Objective

Motivated and analytical Data Science graduate student with 1 year and 7 months of professional experience working on large-scale data processing and reporting systems. Proficient in Python, SQL, and statistical methods, with hands-on experience in data cleansing, transformation, and predictive modeling. Adept at working with structured data, developing ETL pipelines, and delivering actionable insights through visualization tools. Eager to apply advanced data science techniques to solve complex problems and drive data-driven decision-making.

Education

University at Albany, SUNY

Master of Science in Data Science

Albany, NY

Aug 2023 – May 2025

GPA: 3.68/4.0

Relevant Coursework: Data Mining, Machine Learning, Database Systems, Statistical Computing with R

Christu Jyothi Institute of Technology and Science

India

Bachelor of Technology in Electronics and Communication Engineering

Aug 2019 – May 2022

GPA: 7.25/10

Technical Skills

Languages: Python, Java, SQL, JCL, COBOL, R

Tools & Technologies: IBM Mainframe Utilities, ESP Scheduler, Power BI, SSRS, Tableau, Git, MS Excel

Databases: Oracle, SQL Server, PostgreSQL, DB2

Data Science & Analytics: Data Extraction & Transformation, ETL Pipeline Monitoring, Statistical Analysis, Data Wrangling, Clinical Data Processing, Predictive Modeling

Concepts: Workflow Automation, Data Quality Assurance, Reporting & Visualization, Batch Job Scheduling

Professional Experience

Wipro Ltd

Hyderabad, India

Software Engineer

May 2022 – Aug 2023

- Developed and maintained clinical and health data workflows and job schedules on IBM Mainframe environments using JCL and COBOL, supporting intake, triage, and operational efficiency.
- Collaborated with cross-functional teams to gather reporting requirements and designed SQL-based extracts and operational reports for performance monitoring and staff productivity.
- Managed data collection, validation, and cleansing processes to ensure accuracy and consistency of patient and workforce data across systems.
- Created and maintained user documentation and support tools to help clinical teams and managers make informed decisions based on data-driven insights.
- Supported real-time data validation and batch monitoring using ESP Scheduler and COBOL modules, ensuring timely processing of patient and employee performance data.
- Assisted in resolving data integration issues and adjusted data extracts by analyzing report anomalies, addressing duplicates, and optimizing batch job outputs.
- Participated in testing and validation of data outputs to align with departmental goals for improved patient outcomes and service delivery.

Projects

Stochastic Analysis of Environmental Image Data

Python, NumPy, OpenCV

Preprocessed and analyzed noisy satellite image data using statistical and stochastic techniques to detect patterns and trends.

Customer Segmentation using Clustering

Python, K-means, PCA

Segmented customer data using clustering algorithms; identified behavioral patterns for marketing strategies.

Certifications

- Web Development – Internshala
- Embedded Systems & PCB Design – Match Well Technologies

Leadership and Activities

Data Science Club – University at Albany

Actively engaged in hackathons and workshops focused on exploratory data analysis, automation, and predictive modeling.
