

Daivik Girish

SOFTWARE DEVELOPER

USA | +1 (201) 349-0101 | Email: daivikgirish15@gmail.com | [LinkedIn](#): daivik-girish-709ab7185/ | [GitHub](#): DaivikGirish

Professional Summary

Results-driven Software Developer with 5+ years of experience in designing, developing, testing, and deploying scalable applications across financial and technological domains. Proficient in Java, Python, C#, JavaScript, React, Angular, Node.js, SQL, NoSQL, AWS, Azure, Docker, Kubernetes, and CI/CD pipelines. Skilled in Agile/Scrum methodologies, building microservices, REST APIs, cloud-native applications, and implementing automation for faster deployments and improved reliability. Adept at collaborating with cross-functional teams to deliver high-quality, secure, and performance-optimized software solutions aligned with business needs.

Technical Skills

- Programming Languages:** Java, Python, C#, JavaScript (ES6+), TypeScript, SQL, PL/SQL, R, Go (basic)
- Frameworks & Libraries:** Spring Boot, Hibernate, .NET Core, Angular, React.js, Node.js, Express.js, Django, Flask
- Databases:** MySQL, PostgreSQL, Oracle, MongoDB, Redis, Cassandra, SQL Server
- Cloud & DevOps:** AWS (EC2, S3, Lambda, RDS, ECS, EKS), Azure App Services, GCP, Docker, Kubernetes, Jenkins, GitHub Actions, Terraform, Ansible
- Web Services & APIs:** RESTful APIs, SOAP, GraphQL, gRPC, OAuth 2.0, JSON, XML, Postman, Swagger
- Testing & Automation:** JUnit, TestNG, Selenium, Cucumber (BDD/TDD), JMeter, Postman, Cypress, PyTest
- Agile & Project Tools:** Agile (Scrum/Kanban), Jira, Confluence, Git/GitHub/GitLab, Bitbucket, ServiceNow
- API Management & Integration:** Postman, Swagger, Apigee, API Gateway, OAuth 2.0, OpenAPI specifications for secure and scalable service integration.
- Monitoring & Observability:** Prometheus, Grafana, ELK/EFK Stack, Splunk, New Relic for real-time application monitoring, logging, and performance optimization.
- Other Skills:** Microservices Architecture, Event-Driven Systems (Kafka, RabbitMQ), CI/CD Pipelines, System Design, Performance Tuning, Secure Coding Practices

Professional Experience

Software Developer, DXC Technology (Internship), USA

Jan 2025 – Present

- Designed and developed enterprise-grade applications using Java, Spring Boot, and Hibernate, implementing scalable microservices architecture that improved system performance and reduced downtime by 30%.
- Built and maintained RESTful APIs and GraphQL services to enable seamless integration with third-party systems, improving data exchange efficiency by 25% across financial platforms and enhancing scalability for future integrations.
- Optimized database operations in PostgreSQL and MongoDB, implementing stored procedures, indexing, and caching strategies that enhanced query performance and reduced latency by 40%.
- Deployed cloud-native applications on AWS (EC2, Lambda, ECS, RDS, S3) and integrated monitoring tools like CloudWatch, improving system reliability and achieving 99.95% uptime SLA.
- Implemented CI/CD pipelines using Jenkins and GitHub Actions to automate build, test, and deployment workflows, reducing release cycles from weekly to daily deployments while improving delivery speed and application stability.
- Collaborated with UI teams to build dynamic web applications using React.js, Angular, and Node.js, improving user experience, reducing page load times by 20%, and enhancing responsiveness across desktop and mobile platforms.
- Wrote unit and integration tests using JUnit, TestNG, and Mockito, achieving 85% code coverage, reducing production defects by 18%, and improving overall application reliability through early defect detection.
- Migrated legacy monolithic applications to a microservices-based architecture using Spring Boot and Docker, significantly improving scalability, maintainability, and enabling faster feature deployments through containerized services.
- Worked closely with business stakeholders to gather requirements, conduct GAP analysis, and translate into functional and technical designs, ensuring alignment with client expectations.
- Contributed to Agile Scrum ceremonies including sprint planning, retrospectives, and daily standups while mentoring junior developers, improving team efficiency, collaboration, and delivery predictability across multiple sprints.

Senior Systems Engineer, Infosys, India

May 2021 – Nov 2023

- Engineered and managed 8+ large-scale datasets and databases using SAP HANA DB to support 4+ interconnected enterprise applications, ensuring scalability and optimized query performance.
- Designed and developed UI components with SAP Fiori and Node.js on SAP CAPM within SAP BTP, improving application usability, enhancing user experience, and reducing development time by 15%.
- Built and maintained backend services in Spring Boot (Java), integrating seamlessly with frontend components via REST APIs and validating transactions with Postman, ensuring 99% API reliability and stable application performance.
- Implemented user authentication and role-based security using SAP XSUAA and deployed applications on SAP Launchpad, strengthening access controls, reducing authentication-related issues by 30%, and improving overall system security.
- Enhanced machine learning models for intelligent product recommendations, improving prediction accuracy by 12%, boosting efficiency scores by 18%, and delivering more relevant insights across enterprise applications to support better decision-making.
- Diagnosed and resolved 32+ small to mid-level bugs, improving overall system stability, reducing recurrence by 20%, and ensuring smoother, more reliable production releases with minimal downtime.
- Increased test coverage by 25% by developing comprehensive JUnit test cases, strengthening overall code quality, reducing post-release defects, and boosting long-term application reliability and maintainability.
- Actively contributed to Agile/Scrum cycles, including sprint planning, backlog refinement, and bi-weekly demos, improving stakeholder alignment and accelerating feature delivery timelines by 10%.

Software Developer, Intex Technologies (Internship), India

July 2019 – April 2021

- Designed, developed, and deployed enterprise web applications using C#, .NET Core, and Angular, enhancing customer self-service, streamlining workflows, and reducing support requests by 15% through improved UI/UX and process automation.
- Built and integrated APIs using REST and SOAP to enable seamless data exchange between internal and third-party systems, automating processes, reducing manual effort by 25%, and ensuring scalable integrations.
- Optimized SQL Server and Oracle databases by implementing indexes, stored procedures, and query tuning, achieving 35% faster data retrieval, improving application responsiveness, and enabling real-time decision-making.
- Developed ETL pipelines and automated workflows using Python and SQL to process large datasets, standardize transformations, and deliver timely, accurate insights to BI dashboards, enabling informed strategic decisions.
- Implemented containerization and DevOps best practices by deploying applications in Docker and orchestrating with Kubernetes, while automating CI/CD pipelines using Jenkins and Ansible, which reduced deployment times by 40%, eliminated manual configuration errors, and ensured reliability across development, testing, and production environments.

Education

Masters | New Jersey Institute of Technology, Newark, NJ, USA

Jan 2024 - May 2025

Bachelor | Visveswaraya Technological University, Karnataka, India

Aug 2016 - Aug 2020
