PROFESSIONAL SUMMARY

Skilled Full Stack Java Developer specializing in AWS infrastructure with extensive experience in Java-based applications and IT project management for 5 years. Proficient in maintaining and developing cloud solutions, implementing Infrastructure as Code, and optimizing security measures. Adept at collaborating with cross-functional teams to drive continuous improvement and technical excellence in compliance environments. Committed to leveraging robust technical support and innovative problem-solving skills in fast-paced, Agile settings.

SKILLS

- | | |
|--|---|
| • Programming Languages: | Java8, Groovy, Python, JavaScript, NodeJS |
| • Web Technologies: | HTML5, CSS3, Servers, JSP |
| • Frameworks: | Spring Boot, Maven, Spring MVC, Microservices, Django, Angular |
| • Database Management: | SQL, DBMS, MySQL, JDBC, PL/SQL, Oracle |
| • Cloud Technologies: | AWS (EC2, S3, Redshift, Athena, Glue, Data lakes, EMR, Kinesis), AWS Lambda, Serverless Computing |
| • Containerization and Orchestration: | Docker, Kubernetes |
| • DevOps and Automation Tools: | Jenkins, Git, GitHub Actions, Terraform, CloudFormation |
| • CI/CD and Version Control: | Git Lab, Git Hub, Continuous Integration/Continuous Deployment (CI/CD), AWS CodePipeline |
| • Operating Systems and Scripting: | Linux, Windows, Bash Scripting |
| • Event-Driven Architectures: | Kafka, SNS, SQS |
| • Monitoring and Analytics Tools: | Kibana, Prometheus, Grafana, AWS CloudWatch |
| • Agile and SDLC Practices: | Agile Methodology, Scrum, DevOps |
| • Collaboration and Project Management: | ServiceNow, Jira |

EXPERIENCE

AgilePath Inc

Java Developer

Aug 2024 - Present

West Des Moines, Iowa, United States

- Built and maintained reliable and scalable **Java** backend services and **APIs**, ensuring optimal performance and security, which improved system efficiency
- Authored well-structured, extensible code along with unit and integration tests, maintaining high software quality and reducing bugs
- Collaborated with cross-functional teams, including front-end developers, **DevOps** engineers, and product managers, to streamline project workflows and enhance team productivity
- Developed and integrated responsive front-end components using **Angular**, enabling dynamic user interfaces and improving the overall user experience
- Automated infrastructure provisioning using **Terraform** and **AWS CloudFormation**, reducing manual deployment efforts.
- Contributed to technical documentation, ensuring clarity and maintainability of project components, which improved team understanding and project consistency
- Monitored application performance using **AWS CloudWatch**, optimizing cloud resources and improving system reliability.
- Assisted in task breakdown, system design, and infrastructure automation using Infrastructure as Code and **CI/CD** pipelines, which streamlined operations and reduced deployment time
- Supported database development and optimized **SQL/NoSQL** queries, enhancing performance and reducing query execution time

Virtusa Consulting Services Pvt Ltd

Engineer-Technology

Sep 2021 - Jul 2023

Chennai, Tamil Nadu, India

- Successfully developed and deployed multiple high-traffic applications for British Telecommunication, enhancing user experience and operational efficiency.
- Developed **Java applications** and front-end interfaces using **JavaScript, HTML, and JSP**, improving application performance and user interaction
- Deployed Java-based microservices on **AWS ECS with Fargate**, enhancing application scalability and reducing operational overhead.
- Wrote queries in **Domain-Specific Language (DSL) or Kibana Query Language (KQL)** to filter, aggregate, and extract meaningful data for **Kibana dashboards**, leading to more insightful data analysis
- Investigated and troubleshoot issues using **logs, metrics**, and other observability data, ensuring system reliability and reducing downtime
- Migrated legacy applications to Microservices using **Spring Boot**, ensuring smoother integration and improved maintainability
- Implemented Groovy scripts to automate repetitive tasks, significantly reducing manual efforts and increasing productivity.
- Utilized strong knowledge of **DBMS and SQL** to manage databases efficiently, applying **DevOps** practices and using **Git** for version control to enhance project delivery
- Solved complex problems by collaborating within cross-functional teams, continuously improving processes to enhance team efficiency and project outcomes

Virtusa Consulting Services Pvt Ltd

Associate Engineer

Aug 2020 - Sep 2021

Hyderabad, Telangana, India

- Created and maintained **Java-based** applications for Citi Bank, guaranteeing optimal performance and dependability.
- Used **Resolve** Tool to successfully track issues and manage project activities for the Citibank project.
- Designed and built **SQL** databases to provide application functionality while ensuring data integrity.
- Managed projects with **Jira**, collaborating with cross-functional teams to track progress and fulfill deadlines.
- Implemented **Git** version control to ensure code integrity and collaborative development.
- Collaborated with top engineers and Citi Bank stakeholders to understand requirements and deliver timely solutions, enhancing project alignment and client satisfaction
- Participated in code reviews and contributed to the ongoing enhancement of coding standards.
- Implemented **AWS CI/CD pipelines** using **AWS CodePipeline, CodeBuild, and CodeDeploy** to streamline software releases.
- Worked with **Docker** to containerize applications and ensure consistency across environments.
- Built flexible and maintainable apps using the **Microservices** architecture, which improved scalability and ease of updates

CloudGate Systems India

Sep 2019 - Jul 2020

Internship

Hyderabad, Telangana, India

- Developed and maintained online applications with **Java** and the **Spring** framework, improving functionality and performance.
- Utilized **Maven** for project build management, ensuring effective dependency management and improving project organization
- Collaborated with cross-functional teams, including front-end developers and quality assurance engineers, to produce integrated solutions.
- Participated in code reviews and provided input, which improved code quality and team learning.
- Participated in the development of **RESTful APIs**, which connect front-end applications to back-end services.
- Improved application security by implementing authentication and authorization procedures, resulting in increased protection against unauthorized access

EDUCATION

University of Central Missouri

2023 - 2024

Master of Science, Computer Information System

Vellore Institute of Technology

2015 - 2020

Bachelor of Technology, Integrated Software Engineering

Velammal Matriculation Higher Secondary School

2013 - 2015

High School, Computer Science

PROJECT

Improving Web Page Access Prediction using Web Usage Mining and Web Content Mining

User's search intention can be captured by considering the web page content and also by using the search patterns and logs stored.

The rankings of the URLs are generated by using tf-idf algorithm and based on the score the search results are populated to the user on the UI.

Technologies: **Python, Django, MySQL, HTML, CSS, JS.**
