## PROFESSIONAL SUMMARY

Dynamic Software Engineer with over six years of experience in end-to-end software delivery and cloud implementations. Adept at leveraging Java, AWS, and modern frameworks like Spring Boot to build scalable, secure, and efficient systems. Demonstrates expertise in cloud-native development, utilizing Terraform, Kubernetes, and serverless architectures to streamline deployments and reduce costs.

Extensive experience in microservices design, integrating REST APIs, and enhancing user-facing applications with Angular and React.js. Proficient in performance testing, system monitoring, and optimizing workflows to ensure reliability and scalability. Recognized for mentoring teams, leading modernization efforts, and delivering innovative solutions aligned with business goals.

---

## TECHNICAL SKILLS

- **Languages:** Java, Python, JavaScript, TypeScript
  - **Frameworks:** Spring Boot, MVC, AOP, Spring Batch Hibernate, Spring Security, Kafka, React.js, Angular
  - **Web Technologies:** HTML5, CSS3, REST, SOAP, GraphQL, Angular, React
  - **Cloud Platforms:** AWS (EC2, S3, RDS, Lambda), Azure
  - **Tools:** Docker, Kubernetes, Terraform, Jenkins, GitHub, Log4j, SL4J, Grafana, Dynatrace, Splunk
  - **Databases:** Oracle, MySQL, MongoDB, PostgreSQL
  - **Testing Tools:** JUnit, Mockito, Selenium, Jasmine, Cucumber
  - **Version Control:** Git, Bitbucket, Github
- 

## PROFESSIONAL EXPERIENCE

**USAA | Plano, TX**

**Full Stack Java Developer | September 2023 – Current**

- Led end-to-end development across the SDLC, including requirements gathering, design, development, testing, and deployment in an Agile/Scrum environment.
- Utilized **Java 8/17** features, including **Lambda expressions** and **Stream API**, to enhance performance and streamline bulk data operations.
- Decomposed monolithic systems into **Spring Boot-based microservices**, integrating with **Kafka**, **REST APIs**, and **AWS** cloud services.
- Designed and developed scalable, RESTful APIs enabling seamless communication between microservices and external systems.
- Created highly responsive and interactive front-end components using **Angular**, enhancing overall user experience.

- Built **serverless applications** using **AWS Lambda**, **API Gateway**, and **DynamoDB**, optimizing cost and scalability.
- Deployed and managed cloud infrastructure using **Terraform**, provisioning **AWS EC2**, **S3**, **RDS**, and **Elastic Load Balancers**.
- Engineered and maintained **Kubernetes clusters** to deploy containerized applications, ensuring high availability and fault tolerance.
- Implemented **OAuth2** authentication for secure API access and integrated robust logging/monitoring using **AWS CloudWatch** and **Splunk**, achieving 99.9% uptime.
- Developed CI/CD pipelines using **Jenkins**, integrating automated testing, code quality checks, and deployment workflows.
- Conducted **performance testing** and **load testing** with **JMeter**, optimizing APIs to perform under high-load scenarios.
- Provided production support and incident resolution for mission-critical systems, minimizing downtime and ensuring SLAs.
- Mentored team members on **Angular development best practices** and **AWS deployment**, promoting a culture of continuous learning and collaboration.

**Environment:** Java 17, Spring Boot, Spring Batch, Hibernate, Kafka, Jenkins, Docker, Kubernetes, AWS (EC2, S3, Lambda, CloudWatch, RDS, API Gateway), Angular, JIRA, Splunk, JMeter.

## **JPMC | Remote**

### **Java Full Stack Developer | December 2020 – August 2023**

- Led the development of scalable **Spring Boot microservices**, ensuring seamless integration, high availability, and fault tolerance.
- Employed **Spring Data JPA** for efficient data persistence, utilizing custom repositories and query methods for complex data operations.
- Designed and maintained **RESTful APIs**, documented using **Swagger** to enhance collaboration and onboarding efficiency.
- Created **BDD test scenarios** using **Cucumber** and implemented automated UI testing with **Selenium**, validating web application behavior.
- Managed application logging using **Log4J**, and monitored performance and health with **Splunk**, **Grafana**, and **Dynatrace**.
- Worked across multiple databases, including **MySQL**, **MongoDB**, and **Cassandra**, optimizing schema and queries for performance.
- Integrated **Kafka** for real-time data processing within Spring Boot microservices.
- Designed and implemented **Dockerfiles** and **Docker Compose** configurations for containerized development and deployment.
- Automated builds and deployments using **Apache Maven**, **Jenkins**, and **Terraform**, streamlining CI/CD workflows.

- Created reusable **Terraform modules** to provision and manage **AWS** resources (EC2, S3, Lambda, RDS, VPC), ensuring environment consistency.
- Developed **serverless applications** on AWS using **Lambda**, **API Gateway**, and **DynamoDB**, reducing latency and operational overhead.
- Enhanced UI features using **Angular**, ensuring responsive, cross-browser-compatible interfaces and seamless user interactions.
- Integrated front-end with backend REST APIs using **HTTP services**, **Axios**, and **Fetch** for dynamic content and data sync.
- Developed reusable **Angular components**, **services**, and **directives**, following modular architecture principles.
- Implemented **Angular routing** for smooth navigation between views, including dynamic route handling.
- Boosted database performance via **indexing**, **query tuning**, and **Redis** caching strategies.
- Developed and maintained monitoring and alerting tools using **AWS CloudWatch** and **Splunk** to ensure system stability.
- Migrated legacy systems to **AWS Cloud**, utilizing **Auto Scaling** and **Elastic Load Balancing** for improved scalability and reliability.
- Conducted **stress and load testing** with **JMeter**, validating system performance under heavy traffic.
- Mentored junior developers, conducted code reviews, and shared best practices to uplift team proficiency and code quality.

**Environment:** Java 8, Spring Boot, MVC, Angular, Typescript, Docker, Kubernetes, AWS (EC2, S3, Lambda, API Gateway, CloudWatch, RDS), Terraform, GitHub, MongoDB, Splunk, Redis, Selenium, JMeter.

---

## Smart Solar | Kathmandu Nepal

### Java Developer | July 2019 – November 2020

- Developed core business logic using **Java 8**, leveraging **streams**, **multi-threading**, and **functional programming** to enhance processing speed and application responsiveness.
- Designed and implemented **RESTful APIs** to integrate back-end services with **React.js** front-end applications, ensuring smooth user experiences.
- Built a **scalable microservices architecture** to support real-time business operations with enhanced maintainability and modularity.
- Optimized complex database operations by writing **PL/SQL scripts**, implementing **advanced indexing**, and conducting **SQL tuning** for efficient transaction processing.
- Developed and maintained **CI/CD pipelines** using **Jenkins**, automating testing and deployment across environments.
- Provisioned and managed **AWS resources** including **EC2**, **S3**, **RDS**, **Lambda**, and **CloudWatch** for scalable and cost-effective cloud solutions.

- Integrated **logging and monitoring** solutions with **Splunk** and **Log4J**, proactively identifying and resolving production issues.
- Conducted rigorous **performance testing** using **JMeter**, validating API reliability and performance under high-load conditions.
- Worked with **SOAP web services**, utilizing **WSDL** for service consumption and **XML parsers** for structured data retrieval.
- Designed and developed database objects—**tables, stored procedures, functions, views, indexes, triggers, and constraints**—to support robust data operations.
- Utilized **JMS** for asynchronous messaging to notify users or systems subscribed to specific services.
- Secured REST APIs with **OAuth2** authentication, ensuring compliance with security best practices and enterprise standards.
- Created **disaster recovery strategies** with **AWS backup** and **cross-region replication** for business continuity.
- Collaborated with cross-functional teams—including QA, DevOps, and UI/UX—to deliver enterprise-grade solutions within aggressive deadlines.
- Provided technical mentorship to junior developers, promoting understanding of modern frameworks and toolsets.
- Performed **root cause analysis** for complex production issues, implementing long-term, preventative solutions to improve system stability.

**Environment:** Java 8, Oracle, Spring Boot, Spring Cloud, Maven, Jenkins, AWS (EC2, S3, RDS, Lambda, CloudWatch), Splunk, Log4J, JIRA, JMS,

---

## EDUCATION

- **Master of Science in Information Technology** | Atlantis University
  - **Bachelor of Science in Computing** | Coventry University
-
