

# Saranya Medida

**Data Analyst | SQL, Python, Power BI, Tableau | Healthcare & Finance Domain**

CA, USA | [medidasaranva1998@gmail.com](mailto:medidasaranva1998@gmail.com) | (719) 409-0361 | [linkedin](#)

## SUMMARY

- Accomplished **Data Analyst** with 4+ years of experience in leveraging advanced analytics techniques, machine learning algorithms, and statistical methodologies to derive actionable insights that drive business performance.
- Proficient in programming languages such as **SQL, Python and R**, complemented by extensive hands-on experience in data visualization tools like **Power BI and Tableau**.
- Skilled in managing and optimizing databases (**MySQL, PostgreSQL, MongoDB**) and adept in cloud platforms (**AWS, Microsoft Azure**) to enhance data accessibility and scalability.
- Experienced in applying methodologies including **Agile, Scrum, and Waterfall**, facilitating efficient project management and collaboration across cross-functional teams.

## SKILLS

|                             |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |
|-----------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Methodologies:</b>       | SDLC, Agile, Waterfall, Scrum                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |
| <b>Language:</b>            | Python, SQL, R, SAS                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |
| <b>Packages:</b>            | NumPy, Pandas, Matplotlib, SciPy, Scikit-learn, TensorFlow, Seaborn, dplyr, ggplot2, Keras                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |
| <b>Visualization tools:</b> | Power BI (DAX, Power Query), QlikView, Tableau, Advanced Excel (Macros, VBA, Pivot Tables, VLOOKUP), Google Workspace (Sheets, Slides), Looker                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |
| <b>Database:</b>            | MySQL, PostgreSQL, NoSQL, MongoDB, SQL Server, Azure SQL, Oracle                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |
| <b>Cloud Platforms:</b>     | Amazon Web Services, Microsoft Azure, GCP                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |
| <b>Other Skills:</b>        | M Code, DAX Studio, SISS, SSRS, Machine Learning Algorithms, ETL Tools, Statistics, Salesforce CRM, Snowflake, SAS, SPSS, SAP, Hadoop, Spark, Alteryx, Probability distributions, Mathematics, Confidence Intervals, ANOVA, Advance Analytics, OLAP & OLTP, SAS, MS Office Suite (Microsoft Word, PowerPoint, MS Visio), Hypothesis Testing, Regression Analysis, Linear Algebra, Google big query, Data Mining, Data Visualization, Data Warehousing, Data transformation, Data Storytelling, Big Data, Data Integration, Data Interpretation, Data Pipeline, Association rules, Clustering, Classification, Regression, A/B Testing, Forecasting & Modelling, Data Cleaning, Data Wrangling, Git, GitHub, JIRA |
| <b>Soft Skills:</b>         | Time management, Leadership, Management, Problem-solving, Negotiation, Decision-Making, Documentation and Presentation, Verbal Communication                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |

## EDUCATION

**Master of Science** in Business Analytics: University of North Texas, Denton, TX.

**Bachelor of Science** in Biotechnology: Koneru Lakshmaiah University (KLU), India

## CERTIFICATION

- Microsoft Certified Power BI Data Analyst Associate.
- Certified ScrumMaster.
- AWS Certified Data Analytics – Specialty

## EXPERIENCE

**Data Analyst | Kaiser Permanente, CA, USA**

**Dec 2023 – Present**

- Engineered and executed ETL workflows using Alteryx to extract, transform, and load data from Epic electronic health records (EHRs) and various healthcare data repositories, integrating disparate data sources for comprehensive analysis.
- Utilized Excel to perform data validation and quality checks before ETL processes, leveraging advanced functions like VLOOKUP, INDEX/MATCH, and PivotTables to ensure data integrity and provide detailed insights into patient care metrics.
- Conducted advanced data analysis using SQL and Python to uncover trends impacting patient care by 65%, identifying critical intervention areas through detailed data queries and visualizations.
- Developed interactive dashboards and reports in Power BI using DAX and Power Query to deliver actionable insights, facilitating real-time access to KPIs and significantly enhancing data-driven decisions aimed at improving patient outcomes and care quality.
- Executed statistical analyses, including ANOVA, to evaluate treatment protocols' impact on patient outcomes, isolating significant factors influencing recovery metrics.
- Designed A/B testing frameworks to assess healthcare interventions' effectiveness on patient satisfaction and recovery metrics, analyzing results for actionable conclusions.

- Leveraged OLAP tools for multidimensional data analysis, enhancing reporting capabilities by 88% through rapid retrieval and aggregation of patient data across multiple dimensions.
- Ensured strict compliance with HIPAA regulations during ETL processes, safeguarding data privacy and security while managing healthcare data integrations.
- Managed data architecture and processing in Amazon Web Services (AWS), optimizing scalability, security, and accessibility for analytical tasks using services like S3, EC2, and RDS.

#### **Data Analyst | Deloitte, India**

**July 2020 – Dec 2022**

- Collaborated with cross-functional stakeholders to gather comprehensive requirements for the Financial Risk Assessment Dashboard, applying Agile methodologies to facilitate flexibility and iterative development, ensuring alignment with financial objectives.
- Developed and executed robust ETL processes to extract, transform, and load data from PostgreSQL databases, implementing stringent data validation techniques to ensure 80% quality and integrity in financial datasets.
- Utilized Python scripts for advanced data cleaning and wrangling, systematically addressing missing values, outliers, and inconsistencies to prepare high-quality financial datasets for analysis.
- Conducted exploratory data analysis (EDA) using Matplotlib and SciPy to identify trends, correlations, and key risk factors within financial data, and generated ad hoc reports to stakeholders, driving 60% actionable insights for risk assessment.
- Designed and implemented predictive models leveraging statistical methods and machine learning algorithms to assess financial risk, enhancing the accuracy of risk evaluations.
- Created interactive visualizations in Tableau to effectively present risk metrics and insights, employing advanced visualization techniques to enhance stakeholder understanding of 74% complex financial data relationships.
- Managed project tasks and progress using JIRA, facilitating effective communication among team members and stakeholders while ensuring timely delivery of project milestones through iterative sprint planning.
- Implemented data processing workflows using Apache Spark to handle large-scale financial datasets efficiently, leveraging distributed computing for improved processing speed.
- Deployed machine learning models and data pipelines on Google Cloud Platform (GCP), utilizing cloud services to ensure scalability and accessibility of analytical resources for ongoing financial risk assessments.
- Conducted user training sessions tailored for stakeholders to familiarize them with dashboard features and functionalities, promoting a culture of data-driven decision-making in financial contexts.
- Ensured rigorous UAT and SIT testing of the dashboard through systematic validation processes to confirm data accuracy and reliability, incorporating user feedback for continuous improvement and optimization of dashboard performance in financial risk assessment.

#### **Academic Project – Predictive Modeling in Healthcare**

- Built a logistic regression model using Python and SQL to predict 30-day hospital readmissions.
- Used Power BI for patient risk scoring dashboards to improve clinical intervention planning.
- Worked with synthetic HIPAA-compliant datasets and deployed visualizations on Azure.
