

Sayyed Zohair Ahmad

Java Developer

Location: WA | Mobile: (206) 588-6842 | Email: sayyedzohair25@gmail.com

SUMMARY

Java Developer with 3 years of experience in full-stack development, specializing in SDLC methodologies like Agile and Waterfall. Proficient in Java, SQL, Python, C++, JavaScript, and more. Expertise in frameworks such as Spring Boot, React, and Hibernate, with extensive experience in cloud technologies (AWS, Azure), containerization (Docker, Kubernetes), and databases (MySQL, MongoDB). Strong problem-solving abilities, collaboration, and adaptability in dynamic environments.

SKILLS

Methodology: SDLC, Agile, Waterfall

Languages: Java, JavaScript, SQL

Frameworks/Library: Spring MVC, Spring Boot, Microservices, Hibernate, JPA

J2EE Technologies: Servlets, JSP, JDBC

Cloud Technologies: AWS (EC2, IAM, S3)

Application Server: Apache Tomcat, Web Sphere

Databases: MySQL, PostgreSQL, NoSql

Build /Other tools: UML, MS Visio, Maven, Gradle, Jenkins, Junit

EDUCATION

Bachelor in Computer Science in Software Engineering | University of Washington Bothell

EXPERIENCE

ServiceNow, MA | Jan 2024 - Current | Java Developer

- Designed and developed robust backend systems using Java 8, Spring Boot, and Spring MVC, improving system performance by 30% by optimizing code and implementing caching mechanisms.
- Built and integrated RESTful APIs with front-end systems and third-party services, following Agile methodologies to deliver features in 2-week sprints, resulting in a 20% faster time-to-market.
- Optimized database interactions using Hibernate and JPA, reducing query execution time by 20% for MySQL and PostgreSQL databases by indexing tables and rewriting complex queries.
- Implemented Spring Security for secure authentication and authorization, reducing security vulnerabilities by 40% by integrating OAuth2 and JWT-based token authentication.
- Conducted unit and integration testing using JUnit and Mockito, achieving 90%+ code coverage by writing comprehensive test cases and automating test execution.
- Deployed applications on Apache Tomcat and configured CI/CD pipelines using Jenkins and Maven, reducing deployment time by 25% by automating build and deployment processes.
- Collaborated with cross-functional teams to troubleshoot and resolve complex technical issues, improving team productivity by 15% by implementing effective communication and knowledge-sharing practices.

DXC Technology, India | April 2022 – Dec 2023 | Java Developer

- Led the development of microservices architecture using Spring Boot and Docker, improving system scalability and fault tolerance by 35% by breaking down monolithic applications into more minor, independent services.
- Integrated AWS services (EC2 and S3) for cloud-based storage and computing, reducing infrastructure costs by 20% by migrating on-premise applications to the cloud and optimizing resource usage.
- Managed container orchestration using Kubernetes, automating deployment and scaling of 50+ containerized applications by writing custom Helm charts and configuring auto-scaling policies.
- Implemented NoSQL databases (MongoDB and Redis) for caching and real-time data processing, reducing application response time by 30% by caching frequently accessed data and optimizing database queries.
- Designed and optimized database schemas for Elasticsearch, enabling efficient full-text search and improving search performance by 40% by implementing custom analyzers and indexing strategies.
- Developed and maintained Servlets and JSP-based web applications, ensuring seamless user experiences for 10,000+ monthly users by optimizing back-end interactions and reducing page load times.
- Optimized database connectivity using JDBC, reducing query execution time by 25% by implementing connection pooling and optimizing SQL queries.
- Utilized Git and GitHub for version control, improving team collaboration and reducing code conflicts by 30% by enforcing branching strategies and conducting regular code reviews.
- Mentored 5+ junior developers and conducted code reviews, fostering a culture of collaboration and improving code quality by 20% by providing constructive feedback and sharing best practices.
