

Satyajana Prakash Achanta

satya@careerattainment.com | +1 (901) 859-5322 | USA | [Linkedin](#)

PROFESSIONAL SUMMARY

Software Engineer with 2+ years of experience building scalable web applications and APIs using **Springboot, Django, Flask, and FastAPI**. Skilled in **Java, Python, RESTful API development, PostgreSQL, MySQL, MongoDB**, and integrating front-end technologies (**HTML, CSS, JavaScript**). Proficient in **Git, Docker, Jenkins, and AWS (EC2, S3, Lambda)**. Experienced in **Agile environments**, test-driven development (**TDD**), and **CI/CD pipelines**. Passionate about writing clean, efficient code and solving real-world problems.

TECHNICAL SKILLS

Languages & Scripting:	Java, Python, SQL, Bash, JSON, YAML
Frontend Technologies:	HTML, CSS, JavaScript, React, Angular, jQuery, AJAX, XML, JSON
Frameworks & Libraries:	Springboot, Hibernate, Django, Flask, FastAPI, Pandas, NumPy, JUnit, Pytest, Jinja2, React
Databases & Cloud:	PostgreSQL, MySQL, MongoDB, SQLite, AWS (EC2, S3, Lambda, RDS, CloudWatch), Azure, Heroku
Tools & DevOps:	GitHub, GitLab/Actions, Docker, Jenkins, Postman, Swagger/OpenAPI, Jupyter Notebook, Linux CLI
Development Practices:	RESTful API Development, Microservices Architecture, CI/CD Pipelines, Agile & Scrum, TDD, OOP, SDLC, Containerization, Logging & Monitoring, JIRA, Confluence

PROFESSIONAL EXPERIENCE

Software Engineer, *HCL Tech*

Jan 2025 – Present | Remote, USA

- Designed and developed microservices-based architectures using Java and Spring Boot to streamline expense reporting, approval workflows, and reimbursement processes, improving system efficiency.
- Built high-performance RESTful APIs with Spring Boot, integrating with internal accounting systems and third-party payment gateways to ensure seamless transaction processing and compliance with financial policies.
- Optimized PostgreSQL performance, implemented Redis caching for frequently accessed data, and wrote efficient SQL queries to reduce report generation times by half.
- Deployed and maintained cloud-native solutions on AWS (EC2, Lambda, RDS, S3), reducing operational costs through serverless automation and auto-scaling for peak expense submission periods.
- Ensured data security & compliance by implementing role-based access control (RBAC), audit logging, and encryption for sensitive financial data.
- Collaborated in Agile sprints, conducted pair programming, and improved team productivity and maintained code quality with JUnit for unit testing and Selenium for end-to-end automation of expense approval workflows.

Software Engineer, *Wipro*

Sept 2022 – Oct 2024 | Hyderabad, India

- Designed and implemented data integration pipelines to automate seamless financial data exchange between ERP, accounting systems, and banking APIs, ensuring real-time transaction reconciliation and excellent data accuracy.
- Developed microservices architecture using FastAPI and Flask for modular financial services, including Payment Processing, Fraud Detection, and Ledger Management, enabling independent scaling and deployment.
- Built reusable data transformation modules in Python to standardize financial data formats (e.g., ISO 20022, SWIFT), reducing manual reconciliation efforts and improving compliance with GAAP/IFRS standards.
- Secured financial APIs with OAuth 2.0, mutual TLS (mTLS), and certificate-based authentication, ensuring compliance with PCI-DSS, SOX, and GDPR regulations.
- Designed RESTful APIs for inter-service communication in financial workflows (e.g., fund transfers, invoice processing), integrated via Kong API Gateway for centralized routing, rate limiting, and audit logging.
- Implemented JWT-based authentication and RBAC to enforce strict access controls for banking admins, auditors, and customers, ensuring least-privilege security across financial operations.
- Optimized MySQL financial databases using SQLAlchemy ORM, indexing strategies, and query tuning to handle high-volume transaction processing with sub-second latency.
- Enhanced system reliability by integrating Sentry for real-time error monitoring and Prometheus/Grafana for financial transaction metrics, reducing production downtime.
- Engineered event-driven microservices using RabbitMQ for asynchronous payment notifications and Docker/Kubernetes for scalable, fault-tolerant deployments in AWS/GCP cloud environments.

EDUCATION

Master of Science; Management Information System

Jan 2024 - Dec 2025

University of Memphis, Memphis, USA

Bachelor of Technology; Computer Science and Engineering

Aug 2018 – Aug 2022

Saveetha School of Engineering, Chennai, India
