

# Sandeep Reddy Kowkuntla

Java Full Stack Developer

LinkedIn: [www.linkedin.com/in/sandeep-reddy-kowkuntla07/](https://www.linkedin.com/in/sandeep-reddy-kowkuntla07/)

Email: sandeepkowkuntla.work@gmail.com | Phone: +1 832-305-6746

## Professional Summary

- Over 5 years of experience as a Java Full Stack Developer with expertise in developing scalable, enterprise-grade web applications.
- Proficient in Java 11/8, **J2EE**, **JSP**, **Servlets**, **EJB**, and Spring Framework (Spring Boot, **MVC**, **AOP**, **ORM**, **DAO**, **Security**).
- Strong expertise in **Microservices** architecture, **RESTful** and **SOAP** Web Services, and **SOA-based** applications.
- Experienced in UI development using **AngularJS**, **Angular 2/4/11/13**, **React.js**, **Node.js**, **RxJS**, and **jQuery**.
- Skilled in **HTML5**, **CSS3**, **DHTML**, **JavaScript**, and **XML** for responsive and interactive user interface development.
- Hands-on with **Hibernate**, **iBatis**, **MyBatis** for **ORM** and data persistence in multi-tier applications.
- Proficient in messaging and integration tools such as Apache Camel, **JMS**, **ActiveMQ**, **RabbitMQ**, and **Kafka**.
- Extensive experience with **SQL**, **PL/SQL**, and working on relational and **NoSQL** databases like **Oracle**, **MySQL**, **PostgreSQL**, **DynamoDB**, **Couchbase**, **Cassandra**, and **MongoDB**.
- Familiar with development environments and tools like IntelliJ IDEA, Spring Tool Suite (**STS**), **Eclipse**, **TOAD**, and **WSAD**.
- Competent in writing and executing test cases using **JUnit** and **Selenium** for unit and UI automation testing.
- Proficient in using build tools like **Maven**, **Ant**, **Hudson**, **Fusion**, **Jenkins**, and **OneOps** for continuous integration and deployment.
- Skilled in containerization and orchestration using **Docker**, **Kubernetes**, and deployment automation using **Ansible**.
- Experience working with **AWS** Cloud Services including EC2, **S3**, **RDS**, **Lambda**, **SQS**, **IAM**, **CloudWatch**, and **EBS**.
- Exposure to Google Cloud **Platform (GCP)** for hosting and managing cloud-native applications.
- Developed and integrated multiple **RESTful** APIs using Spring Boot and secured them using **OAuth2** and Spring **Security**.
- Well-versed in **Agile/Scrum** development methodologies and capable of working in fast-paced, collaborative environments.
- Adept at requirement analysis, system design, implementation, and delivering high-quality code with best practices.
- Strong communication and teamwork skills with a continuous learning mindset and passion for innovation.

## Technical Skills

|                            |                                                                                                                                                             |
|----------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Languages/Platforms</b> | Java 11, Java v1.8, JSP, J2EE, SQL, DHTML, JavaScript, Python                                                                                               |
| <b>Framework/Libraries</b> | Spring, iBatis, Mybatis, Struts, Hibernate, Log4j, JBOSS, Spring Boot, Microservices                                                                        |
| <b>Web Technologies</b>    | JSP, Servlets, AngularJS, Angular2/4/11/13, jQuery, React.JS, Node.JS, EJB, RxJS, Hibernate, Struts, Spring, JDBC, HTML5, DHTML and XML, CSS3, Web Services |
| <b>IDE/Tools</b>           | IntelliJ IDEA 2018.2.3 (Ultimate Edition) STS (Spring Test Suite), Eclipse v3.5, TOAD v7.5, WSAD v5.0                                                       |
| <b>Messaging</b>           | JMS, Apache Camel, ActiveMQ, RabbitMQ, Kafka                                                                                                                |
| <b>SOA/ Web Services</b>   | RESTful, SOAP                                                                                                                                               |
| <b>Database</b>            | Oracle, MySQL, PostgreSQL, DynamoDB, Couchbase, Cassandra, MongoDB, PL/SQL.                                                                                 |
| <b>Testing</b>             | JUnit, Selenium                                                                                                                                             |
| <b>Project build tools</b> | Ant, Maven, Hudson, Fusion, Jenkins, OneOps                                                                                                                 |
| <b>Cloud Services</b>      | Amazon (EC2, S3, RDS, Lambda, SQS, IAM, CloudWatch, EBS), Docker, Ansible, Kubernetes, GCP.                                                                 |

## Professional Experience

Client: Cetera, Coppel, TX

Dec 2024 – Present

Role: Full Stack Java Developer

### Responsibilities:

- Contributed to the development and optimization of software subsystems and cloud-based backend components using **Java 11** and **Python**.
- Translated high-level system architecture into clean, efficient code using design patterns and layered architecture.
- Resolved major Coverity static code scan violations, including null pointer dereferencing, enhancing code stability and security.
- Developed and maintained RESTful **APIs** using **Spring Boot** and **Spring MVC**, documented through **Swagger**, to support cross-functional teams.
- Led the transformation of monolithic legacy modules into microservices aligned with **12-factor** app principles for better scalability and maintainability.
- Created asynchronous, reactive services using **Spring Web Flux** and **RXJava** backed by **Couchbase** for real-time data flow.
- Integrated front-end **Angular 11+** applications with RESTful **APIs** using **RxJS** to handle real-time data and observable streams.
- Collaborated with **Salesforce** developers to manage field-level access control and data integrity in case management modules.
- Automated end-to-end testing using **Selenium WebDriver** and integrated test execution within **Jenkins** CI pipelines.
- Leveraged **Google Cloud Pub/Sub** and **Cloud Functions** for implementing serverless event-driven workflows.
- Authored deployment automation scripts in **Python** to streamline the deployment of Java SE 11 applications on **Ubuntu**-based environments.
- Engineered efficient data structures and algorithms for critical application logic using Java and **Python**.
- Integrated **PostgreSQL** and **MongoDB** with Angular front ends to perform advanced client-side and server-side validations.
- Designed **Kafka** producers/consumers for real-time messaging and performed distributed streaming using **Apache Camel**.
- Built reusable Java components and configured messaging queues (**ActiveMQ**, **RabbitMQ**, **Kafka**) to support asynchronous communication.
- Created and optimized **PL/SQL** stored procedures, functions, and triggers for transactional database operations in **Oracle** and **MySQL**.
- Refactored and maintained large Angular codebases, successfully migrating apps from **Angular 11** to **Angular 13** with SSR using **Angular Universal**.
- Incorporated **Angular CDK** for component-level UI enhancements and introduced **lazy loading** to improve performance and resource usage.
- Provisioned and managed **GCP** services including **Compute Engine**, **GKE**, **Cloud SQL**, and **Cloud Storage** to support production workloads.
- Built scalable **CI/CD** pipelines using **Cloud Build** and **Cloud Source Repositories**, automating testing and container image builds.
- Managed **Docker** container orchestration through **GKE** and applied **Terraform/Ansible** for repeatable infrastructure provisioning.

- Enabled full-stack observability with **GCP Stack driver**, automating error tracking and enhancing operational diagnostics.
- Implemented and fine-tuned **MongoDB** schemas and indexing strategies to optimize NoSQL data access patterns.
- Collaborated in Agile/**Scrum** teams, participating in sprint planning, demos, retrospectives, and daily stand-ups for feature delivery.

**Environment:** Java 11, Spring Boot, Spring Web Flux, Angular 11/13, RXJS, Couchbase, PostgreSQL, MongoDB, Cassandra, Python, Selenium, Jenkins, Kafka, Apache Camel, Maven, GCP (GKE, Cloud SQL, Pub/Sub, Stack driver), Docker, Ansible, Terraform, ActiveMQ, RabbitMQ, Swagger, JUnit, Protractor, TestNG, Rally, Scrum.

**Client:** Corpay, Atlanta, GA

**Dec 2023 – Nov 2024**

**Role:** Full Stack Java Developer

**Responsibilities:**

- Designed and delivered robust and maintainable Java-based applications by contributing to the full software development lifecycle.
- Engaged in end-to-end implementation of new modules and upgrade efforts on legacy applications with a focus on usability and scalability.
- Developed reusable **TypeScript** components and services following **Angular 4**'s component-driven architecture for **RESTful** API integration.
- Built UI elements and dynamic pages using ReactJS with a strong focus on component reusability and responsive design.
- Constructed front-end interfaces using technologies like Servlets, **JSP**, **JSF**, **JSTL**, **HTML5**, **CSS3**, **JavaScript**, and **GWT** to enhance user experience.
- Utilized **AngularJS**, jQuery, and **Node.js** for interactive front-end features, consuming **REST** APIs for CRUD operations.
- Set up a secure VPC architecture on **AWS** Cloud with public/private subnets and Elastic Load Balancers to support enterprise-level services.
- Implemented core **AWS** services including **EC2**, **S3**, **RDS**, and Auto Scaling Groups to achieve high availability and fault tolerance.
- Managed project builds and deployments using **Maven**, integrated with **WebLogic** for server-side application execution.
- Handled back-end data processing using **Hibernate** ORM and performed complex SQL operations across relational databases.
- Developed single-page applications using **Angular 4** and 6 along with **Bootstrap**, **HTML5**, and **CSS3** for adaptive interfaces.
- Built user-centric modules including admin dashboards and personalized homepage sections using **Spring** Core, **JSP**, **My Batis**, **Hibernate**, and XSLT.
- Used **JAX-RS** to develop **RESTful** web services and handled XML/**JSON**-based requests and responses for external integrations.
- Created **PL/SQL** stored procedures and triggers in **Oracle** for handling business logic within database operations.
- Used **Kafka** for distributed messaging to enable asynchronous communication between microservices.
- Deployed containerized Spring **Boot** microservices into **AWS ECS** and managed infrastructure with **AWS CloudFormation**.
- Built **Spring** Data **JPA** repositories and exposed **REST** APIs for Account Management microservices using Spring **Boot**.

- Automated deployment and system configuration using **Ansible** playbooks and roles across multiple client environments.
- Managed container lifecycle and cluster orchestration using **Kubernetes** for scalability and service discovery.
- Deployed Java SE 11 applications into Apache Tomcat, supporting continuous delivery for development teams.
- Worked with **Java 11** features, including the new file I/O methods, to process and manipulate file-based data inputs.
- Implemented database transactions and persistence logic using **MongoDB** and **Mongoose** in a **Node.js** environment.
- Operated in a **CI/CD** pipeline with tools such as **Jenkins**, **Terraform**, and **Maven** to streamline delivery and deployment.
- Set up **SQL Server** databases for test environments and seed them with test data using automated scripts.
- Developed **Ansible** scripts leveraging shell, cloud, and command modules for cloud infrastructure automation.
- Performed root cause analysis and application performance profiling while building **Selenium**-based automation scripts with **TypeScript** and **Protractor**.
- Participated in Agile ceremonies and sprint reviews, maintained storyboards, and resolved blockers through collaboration.

**Environment:** Spring Boot, AWS Lambda, Angular 4/6, Selenium, EJB, ReactJs, Protractor, TypeScript, MongoDB, Oracle, REST, HTML, JSP, Java 11, Kafka, JSF, MuleESB, Ansible, Agile, Bootstrap, SQL Server, Kubernetes, Jenkins, UML, Struts, Microservices, Confluence, JSON, AJAX, Docker, Spring, AngularJS, IBM WebSphere Application Server, JAX-RS, Git, CSS3, JIRA, Node.js, Hibernate, Maven.

**Client:** Matrix Solutions, Hyderabad, India

**July 2021 – Aug 2023**

**Role:** Java Developer

**Responsibilities:**

- Worked on enterprise application development using **Core Java**, **J2EE**, and layered architecture involving **Spring**, **Struts**, and **Hibernate** frameworks.
- Contributed to all phases of the SDLC, including planning, UI/UX design, development, testing, and production deployment.
- Implemented rich and dynamic front-end components using **Angular 2.0**, **HTML5**, **CSS**, **Bootstrap**, and **JavaScript**.
- Built web application prototypes with **AngularJS** and **JavaScript** for rapid client-side rendering.
- Used **Angular UI Router** to manage nested views and client-side routing across application modules.
- Developed reusable Angular components using directives, services, and partial templates in **Angular 2/4**.
- Designed user interfaces using **Bootstrap** and **Angular-UI**, handling responsive layout and cross-browser compatibility.
- Developed and consumed **RESTful APIs** using **Spring MVC**, returning data in **JSON** for interaction with the front-end.
- Built and tested microservices using **Spring Boot** and configured dependency injection via **Spring Core Annotations**.
- Interfaced with **AWS EC2** services to integrate cloud-based infrastructure for application deployment.
- Utilized **Spring MVC** and **Spring Boot** to establish backend service layers under the classical MVC design.
- Deployed microservices into **Pivotal Cloud Foundry (PCF)**, ensuring high availability and fault-tolerant systems.
- Automated build and deployment processes using **Jenkins**, **AWS Code Deploy**, and **OpsWorks**.
- Used **Ansible** to manage infrastructure configuration and automate server provisioning for deployment environments.
- Created and executed unit tests using **JUnit**, **Mockito**, and configured **Log4j** for application monitoring and debugging.

- Modeled application logic with **UML** diagrams, including use case and class diagrams for better code structuring.
- Used **Jasmine** and **Karma** for unit testing Angular modules ensuring modular code quality.

**Environment:** Java, Spring 4.0, Angular 2/4, HTML5, Bootstrap, CSS, Node.js, Hibernate, Spring Boot, Docker, Apache 7.0, Karma, Jasmine, Spring Batch, Maven, AWS EC2, Microservices, Rest web services, Ansible, JIRA, Eclipse Kepler, MySQL, XML, Log4j, Struts, AngularJS, Mockito, UML, Pivotal Cloud Foundry (PCF), Jenkins.

**Client:** Meta minds, Hyderabad, India

**Feb 2020 – June 2021**

**Role:** Software Developer

**Responsibilities:**

- Participated in the full **SDLC** involving requirement analysis, application design, backend development, and testing of enterprise systems.
- Engineered Java-based APIs tailored to business requirements by utilizing **Core Java**, **OOP**, data structures, and algorithmic approaches.
- Created **RESTful APIs** for dynamic web store components using **Java** and the **Spring** framework.
- Designed and developed front-end functionality using **ReactJs**, **HTML**, **CSS**, **JavaScript**, and **jQuery**.
- Applied object-oriented design and software engineering practices to implement modular and reusable code.
- Built backend business modules leveraging **Spring** and **Hibernate** frameworks for data persistence and service orchestration.
- Developed backend services with **J2EE**, focusing on **Spring JDBC**, **EJB**, and integration of middle-tier services.
- Interfaced with services using **XML**, **XSD**, and **JSON**, employing **JMS** for application communication and **MQ** for third-party integration.
- Implemented domain-level business logic using **Java Beans**, enhancing maintainability and separation of concerns.
- Wrote optimized **SQL queries**, supported data modeling, and participated in **database schema design** and master data management.
- Authored **Ant** and **Maven** scripts for project builds and deployments across environments.
- Monitored and improved codebase quality using **SonarQube** for static analysis and ensured test coverage with **JUnit**.
- Utilized ORM tools like **Hibernate**, **iBatis**, and applied MVC frameworks like **Spring MVC** and **Struts 2**.
- Integrated with external services using **SOAP** and **RESTful** web services, enabling secure data exchange.

**Environment:** JDK 1.6, Spring MVC 4.1.5, XML, Java Beans, RESTful APIs, EJB 3.0, Hibernate ORM, ReactJs, HTML5, CSS, JavaScript, Spring JDBC, JBoss Server, JBoss Studio, JSON, Maven, Ant, JIRA, JUnit, MQ, JMS, Log4j, SVN, Windows OS, Struts 2, iBatis.
