

SUMMARY

Data Analyst with around 3 years of experience in extracting, transforming, and analyzing large datasets to drive data-driven business decisions in healthcare, manufacturing, and software industries. Proficient in SQL, Python, Power BI, and Snowflake, with expertise in developing interactive dashboards, automating ETL pipelines, and implementing predictive models to optimize processes and enhance operational efficiency. Skilled in data visualization, statistical analysis, and workflow automation, leveraging tools like Alteryx, SAS, and AWS S3 to improve data accuracy and streamline reporting. Experienced in cross-functional collaboration, working closely with clinicians, IT teams, and stakeholders to align data initiatives with organizational goals. Strong background in data governance, compliance (HIPAA, CMS), and business intelligence, with a proven track record of enhancing system performance and improving decision-making through actionable insights. Driven to uncover hidden insights, enhance data quality, and empower strategic decision-making through advanced analytics and automation.

TECHNICAL SKILLS

Languages:	Python, R, SQL
Frameworks & Libraries:	Pandas, NumPy, Scikit-learn, Statsmodels, Matplotlib, Seaborn, Plotly, Dash, Streamlit
Database:	MySQL, SQL Server, AWS Redshift, Snowflake, PostgreSQL
Visualization Tools:	Tableau, Power Bi, Excel
Tools:	Jupyter Notebook, Google Colab, Excel, Git, Jira, ETL Tools, Power Automate
Data Warehousing:	AWS Redshift, Snowflake, Data Lakes, ETL Pipelines, Data Ingestion and Integration
Data Governance & Compliance:	Alteryx, Adobe Analytics, Erwin Data Modeler, ER Studio v17, GitHub, Jira, HIPAA Compliance, Data Validation & Quality Checks, Data Security & Governance Policies
Advanced Analytics & Machine Learning:	Predictive Modeling, Time Series Forecasting, Regression Analysis, Classification Models, Survival Analysis, A/B Testing, Hypothesis Testing

- EXPERIENCE
- Fresenius, USA

Feb 2025 – Present

Data Analyst

 - Analyze and interpret patient treatment data using SQL to identify trends, detect anomalies, and optimize dialysis care strategies by extracting, cleaning, and transforming data for evidence-based decision-making.
 - Develop and implement predictive models with Python using libraries like Scikit-Learn and Pandas to assess risk factors, predict treatment outcomes, and enable early intervention through regression analysis, classification techniques, and time-series forecasting.
 - Develop and automate interactive dashboards and reports using Power BI to provide real-time insights on treatment efficacy, patient adherence, and operational performance while collaborating with clinicians, IT, and compliance specialists to align analytics initiatives with healthcare objectives.
 - Design and optimize ETL pipelines using Snowflake to integrate structured and unstructured data from EHR, lab results, and clinical records, ensuring efficient data transformation, indexing, and partitioning for real-time analytics.
 - Assess and validate data quality using Alteryx to automate profiling, cleansing, and transformation while ensuring compliance with HIPAA, CMS, and internal governance policies through robust validation and anomaly detection.
 - Monitor and evaluate key performance indicators (KPIs) using Excel, applying advanced statistical techniques like pivot tables, regression analysis, and forecasting models to track patient outcomes, treatment adherence, and resource utilization for informed decision-making.
 - Support and enhance clinical research using SAS to analyze large healthcare datasets, conduct survival analysis, and identify patterns in kidney disease progression, developing data-driven models to optimize treatment protocols and improve patient care.

SKAPS Industries, India

Jan 2022 – Nov 2022

Data Analyst

 - Designed and optimized ERP solutions by integrating SQL, Python, and advanced database management techniques, customizing functionalities to streamline operations across sales, procurement, accounting, HR, and shipping.
 - Developed interactive reports and automated dashboards using Power BI, SQL, and I-net, enabling real-time data analysis and providing actionable insights to support strategic decision-making.
 - Implemented Power Automate solutions to replace manual workflows, integrating automation into key business processes to improve efficiency, reduce errors, and enhance data consistency.
 - Evaluated system performance by conducting in-depth analyses, diagnosing bottlenecks, and executing proactive server maintenance strategies to enhance reliability and minimize downtime.
 - Led cross-departmental initiatives to introduce automation tools, identifying opportunities for digital transformation and successfully integrating new technologies to improve business processes.
 - Collaborated with stakeholders to analyze business needs, translating requirements into ERP customizations that improved system usability, reporting accuracy, and overall operational effectiveness.
 - Developed and implemented data governance standards, ensuring data integrity, security, and compliance across enterprise reporting and automated workflows.

Cybage Software, India Data Analyst • Extract, transform, and manage structured and unstructured data from relational databases, cloud data warehouses, and APIs using SQL, Snowflake, and AWS S3, ensuring data integrity and accessibility for business intelligence and reporting. • Document and standardize data lineage, metadata, and transformation logic using Erwin Data Modeling and Confluence, enabling seamless data traceability and compliance with governance frameworks. • Translate business needs into analytical models and dashboards by developing data visualizations and reports using Power BI (DAX, Power Query) and Python (Pandas, NumPy), enhancing data-driven decision-making. • Develop and maintain ETL workflows by implementing data extraction, cleansing, and transformation using SQL, Python scripts, and ETL tools, ensuring consistency and accuracy across multiple data sources. • Design and deploy real-time reporting solutions in Crystal Reports, creating interactive visualizations that enhance operational insights and executive decision-making. • Perform in-depth data profiling and anomaly detection using SQL and Python (SciPy, Matplotlib) to identify discrepancies, uncover hidden patterns, and improve data reliability across critical business functions. • Analyze historical trends and performance metrics to provide insights into operational efficiencies, customer behavior, and market trends, supporting strategic planning and continuous process improvements. • Validate, refine, and enhance predictive models with Scikit-Learn and R (ggplot2) to support forecasting, risk assessment, and data-driven business strategies.
