployments
- Developed real-time data processing applications using Spark Streaming and Kafka to handle high-frequency data, ensuring timely insights for fraud detection and business operations.
- Created ETL scripts using T-SQL queries, Views, Stored procedures and functions.
- Ensured data access adhered to the minimum necessary standard under **HIPAA** guidelines by de-identifying sensitive patient information before analysis.

Merizon Technologies India

Data Engineer

Hyderabad, India

May 2020 - Jun 2022

- Used Hive SQL, Presto SQL and Spark SQL for ETL jobs and using the right technology for the job to get done.
- Developed SSRS reports, SSIS packages to Extract, Transform and Load data from various source systems
- Having experience in developing a data pipeline using Kafka to store data into HDFS.
- Measured Efficiency of Hadoop/Hive environment ensuring SLA is met
- Optimized the Tensor Flow Model for efficiency
- Automated **ETL** pipelines using Python, reducing data processing time by **30%**s
- Supported automation efforts by setting up pipelines and testing frameworks, improving overall system performance.
- Created ad hoc queries and reports to support business decisions SQL Server Reporting Services (SSRS).
- Wrote various data normalization jobs for new data ingested into Redshift.
- Defined facts, dimensions and designed the data marts using the Ralph Kimball's Dimensional Data Mart modeling methodology using Erwin.
- Created various complex SSIS/ETL packages to Extract, Transform and Load data Was responsible for ETL and data validation using SQL Server Integration Services.
- Defined and deployed monitoring, metrics, and logging systems on AWS.
- Automated data cleaning and preprocessing tasks with Python, reducing manual work and enhancing data quality for analysis, contributing to faster decision-making
- Connected to Amazon Redshift through Tableau to extract live data for real time analysis.
- Implemented Work Load Management (WML) in Redshift to prioritize basic dashboard queries over more complex longer running adhoc queries. This allowed for a more reliable and faster reporting interface, giving sub-second query response for basic queries.
- Wrote calculated columns, Measures query's using DAX in Power BI to show good data analysis techniques.
- Implementing and Managing ETL solutions and automating operational processes.
- Optimizing and tuning the Redshift environment, enabling queries to perform up to 100x faster for Tableau and SAS Visual Analytics.

Accenture

Data Analyst

Hyderabad, India

Nov 2019 - Mar 2020

- Worked in an Agile Development environment, collaborating with cross-functional teams to enhance the anomaly detection process for network traffic analysis.
- Utilized SQL and Python to extract, clean, and transform large-scale network data from multiple sources.
- Applied Predictive Modeling techniques using Scikit-learn and TensorFlow to develop machine learning models for network traffic anomaly detection.
- Conducted Exploratory Data Analysis (EDA) using Pandas and NumPy to identify trends and potential issues in network traffic behavior.
- Implemented Dimensional Modeling (Star Schema) and Entity-Relationship (ER) Modeling to optimize data storage and reporting for security analysis.
- Deployed cloud-based data storage solutions using AWS and Google Cloud Platform (BigQuery) for scalability and reliability in processing large datasets.
- Utilized Git for version control and Jupyter Notebooks for reproducible data analysis, model development, and visualization
- Implemented SQL Server OLAP services (SSAS) for building the data cubes.
- Maintained the table performance by following the tuning tips like normalization, creating indexes and collect statistics.
- Experienced in working with DAX commands to pull up more calculated data out of the tables.
- Created queries using DAX functions in Power BI desktop Expertise in using advanced level calculations on the data set.
- Created KPI's, Partitions, Perspectives, and Calculated Measures, used DAX queries, Roles.

CERTIFICATIONS**AWS Certified Solutions Architect – Associate****EDUCATION****University of Dayton**

Master of Science: Computer Science

Dayton, OH

May 2024

Jawaharlal Nehru Technological University Hyderabad

Bachelor of Science: Computer Science

Hyderabad, India

May 2019
