

Saraswathi Harshitha Gandu

Java Full Stack Developer

Email: saraswathih.gandu@gmail.com | Phone: +1 8065773169

LinkedIn: <https://www.linkedin.com/in/harshithagandu>

PROFESSIONAL SUMMARY:

- Proven Full Stack Java Developer with Around 7 years of experience designing, developing, and deploying enterprise and cloud-native applications in education, banking, and IT services domains.
- Strong expertise in backend development using Java, Spring Boot, Spring Security, Hibernate ORM, JPA, Microservices, and RESTful APIs.
- Skilled in front-end development with React.js, Redux, Angular, TypeScript, RxJS, HTML5, CSS3, and JavaScript (ES6+), delivering responsive and user-friendly single-page applications.
- Proficient in SQL and NoSQL databases including MySQL, PostgreSQL, and MongoDB with strong skills in query optimization and transaction management.
- Hands-on experience deploying applications on AWS (EC2, S3, RDS, Lambda, EventBridge, Auto Scaling) and automating provisioning with Terraform, Docker, and Kubernetes.
- Experienced with event-driven architectures using Apache Kafka, enabling high-volume, real-time data streaming and system integration. Adept at CI/CD practices using Jenkins and Gradle to streamline deployments and improve delivery efficiency.
- Ensured code quality and security with JUnit, Mockito, Jest, SonarQube, OAuth 2.0, JWT, and RBAC, achieving high coverage and robust authentication/authorization frameworks.
- Knowledgeable in Agile methodologies (Scrum, Kanban) with experience in sprint planning, stand-ups, retrospectives, and collaborative delivery.
- Proven team collaborator with exceptional communication and leadership skills, bridging gaps between cross-functional teams and aligning technical efforts with business goals.

EDUCATIONAL DETAILS:

Master's (M.S.) in Computer Science

Texas Tech University, Lubbock, TX

August 2023 – May 2025

Bachelor of Technology (B.Tech) in Computer Science and Engineering

Kallam Haranadhareddy Institute of Technology, Guntur, India

June 2015 – June 2019

TECHNICAL SKILLS:

Programming Languages & Scripting: Java, SQL, PL/SQL, Kotlin, Shell Scripting, JavaScript (ES6+), TypeScript

UI Development: JSON, HTML5, CSS3, Angular, React.js, Vue.js, Bootstrap, Material UI, RxJS, AJAX

Java Frameworks: Spring Boot, Spring Framework (Core, MVC, Security, AOP, Batch, DI/IOC), Hibernate ORM, Spring Data JPA, Microservices, RESTful APIs, GraphQL

Cloud Platforms: AWS (EC2, ECS, EKS, S3, RDS, Aurora, Lambda, Auto Scaling, EventBridge), Azure, GCP

DevOps & CI/CD: Jenkins, Azure DevOps, Docker, Kubernetes, OpenShift, Maven, Gradle

Messaging & Event Streaming: Apache Kafka (Producers, Consumers, Connect)

Version Control Systems: Git, GitHub, Bitbucket

API Tools: Swagger, Postman, GraphQL(Queries, Mutations, Resolvers)

Monitoring & Logging: ELK Stack, Grafana, Prometheus, Splunk, JProfiler

Databases & Data Management: MySQL, PostgreSQL, Oracle, SQL Server, MongoDB, Apache Spark (Core, SQL)

Agile & Project Management: Agile Methodologies: Scrum, Kanban, Sprint Planning, Retrospectives, Jira, Confluence, Slack, Microsoft Teams

Testing & Quality Assurance: JUnit, Mockito, JEST, Selenium, SonarQube, Test-Driven Development (TDD)

Security & Authentication: OAuth 2.0, JWT, Spring Security, Role-Based Access Control (RBAC)

WORK EXPERIENCE:

Texas Tech University, Lubbock, TX

September 2023 – Present

Role: Full Stack Developer

Responsibilities:

- Contributed to the design and development of Spring Boot microservices for student registration, dining plan management, and simulated payment processing, improving backend modularity and reducing service response latency during demos.
- Assisted in building front-end prototypes with React.js and Redux to showcase dining plan selection workflows, enabling usability testing and gathering feedback from students, which improved flow clarity by ~15% in follow-up sessions.

- Implemented authentication, input validation, and role-based access controls with Spring Security and Hibernate ORM, simulating secure transactions and reducing invalid test inputs by ~20%.
- Collaborated with peers to configure Apache Kafka topics and consumers for real-time updates between menu services and dashboards, demonstrating consistent event-driven communication.
- Participated in backend API testing with Postman and contributed to API documentation, improving test coverage and reducing inconsistencies in integration testing by ~25%.
- Deployed services on AWS Free Tier (EC2 and RDS) and co-developed a basic CI/CD pipeline with Jenkins and Docker, reducing deployment setup time by ~30% for class presentations.

Environment: Spring Boot, Java, React.js, Redux, Spring Security, Hibernate ORM, Apache Kafka, Postman, AWS (EC2, RDS), Jenkins, Docker, MySQL

Client: Tata Consultancy Services Limited, Hyderabad

August 2021 - June 2023

Role: Java Full Stack Developer

Responsibilities:

- Built and scaled microservices-based applications with Spring Boot and Core Java, ensuring reliable performance and scalability for enterprise systems.
- Designed and developed front-end applications with Angular, TypeScript, and RxJS, delivering responsive single-page user experiences.
- Developed RESTful and GraphQL APIs, enabling flexible data retrieval and seamless integration with client-facing platforms.
- Integrated AWS services, including EC2, RDS, S3, and Auto Scaling, to deploy and scale applications in a cloud environment, achieving ~99% system uptime.
- Engineered back-end services with Core Java and JDBC, ensuring seamless database connectivity and transaction management.
- Implemented Apache Kafka pipelines to stream high-volume financial transactions with exactly-once delivery.
- Automated ingestion with Kafka Connect into AWS S3/RDS, reducing manual ETL workloads by ~30%.
- Enhanced observability with Splunk and CloudWatch, cutting mean-time-to-recovery (MTTR) by ~20%.
- Containerized applications with Docker and orchestrated deployments on Kubernetes, improving deployment consistency and scalability.
- Collaborated with DevOps teams to implement Docker and Kubernetes for containerization and orchestration of microservices.
- Used Jenkins and Gradle to automate the build and deployment of CI/CD pipelines, reducing deployment effort and cutting build times by ~25%.
- Secured applications with OAuth 2.0 and RBAC, strengthening authentication and authorization controls.
- Improved reliability with JUnit and Jest testing frameworks, achieving ~80% code coverage and reducing post-release defects. Applied Infrastructure as Code with Terraform for repeatable cloud provisioning and reduced setup effort.
- Followed Agile methodologies in sprint planning, stand-ups, and retrospectives to adapt and deliver features incrementally. Participated in daily stand-ups, contributing to project planning, task prioritization, and continuous delivery of features.

Environment: Spring Boot, Core Java, Angular, TypeScript, RxJS, MySQL, RESTful APIs, GraphQL, AWS (EC2, RDS, S3, Auto Scaling), JDBC, Apache Kafka, Kafka Connect, Splunk, CloudWatch, Docker, Kubernetes, Jenkins, Gradle, OAuth 2.0, RBAC, JUnit, Jest, Terraform, Agile Methodology

Client: Sola Info IT Solutions Ltd, Hyderabad

Feb 2019 - June 2021

Role: Associate Software Engineer

Responsibilities:

- Developed and maintained scalable Java-based applications using Core Java, Spring Boot, and Object-Oriented Programming (OOP) principles, ensuring maintainability and high performance.
- Implemented distributed transaction management and data consistency using Spring Boot with JPA/Hibernate instead of EJB, improving reliability in microservices-based architectures. Used Apache Kafka for asynchronous, event-driven messaging between microservices.
- Designed and deployed cloud-native applications on AWS (EC2, ECS, EKS, Lambda), ensuring high availability and cost optimization with ~98% uptime.
- Leveraged AWS S3 for scalable object storage and AWS RDS/Aurora for relational database management, ensuring data integrity and availability.
- Integrated Hibernate ORM and Spring Data JPA for efficient database operations, reducing boilerplate code and improving query performance.
- Developed and deployed RESTful web services with Spring Boot, using Swagger for documentation.
- Applied modern MVC and reactive architectures with Spring MVC/ Spring WebFlux, ensuring modularity,

scalability, and better separation of concerns.

- Developed responsive, dynamic UIs using React.js and TypeScript, improving user experience and performance.
- Applied design patterns such as Singleton, Factory, Observer, Builder, and Strategy to ensure clean, reusable, and testable code.
- Managed version control with Git/GitHub for distributed collaboration, code reviews, and CI/CD integration.

Environment: Core Java, Spring Boot, Spring MVC, Spring WebFlux, JPA, Hibernate ORM, AWS (EC2, ECS, EKS, Lambda, S3, RDS, Aurora), Apache Kafka, RESTful APIs, Swagger, React.js, TypeScript, Git, GitHub, Design Patterns (Singleton, Factory, Observer, Builder, Strategy)
