SUMMARY

- Data Analyst with 3+ years of hands-on experience delivering data-driven solutions in fast-paced, cross-functional environments.
- Proficient in Python, SQL, and R for end-to-end data analysis, automation, and predictive modelling.
- Skilled in data cleaning, ETL workflows, and building scalable pipelines using tools like dbt, Airflow, and Informatica.
- Experienced in creating dynamic Power BI and Tableau dashboards to deliver real-time insights and performance tracking.
- Adept at time series analysis, A/B testing, and text mining to support decision-making and uncover trends.
- Hands-on with AWS tools including Redshift, Athena, S3, and Lambda for cloud-based data processing.
- Applied machine learning techniques and NLP for customer behaviour analysis and churn prediction.
- Automated recurring reports and optimized workflows to improve reporting speed and reduce manual effort.
- Effective communicator with experience presenting data-driven insights to technical and non-technical stakeholders.

SKILLS

- **Programming Languages:** Python, SQL, R, React.js
- **Analytical Skills:** Data Mining, Data Cleansing, Statistical Analysis, Data Wrangling, Time Series Analysis, A/B Testing, Text Mining, ETL, Data Warehousing, SAP, SAS
- **Data Visualization:** Power BI, Tableau, Advanced Excel
- **Business Skills:** Report automation, stakeholder communication, KPI tracking
- **Cloud Platforms:** AWS (Redshift, DynamoDB, S3, Athena, Lambda)
- **Project Management Tools:** Jira, Trello
- **Databases & Data Warehouses:** PostgreSQL, SQL Server, MySQL, BigQuery
- **Libraries & Frameworks:** NumPy, Pandas, Matplotlib, Plotly, Seaborn, Streamlit, FastAPI, NLTK
- **Data Engineering:** Alteryx, Talend, Informatica, Apache Airflow, dbt
- **Version Control:** Git, GitHub

WORK EXPERIENCE

Honeywell

August 2024 – May 2025

Data Analyst Intern

- Developed real-time dashboards in Power BI to visualize critical factory KPIs such as OEE, equipment downtime, and throughput across multiple plants.
- Built data pipelines using Apache Airflow and dbt to automate ingestion and transformation from AWS Redshift and S3 sources.
- Cleaned and wrangled raw IoT and operational data using Python (Pandas), ensuring accuracy and consistency across large datasets.
- Implemented time series analysis to detect performance anomalies and support predictive maintenance strategies.
- Automated recurring operations reports using Python and Power BI, reducing reporting time by 35% and improving data accuracy.
- Delivered weekly KPI performance reports and insights to operations leadership, driving data-informed decisions across three plant locations.
- Rolled out the solution to 3 manufacturing sites, helping reduce average downtime reporting delays by 40%.

Dell Technologies

November 2020 – July 2023

Data Analyst

- Built a web-based sales analytics dashboard using Python (FastAPI) and React.js to deliver real-time insights and self-service reporting for business users.
- Analysed large volumes of sales data using Pandas to uncover trends, regional performance gaps, and product-level insights.
- Created automated, API-driven reporting workflows, enabling daily updates of KPIs and operational metrics directly within the dashboard.
- Integrated data from a PostgreSQL warehouse, and exposed processed results via RESTful APIs for seamless frontend consumption.

- Developed interactive charts and filters using Plotly.js, empowering users to generate custom reports by region, product, or time period.
- Designed role-based dashboards to personalize reporting views for sales executives, regional managers, and analysts.
- Ensured data accuracy and consistency by validating key metrics against Power BI/Tableau reports.
- Reporting insights from the dashboard led to targeted interventions, contributing to a 12% increase in sales conversion rates.

PROJECTS

Customer Churn Prediction Model

Tech Stack: Python, Pandas, NumPy, scikit-learn, Seaborn, SHAP

- Developed a churn prediction model using logistic regression to classify customer retention risk based on behavioural and support data.
- Performed comprehensive data preprocessing and feature engineering using Pandas and NumPy to enhance model accuracy and relevance.
- Leveraged SHAP values to interpret feature impact, enabling business teams to understand key churn indicators and plan mitigation strategies.

Sales Performance Dashboard

Tech Stack: Power BI, SQL Server, Excel, Power Query, DAX

- Created a dynamic and user-friendly Power BI dashboard to visualize sales trends, product performance, and regional comparisons.
- Integrated and transformed data from SQL Server and Excel sources using Power Query and DAX to ensure clean, structured inputs.
- Implemented row-level security and interactive drill-through features, allowing tailored insights for executives, managers, and analysts.

EDUCATION

Master in Data Science

August 2023 – May 2025

University of Alabama at Birmingham | GPA: 3.7

Bachelor Computer Science

August 2017 – June 2021

CMR Engineering College – Hyderabad, India | GPA: 6.67 / 10
