PROFESSIONAL SUMMARY – Data & Business Analyst with 7+ years of experience delivering financial and product insights through SQL, Python, and BI tools. Led the creation of a centralized KPI dashboard that cut manual reporting time by 30% and built a data model supporting 20+ products, enabling faster performance tracking. Established a single source of truth for enterprise metrics across 315+ branches, improving data accuracy and informing executive decisions. Seeking to apply analytical expertise to drive data-backed strategies and measurable business growth.

WORK EXPERIENCE

Data Analyst | MasIT Labs

Sep 2025 - Present

- Owned a defined subset of **20+ products and business KPIs**, translating ambiguous stakeholder questions into **SQL and Python** analytical workflows that enabled more accurate planning and performance tracking for senior leadership
- Contributed to an internal AI decision-support chatbot by curating and validating **100K+ row datasets** and testing prompts across multiple analytical scenarios to improve response relevance
- Built automated dashboards monitoring operational performance, data quality, and project health, reducing manual reporting effort by **25–30%**
- Partnered with product and **multiple teams** to document metric definitions, edge cases, and data sources, improving consistency and shared understanding across teams

Business Data Analyst Intern | The State University of New York at Buffalo

Jan 2025 - May 2025

- Built forecasting and regression models using Azure Databricks and Postgres on 1M+ freight records, uncovering key cost drivers and enabling more accurate pricing and optimization decisions
- Designed and automated ETL workflows and Power BI dashboards, improving data freshness and reducing manual processing errors and delays
- Defined and tracked financial KPIs (cost-to-revenue ratio, ROI, budget variance) to surface spend anomalies and support faster, data-backed budget decisions
- Conducted hypothesis-driven statistical and root-cause analysis to evaluate pricing strategies and inform executive-level recommendations

Data Analyst – Global Analytics Team | Bank of Baroda

Jul 2021 - Jun 2024

- Established a unified KPI repository using **Power BI and advanced Excel**, delivering consistent metrics to 315+ branches for monthly reviews and portfolio decisions
- Built scalable SQL models and Power BI semantic layers for budget pacing, variance analysis, and portfolio monitoring, replacing static reports with interactive analytics
- Analyzed direct channel performance and loan risk using SQL, Python, and cohort analysis, influencing acquisition mix decisions and driving a **12% improvement**
- Led UAT across **45+ stakeholders and 120+ test cases**, ensuring data accuracy, workflow correctness, and platform adoption
- Migrated **400K+ records** from FoxPro/Excel into a centralized SQL warehouse, reducing reporting errors from ~5% to near zero and improving data reliability
- Defined KPI logic, metric documentation, and validation rules to ensure audit readiness, data governance, and sustained trust in leadership reporting
- Collaborated with the project manager to manage the projects simultaneously, and led stakeholder workshops and documentation sessions, ensuring alignment with technical teams and branch operations.
- Drove analytics adoption by training branch managers and regional teams on Power BI dashboards (RLS, scheduled refreshes), increasing self-service usage and reducing ad-hoc reporting requests, saving **40+ analyst hours per month**

Junior Data Analyst – Reporting and Data Quality | Bank of Baroda

Aug 2017 - Jun 2021

- Analyzed portfolio and cross-sell behavior using core banking data to identify growth opportunities, contributing to a **15% increase in retail loan sales**.
- Built standardized KPI frameworks for MoM, QTD, and YTD performance reviews, improving decision visibility and metric consistency across leadership levels.
- Automated recurring data preparation, validation, and reporting workflows, reducing turnaround time by **30–40%** and minimizing manual errors.
- Partnered with regional and executive leadership to translate portfolio performance data into actionable insights and recommendations used in monthly and quarterly planning discussions

EDUCATION

Master of Science in Business Analytics | (GPA 3.9/4.0)

May 2025

The State University of New York at Buffalo, US

Bachelor of Technology in Information Technology

May 2017

Anna University – Chennai, India

TECHNICAL SKILLS

- Languages & Libraries:** Advanced SQL (CTEs, window functions), Python (Pandas, Numpy, Scikit-learn), R (tidyverse, ggplot2)
- Business Intelligence tools:** Power BI (DAX, Power Query), Tableau, Advanced Excel (VLOOKUP, Pivot Table, Power Pivot, VBA, Macros), Looker Studio, Qlik Sense
- ETL & Cloud:** Azure Databricks, Oracle Cloud, Postgres, SQL Server, Apache Airflow, PySpark
- Statistics & ML:** A/B Testing, Hypothesis testing, Chi-Square Test, ANOVA, T-Test, Linear Regression, Logistic Regression, K-Means Clustering, K-Nearest Neighbors
- Analytics & Delivery Methods:** Data Governance, KPI Reporting, Agile (Kanban, Scrum), JIRA, Visio, Confluence, Git, UAT Testing, Documentation

ACADEMIC & INDEPENDENT PROJECTS

ACSIC (Accelerated Clinical Insight Platform) – Azure Databricks, AI/BI Genie Space, Databricks SQL, FHIR Data, HL7 & HIPAA Compliance [link](#)

- Implemented medallion architecture and governed ETL workflows and KPI dashboards on 10K+ clinical and operational datasets across to support healthcare reporting

Financial KPI Intelligence Platform - API Integration- Oracle Cloud Data Warehouse -Oracle SQL- Apache Airflow -Power BI [link](#)

- Built end-to-end analytics to address multi-sector performance, ingesting **SEC filings (10-K/10-Q)** via APIs into Oracle Cloud Data Warehouse using Apache Airflow.
- Modeled **star and snowflake schemas**, defined KPIs ensuring role-based access controls, enabling drill-down self-service analysis, and reducing manual tracking by **75%**.

Analyzing Market Sentiments – Artificial Intelligence/Machine Learning (NLP), Hugging Face, BeautifulSoup, Python & Power BI

- Developed an NLP pipeline on **10,000+ financial news articles** to quantify sentiment scores and test hypotheses linking news tone to stock movement of (Tesla, NVIDIA, Microsoft), to support data-driven investment hypotheses, achieving **~60% predictive accuracy**.
