PROFILE SUMMARY

- Over four years of experience in designing, developing, and delivering client/server applications as a Java Developer.
- Participated in all software development life cycle (SDLC) phases, including system analysis, design, development, debugging, report generation, testing, and documentation.
- Proficient in software development models like Agile (Scrum) and Waterfall.
- Expertise in Spring, Spring Boot, Spring WebFlux, Hibernate, and JavaScript frameworks for developing multi-tier distributed Enterprise Applications.
- Strong experience in Spring Core, Spring AOP, Spring MVC, Spring IOC, Spring Security, Spring Batch, JPA, and Hibernate Frameworks.
- Hands-on experience with Kafka for asynchronous communication among microservices.
- Proficient in RDBMS and SQL queries, including MySQL, Oracle SQL PL/SQL, and SQL Server.
- Experience with REST, Service-Oriented Architecture (SOA), SOAP, WSDL, XML, and Java XML parsers (JAXP).
- Developed, tested, and deployed enterprise applications on Windows and UNIX platforms using IDEs like Eclipse and NetBeans.
- Extensive experience in SQL, PL/SQL programming, stored procedures, and triggers with Oracle, MS SQL, and MySQL.
- Performed unit testing using JUnit and developed applications using Ant and Maven for build automation.
- Hands-on experience with SOA and Web Services architectures – SOAP and REST.
- Developed web client interfaces using JSP, JSP custom tags, Tiles, JSF, Flex, XML, HTML, and JavaScript.
- Expertise in enterprise design patterns, Agile methodology (Scrum), and Test-Driven Development (TDD).
- Worked with application servers like Apache Tomcat, WebLogic, WebSphere, and JBoss.
- Experience in C++ for system-level programming.
- Proficient in database development using Oracle 8i/10g, MySQL, and strong hands-on experience with SQL, PL/SQL.
- Developed Ant and Maven build scripts for compiling and deploying code in mixed Solaris, HP-UX, and Windows environments.

EDUCATION

Bachelors of Science in Computer Science, The University of Texas at Arlington, Arlington, TX

KEY SKILLS

Programming Languages: Java, Python, Kotlin, J2EE, C++, SQL, PL/SQL

Java/J2EE Technologies: Servlets, JSP, JDBC, JMS, Java Beans

Architecture/Framework: Spring Boot, Spring Webflux, Hibernate, MVC Architecture, microservices, Docker

IDE: Eclipse, Microsoft Visual Studio, Net Beans

Databases: MySQL, SQL Server, DB2

Operating Systems: Windows, Linux, UNIX

Web/XML Technologies: HTML, HTML5, CSS, XML

WORK HISTORY

Java/J2EE Developer | June 2024 to Present

Wilcare Dallas Inc | Arlington, TX

Responsibilities:

- Responsible for developing registration modules for institutional investors.
- Developed and maintained robust and scalable applications using Core Java.
- Utilized various J2EE Design Patterns to develop business modules based on required functionality.
- Created the service layer for the application, including validation and business logic implementation.
- Experience with transactions and transaction management in Spring Boot.
- Collaborated with cross-functional teams to analyze requirements and design efficient solutions using Core Java best practices.
- Built the presentation tier of the application entirely on the Struts framework.
- Implemented Kafka producers and consumers using Kafka client libraries in Java, ensuring reliable and efficient data transmission.
- Integrated third-party libraries and modules in Angular 12 applications to enhance functionality and improve development efficiency.
- Developed Enterprise JavaBeans (EJBs) like Session & Entity Beans for multiple application modules.
- Adapted applications to diverse network configurations, ensuring compatibility and optimal performance in IPv4 and IPv6 environments.
- Integrated MongoDB into backend systems for efficient storage and retrieval of structured and unstructured data, utilizing the official MongoDB Java driver.

Environment: Java 11, WebLogic portal 8.1, JSP, JSTL, Ajax, CSS, Struts, Hibernate, ANT, Webservices, Eclipse IDE, Oracle, WebLogic, Webservices, HP-Unix, XML, XSLT, XPath,

Java Developer | Sept 2022 to May 2024

Comerica Bank | Dallas, TX

Responsibilities:

- Responsible for re-architecting project structure and APIs to improve maintainability and performance.
- Implemented API documentation using Swagger for better API visibility and usability.
- Redesigned the exception handling mechanism, ensuring more robust error management.
- Actively involved in project planning and forecasting using Scrum methodology.
- Resolved application-level threading issues to enhance application performance and reliability.
- Designed and developed an end-to-end performance logging module using Aspect-Oriented Programming (AOP).
- Implemented custom annotations for enhanced security measures within the application.
- Identified and documented technical debt issues, prioritizing them for resolution in sprints.
- Played a key role in troubleshooting and resolving issues in retail software, ensuring smooth system operation.
- Designed and developed RESTful APIs using Java, enabling efficient communication with an Angular 9 front-end.
- Worked closely with business analysts to understand business rules and implement required functionalities.
- Implemented state management in Angular 9 applications, optimizing performance and user experience.
- Handled deployment of updated and new applications across multiple system environments, providing clear deployment instructions.
- Integrated Kafka with microservices architecture, enabling asynchronous communication, improving system scalability and resilience.
- Analyzed business requirements for new functionalities and assessed necessary changes in existing modules to align with business needs.

Environment: Java 1.8, Spring REST Services, Spring boot, Spring security, Maven, IntelliJ, MySQL, GIT, Swagger, angular JS, Jenkins, Angular 9, Node.js, MongoDB, Kafka, Selenium

Jr Java Developer | Nov 2020 to Aug 2022

Axxess Technology Solution | Dallas, TX

Responsibilities:

- Contributed to multiple stages of the Software Development Life Cycle (SDLC), including requirements gathering, development, testing, and deployment.
- Extensive experience in Java/J2EE environments, developing web and distributed applications using JDBC, JSP, Servlets, Hibernate, XML, Struts, and Web Services.
- Applied expertise in Spring's Inversion of Control (IOC), Spring MVC, and Spring integration with Hibernate and Struts for web application development.
- Hands-on experience with application servers such as WebLogic, JBoss, and Tomcat.
- Worked extensively with Eclipse IDE and managed source code using Git and CVS for version control.
- Utilized Spring ORM to integrate Spring Framework with Hibernate for effective persistence management.
- Integrated JPA persistence with Hibernate, managing the state of Drools knowledge sessions through Spring Framework integration.

- Installed and configured JBoss/Drools server with MySQL/Oracle persistence, efficiently extracting rule data from databases and decision tables.
- Designed and developed Java Business Object Model (BOM) for implementing complex business logic.

Environment: Java, J2EE, Spring, Spring Boot, MySQL, JSP, HTML, CSS, JQuery, XML, Servlet, JDBC, JPA, JUnit, Git, JIRA
