

Saral Bhagat | Python Developer

Location: TX, USA | Phone: (214) 910-7603 | Email: bhagatsaral7@gmail.com | [LinkedIn](#)

SUMMARY:

A highly skilled Software Development Engineer with over 4 years of experience specializing in backend development, DevOps automation, and cloud computing. Proficient in building scalable, enterprise-grade applications using Python (FastAPI, Django) and streamlining CI/CD pipelines with Jenkins and Azure DevOps. Experienced in managing cloud infrastructure on Azure and AWS, orchestrating containers with Docker and Kubernetes, and developing full-stack solutions using React and Angular. Adept at designing microservices, implementing RESTful APIs, and deploying secure, high-performance applications on cloud platforms

EDUCATION:

Master in Science in Computer Science

Portland State University, OR

2020

Bachelor of Science in Computer Engineering

Gujarat Technological University, India

2016

EXPERIENCE:

Python Developer (Specialist Programmer) | Infosys Ltd., TX

Feb 2022 - Present

- Spearheaded the development of an AI-powered auditing platform leveraging autonomous agents to automate end-to-end financial audits, streamlining manual processes, boosting accuracy by 92%, and unlocking over \$480M in annual revenue potential through enterprise-scale deployment.
- Designed and developed scalable microservices using Fast API, ensuring high availability and fault tolerance by implementing efficient request handling mechanisms and optimizing API response times for large-scale enterprise applications.
- Developed and optimized ETL pipelines using PySpark, ensuring efficient data processing and transformation for large-scale enterprise datasets.
- Architected and deployed Azure-based solutions utilizing Azure Kubernetes Service (AKS), Azure Functions, and Azure App Services to enhance reliability and reduce downtime.
- Built end-to-end CI/CD pipelines in Jenkins and Azure DevOps, incorporating automated testing, security validation, and infrastructure-as-code (IaC) deployments.
- Implemented containerization using Docker and Kubernetes, optimizing resource utilization and streamlining deployment in distributed cloud environments.
- Designed and optimized Azure SQL Database, Cosmos DB, and Azure Blob Storage, applying indexing strategies and caching mechanisms to enhance performance.
- Developed an interactive dashboard using React and Angular for real-time system monitoring and analytics, integrating API endpoints with Redux for efficient state management.
- Integrated and optimized enterprise-level APIs using LoopBack.io, ensuring seamless connectivity and high-performance data exchanges across microservices.
- Enhanced observability by integrating ELK Stack (Elasticsearch, Logstash, Kibana) and Azure Monitor for real-time logging, event tracking, and anomaly detection.
- Engineered secure RESTful APIs with OAuth2 authentication and Azure Active Directory (Azure AD) integration, enforcing role-based access control (RBAC) and multi-factor authentication (MFA).
- Automated unit, integration, and performance testing using PyTest and Selenium, improving system stability and reducing regression issues.

Python Developer | Vuesol, OR

Jul 2021 - Feb 2022

- Designed and implemented a scalable Flask-based backend system, creating RESTful APIs to handle high-volume transactional requests with optimized response times and failover mechanisms to ensure uninterrupted service availability.
- Worked closely with cross-functional teams to analyze and enhance critical algorithms, applying complexity analysis and optimization techniques that improved overall system scalability and efficiency.
- Developed, containerized, and orchestrated applications in Docker and Kubernetes, implementing load balancing, service discovery, and pod autoscaling to optimize application performance under variable workloads.
- Optimized database performance in Azure SQL Database and PostgreSQL, implementing advanced indexing techniques, query optimization, and database partitioning to enhance response times and reduce query execution costs.
- Built and integrated a front-end dashboard using React and TypeScript, ensuring seamless interaction with Fast API, enhancing user engagement through dynamic visualizations and real-time data updates.
- Refactored core backend algorithms in a Flask-based system, leveraging efficient data structures and search/sort techniques to reduce response times by 20% under heavy transactional loads.

- Implemented an event-driven architecture with Azure Service Bus, enabling asynchronous communication between microservices, improving fault tolerance, and handling real-time event processing with minimal latency.

Graduate Assistant | Portland State University, OR

Aug 2020 - Apr 2021

- Developed Flask-based AR/VR APIs optimized for 5G networks, improving performance by 40% and reducing latency by 50%.
- Implemented Azure Functions for serverless processing, reducing infrastructure costs and improving application scalability.
- Designed and deployed Azure SQL Database for structured data storage, improving query performance.
- Created an interactive React & TypeScript front-end for data analysis and back-end using Java.
- Built containerized applications using Docker and Kubernetes, ensuring consistency across development and production environments.
- Integrated Azure Service Bus for efficient message queuing between microservices.

TECHNICAL SKILLS:

Languages:	Python, SQL, JavaScript, HTML, CSS, Bash, Shell Scripting, TypeScript, Java, C++
Databases:	MySQL, PostgreSQL, MongoDB, Azure Cosmos DB, Azure SQL Database, AWS Redshift, DynamoDB
Frameworks & Libraries:	Django, Flask, Fast API, PySpark, Pandas, NumPy, OpenCV, SciPy, TensorFlow, Keras, Scikit-learn, Matplotlib, Seaborn, PyTest, Pydantic, Mock, Fixtures, Mypy, Ruff, Pylint, RESTful API, PyQt
Cloud & DevOps:	Azure (Azure DevOps, Azure Functions, Azure Kubernetes Service - AKS, Azure Blob Storage, Azure Cosmos DB, Azure CI/CD), AWS (EC2, S3, Lambda, RDS, ECS, IAM), Google Cloud Platform, Terraform, CloudFormation
CI/CD & Automation:	Jenkins, Azure DevOps Pipelines, GitHub Actions, Ansible, Docker, Kubernetes, Helm Charts, Terraform, Bash Scripting
Frontend Technologies:	React, TypeScript, Next.js, Redux, Tailwind CSS, Bootstrap, REST & GraphQL API integration
Monitoring & Logging:	Grafana, Prometheus, ELK Stack (Elasticsearch, Logstash, Kibana), Splunk, Azure Monitor, DataDog
Methodologies:	Agile (Scrum), CI/CD, TDD, DevOps, Data-Driven Development, Machine Learning, Object-Oriented Programming (OOP), Cloud-Native Development, Test Automation, Microservices
AI	Retrieval-Augmented Generation (RAG), Hugging Face Transformers, Vector Databases, LangChain, LLM Fine-Tuning, NLP

CERTIFICATIONS:

- Infosys Certified Data Science Professional using PySpark
- Infosys Certified Full Stack Professional
- Generative AI Landscape (Infosys)
