

Sathvika Anugu

Data Analyst

+1 (240) 547 9336 | reddyasathvika@gmail.com | [Linkedin](#)

SUMMARY

Data Analyst with 5+ years of experience in automated data pipelines, predictive models and ML-driven analytics across cloud platforms (AWS, Snowflake, Databricks). Skilled in feature engineering, deploying machine-learning workflows, and creating real-time AI insights for churn, forecasting, and portfolio optimization. Adept at translating business requirements into actionable insights through ETL automation, visualization, and statistical modeling, collaborating cross-functionally with engineering, data science, and product teams to deliver accurate, production-grade analytics solutions for enterprise clients including BlackRock and Hexaware Technologies.

SKILLS

- **Programming & Frameworks:** Python (Pandas, NumPy, SciPy, Scikit-learn, PySpark, XGBoost, Statsmodels, Plotly, Streamlit, FastAPI) | SQL | Bash
- **Data Engineering & ETL:** Apache Airflow | dbt | AWS Glue | Snowflake | Databricks | Redshift | BigQuery | Azure Data Factory
- **Visualization & Reporting:** Tableau | Power BI | Plotly | Streamlit | Matplotlib | Seaborn | Excel (Advanced Pivot Tables, Power Query, Macros)
- **Cloud Platforms:** AWS (S3, Glue, Lambda, Redshift) | Azure (Synapse, Data Factory) | GCP (BigQuery)
- **Data Modeling & Warehousing:** Star/Snowflake Schema Design | Data Lakes | Normalization/Denormalization | Dimensional Modeling
- **AI/ML & Analytics:** Regression | Classification | Time Series Forecasting | Clustering | Feature Engineering | Model Validation (Cross-Validation, SHAP, LIME) | Drift Monitoring | Statistical Analysis
- **Collaboration & Tools:** Git | GitHub | JIRA | Confluence | Agile/Scrum | Docker | CI/CD Automation

EXPERIENCE

Blackrock

Jan 2024 – Present

Data Analyst

- Designed ETL pipelines using Airflow, AWS Glue, and dbt to produce automated ML-ready feature tables, reducing manual processing by 40%; optimized Python (Pandas, PySpark) transformations for 10M+ daily records, boosting query performance by 25%.
- Developed interactive Tableau dashboards visualizing asset allocation and portfolio KPIs (risk tiers, churn scores, allocation insights), improving decision-making speed by 30%.
- Applied machine learning models (XGBoost, RandomForest) to predict client churn, allocation risk and optimize investment strategy performance improving model precision by 12%.
- Migrated legacy SQL workflows to Snowflake and Redshift, improving scalability and reducing compute costs by 18%.
- Created FastAPI REST APIs to serve real-time ML predictions and ingest cloud data directly into Snowflake scoring pipelines.
- Implemented data quality validation using Great Expectations and ensured CI/CD automation through GitHub Actions.
- Partnered with data science and finance teams to ensure consistency in financial reporting logic across data sources.

Hexaware Technologies

Aug 2019 - Jul 2022

Data Analyst, India

- Designed ETL pipelines using AWS Glue and Airflow to integrate multiple regional databases into centralized Snowflake warehouse cutting reporting latency by 35%.
- Developed ML driven forecasting models (ARIMA, Prophet) to predict demand trends and optimize inventory control.
- Conducted data modeling and process documentation to streamline data ingestion from MySQL and Oracle systems.
- Created Power BI dashboards to track operational KPIs, saving 25+ hours/month in manual reporting efforts.
- Automated preprocessing, outlier detection, and feature generation in Python + SQL, improving data accuracy by 30%.
- Collaborated with cross-functional teams using JIRA and Confluence under Agile environment for sprint-based analytics delivery.
- Managed data quality through dbt tests and Airflow DAG dependencies, ensuring clean data delivery to end users.
- Worked closely with business users to translate requirements into SQL-based KPIs and automated dashboards.

EDUCATION

- Master of Professional Studies in Data Science, University of Maryland, Baltimore County, MD

PROJECTS

1. Customer Retention Analytics – BlackRock

- Built an XGBoost retention model using engineered behavioral features, achieving 88% accuracy and producing interpretable SHAP-based insights for business teams.
- Deployed Airflow DAGs for automated retraining, drift checks, and scoring, integrating outputs into Snowflake and Tableau to support portfolio managers in real time helping improve quarterly client retention by 8–10%.

2. Marketing Performance Optimization – Hexaware

- Ingested 50M+ campaign data rows via PySpark + Databricks, transforming for downstream BI analysis.
- Created interactive Power BI dashboards displaying conversion funnel metrics, leading to a 12% lift in campaign ROI.
- Automated KPI refresh and alert workflows through AWS Glue and Airflow schedulers cutting data latency from 12 hours to under 3 hours and eliminating manual report updates.
