SUMMARY

Detail-oriented and motivated Computer Science graduate with hands-on experience in full-stack web development and applied AI. Skilled in developing scalable applications with a focus on React.js in the MERN stack, building machine learning models using Python, and working in Agile environments. Eager to contribute to innovative, user-centered software solutions and grow within a dynamic development team.

EDUCATION

SR University Bachelor of Technology in Computer Science CGPA: 8.02/10	Warangal, Telangana Oct 2021– May 2025
Narayana Junior College MPC Intermediate Percentage: 97%	Hyderabad, Telangana June 2019 – June 2021
Tejaswi High School Schooling GPA: 10 /10	Warangal, Telangana June 2018 – April 2019

EXPERIENCE

MERN Stack Developer Intern

IOStreak Solutions | Remote

- Developed and maintained full-stack features for an e-learning platform using React, Node.js, Express, and MongoDB
- Developed a chatbot interface using React and integrated it with backend APIs, reducing manual query handling by 40% and improving user interaction time by 25%.
- Collaborated with team members using GitHub and Agile tools to deliver weekly sprint goals

AI Engineer Intern

Mecas AI (Switzerland-based Startup) | Remote

- Built and deployed automated web scraping pipelines to generate "Zurich AI Events" newsletter
- Processed and cleaned structured and unstructured data using Python, Selenium, and Pandas
- Gained hands-on experience applying AI tools in real-world outreach and product scenarios

PROJECTS

Face mask detection | Python using ML Techniques

- Built a real-time face mask detection application using OpenCV, machine learning classifiers to enhance public safety monitoring.
- Integrated webcam video stream processing with automatic face and mask detection using CNN-based classification.

Vehicle Rental | Java

- Developed a Java-based rental management system enabling vehicle listings, bookings, and customer account handling using OOP principles.
- Implemented data validation, pricing logic, and dynamic UI to simulate a scalable rental platform for both users and admins.

Heart Disease Prediction | Python using ML techniques

- Designed a machine learning pipeline using Logistic Regression and KNN to predict heart disease risk based on patient health data.
- Preprocessed data (normalization, feature selection) and evaluated models using confusion matrix, accuracy, and ROC metrics.

Car Sales | Python using ML techniques

- Built a regression model to forecast car sales using multivariate data, including salary, fuel efficiency, and engine power.
- Conducted exploratory data analysis (EDA) with Pandas and visualized insights using Matplotlib to improve model interpretability.

SKILLS

Technical: Languages: Python, C, Basic JAVA

Web Technologies: HTML, CSS, React.js, Node.js, Express.js

Databases: MongoDB, MySQL

Tools & Platforms: GitHub, MongoDB Compass, VS Code, Postman

AI/ML: Scikit-learn, NumPy, Pandas, Web Scraping, Model Deployment

Other: REST APIs, Agile Methodologies, Debugging

Soft skills: Communication, Adaptability, Problem-solving, Leadership, Teamwork
