PROFESSIONAL SUMMARY

- **Around 8 years of experience** as a **Senior Java Full Stack Developer** in designing, developing, and deploying enterprise applications.
- Expertise in **gathering requirements, analysis, object-oriented design, development, implementation, and maintenance** using **Java, J2EE, and cloud technologies**.
- Strong hands-on experience in developing **UI and professional web applications** using **HTML5/XHTML, CSS3/SCSS, JavaScript, TypeScript, Bootstrap, JSP, DOM, jQuery, JSON, AJAX, Node.js**.
- Extensive experience in **modern frontend frameworks** like **React.js, Redux, React Router, Angular 2–14, Vue.js, Vuex, Vue Router, Nuxt.js, and React Native**.
- Developed **Single Page Applications (SPA)** with dynamic forms, tables, dashboards, and reusable components.
- Hands-on experience with **Angular CLI, advanced Angular services, modules, directives, and custom pipes**.
- Built **event-driven and asynchronous frontend applications** using **RxJS, NgRx, and Redux**.
- Expertise in **JavaScript ES6+ standards and TypeScript**, ensuring modular, maintainable, and scalable code.
- Strong knowledge of **Java core concepts**: OOPS, collections, multithreading, exception handling, serialization, and functional programming with Streams, Lambdas, Optional, and Completable Future.
- Developed **enterprise applications using J2EE technologies**: JSP, Servlets, JSF, JSTL, EJB, JDBC, JNDI, JMS, POJO.
- Extensive experience with **design patterns**: MVC, Front Controller, Singleton, Factory, Observer, Decorator, Adapter, Iterator, and Facade.
- Hands-on experience in **Spring Framework modules**: Spring Core, Spring MVC, Spring Boot, Spring Security, Spring Data JPA, Spring AOP, Spring Transaction, Spring Cloud.
- Developed **RESTful APIs and SOAP web services**, including **Jersey and Apache Axis implementations**, and tested with **Postman and SOAP UI**.
- Implemented **microservices architecture** using **Spring Boot**, asynchronous endpoints, service orchestration, and **Swagger/OpenAPI documentation**.
- Developed **frontend authentication and authorization** using **JWT, OAuth2, and React Router v4+** for token-based user sessions.
- Hands-on experience with **CI/CD pipelines** using **Jenkins, GitLab CI, GitHub Actions, Azure DevOps**, and build tools **Maven, Gradle, ANT**.
- Developed and deployed **Docker container clusters**, orchestrated with **Kubernetes**, including master and node configuration, Helm, and Docker Compose.
- Implemented **cloud infrastructure and services** in **AWS** (EC2, S3, Lambda, API Gateway, RDS, DynamoDB, CloudFormation, SNS/SQS), **Azure**, and **GCP** (Kubernetes Engine, Compute Engine, Cloud SQL, Big Query, Pub/Sub, Dataflow).
- Experienced in **database management** with **MySQL, PostgreSQL, Oracle, and NoSQL databases** like **MongoDB, Cassandra**, including query optimization, indexing, stored procedures, and schema design.
- Implemented **Redis caching** for improved application performance and response times.
- Hands-on experience with **messaging & streaming technologies**: Kafka (Producer/Consumer, topics, publish-subscribe) and RabbitMQ (AMQP messaging).
- Designed and implemented **unit and integration testing** with **JUnit 5, Mockito, Power Mockito**, as well as **frontend testing** with **Jasmine, Karma, Jest, Protractor, Enzyme**.
- Worked with **log management and monitoring** using **Log4j, ELK Stack, Prometheus, Grafana**.
- Hands-on experience in **version control and collaboration** using **Git, GitHub, GitLab, Bitbucket, and SVN**, including pull requests, code reviews, and branching strategies.

- Implemented **batch processing and multithreading** for large-scale enterprise applications.
- Experienced in **API testing, scenario-based testing, and performance testing** using Postman, Swagger, and JMeter.
- Knowledge in **SaaS software configuration**, including dashboards, branding, reporting, data feeds, and SAML-based authentication.
- Hands-on experience in **cloud database migrations, RDS setup, and Terraform scripting** for infrastructure provisioning.
- Expertise in **mentoring junior developers, implementing coding best practices**, and delivering enterprise-grade solutions with high availability and scalability.

TECHNICAL SKILLS:

Web & Frontend Technologies	HTML 4/5, CSS3, AJAX, DOM, RWD, JavaScript, TypeScript, JSON, XML, AngularJS, Angular 2–10, React.js, Redux, Vue.js, Node.js, Express.js, EXT.js, Backbone.js, Require.js, jQuery, Bootstrap.
Java & Backend Technologies	Core Java, Servlets, JSP, Swing, Spring Core, Spring Boot/MVC, Spring Security, Spring Data JPA, Spring Cloud, Hibernate, Microservices architecture, RESTful and SOAP Web Services, Jersey, Axis2.
Database/RDBMS and ORM	MySQL, PostgreSQL, MongoDB, Redis, Cassandra, SQL & PL/SQL, stored procedures, indexing, schema design, query optimization, AWS SDK (Boto3) for database operations, NumPy for data handling
DevOps, Containers & CI/CD	Docker, Kubernetes, Helm, Docker Compose, Jenkins, GitLab CI, GitHub Actions, Maven, Gradle, ANT, Nexus, Git, GitHub, Bitbucket, SVN
Testing & Quality Tools	JUnit, Mockito, Power Mockito, Jasmine, Karma, Jest, Protractor, Enzyme, Log4j, Grafana, Prometheus, Kibana, Nagios
Web & Application Servers	Apache Tomcat, WebSphere, WebLogic, JBoss, Glass Fish, Nginx.
API Documentation	Swagger/Open API
Languages & Scripting	Java, JavaScript, Python, Bash/Shell scripting, Ruby.
Project & Issue Management Tools	Jira, Bugzilla, Quality Center.

EDUCATION:

- Completed MS in Information Technology Management, St Francis College, USA.
- Completed Bachelor of Engineering in Computer Science and Engineering, Jawaharlal Nehru Technological University, Kakinada, INDIA.

PROFESSIONAL EXPERIENCE:

Client: Medtronic, San Antonio, TX.

Oct 2024 – Present

Sr. Java Full Stack Developer

Responsibilities:

- Developed interactive and responsive **React front-end** for patient device data tracking, implementing **modular, reusable UI components**, grids, forms, and charts.
- Designed and implemented **Redux state management** with asynchronous API handling via Redux Thunk, reducing redundant API calls by **30%**.
- Integrated **React Router v6** for SPA navigation, with **role-based route guards** and **lazy loading**, improving security and performance.
- Built **Node.js + Express middleware** for API aggregation, authentication, logging, and request validation to improve frontend-backend communication.
- Developed **Spring Boot microservices** for patient records, telemetry ingestion, reporting, and analytics, using **transaction management** and exception handling.

- Secured backend services with **Spring Security & JWT**, implementing token refresh, role-based permissions, and API-level authorization.
- Implemented **Kafka producers and consumers** for asynchronous event-driven workflows, with **retry logic, DLQs, and monitoring** to ensure data reliability.
- Designed **MongoDB schemas** for device event logs and configuration data, optimizing document storage and queries.
- Created **PostgreSQL schemas** for user management, roles, audit logs, and reporting, including indexes, triggers, and stored procedures.
- Integrated **Redis caching** for frequently accessed API responses, improving performance and reducing database load by 25%.
- Developed **asynchronous REST endpoints** using Spring Async and Completable Future for long-running operations.
- Implemented **microservice orchestration** with Spring Cloud, Eureka service registry, and Hystrix for fault tolerance and load balancing.
- Optimized **API performance**, achieving **40% faster response times** through caching, query tuning, and asynchronous processing.
- Migrated legacy **SOAP services to RESTful APIs**, enabling JSON-based communication and improved maintainability.
- Wrote **unit and integration tests** using JUnit 5, Mockito, Power Mockito, and Test containers, ensuring high test coverage and system reliability.
- Developed **core Java modules** with Lambdas, Streams, Optionals, and functional interfaces for efficient collection processing.
- Implemented **concurrent processing and multithreading** in Spring Boot services to handle high-volume telemetry ingestion and batch jobs.
- Designed DAO and repository layers with **Spring Data JPA and Hibernate** for MongoDB and PostgreSQL integration.
- Automated **CI/CD pipelines** with Jenkins, including code builds, testing, SonarQube analysis, Docker image creation, and Kubernetes deployment.
- Containerized applications with **Docker** and deployed to **AWS EKS**, configuring Config Maps, Secrets, and Horizontal Pod Auto scalers.
- Monitored production services using **Prometheus + Grafana dashboards** and ELK logging for troubleshooting and analytics.
- Created **Swagger/Open API documentation** for all REST APIs to ensure consistent frontend-backend contracts.
- Conducted **dynamic query building** using Spring Data JPA Criteria API for complex filtering and reporting dashboards.
- Mentored junior developers on **React, Redux, and Spring Boot best practices**, improving team productivity and code quality.
- Contributed to **API versioning strategy** and backward compatibility for microservices, simplifying maintenance and onboarding.

Environment: React, Redux, React Router, Node.js, Express, Spring Boot, Java 11, MongoDB, PostgreSQL, REST APIs, JWT, Kafka, Docker, Jenkins, AWS EKS, Kubernetes, Prometheus, Grafana, ELK, JUnit 5, Mockito, Jest

Client: Entro Labs IT Solutions, Vijayawada, India.

July 2020 – Nov 2023

Full Stack/Systems Engineer

Responsibilities:

- Developed **Angular-based SPAs** with modular and reusable components for employee onboarding, leave management, payroll, and performance evaluation modules.
- Implemented **NgRx state management**, including actions, reducers, selectors, and effects, to manage application state efficiently.
- Built dynamic **Angular forms, validations, custom directives, pipes**, and multi-step wizards for HR and payroll workflows.

- Implemented **lazy-loaded modules, route guards, and role-based screens** to optimize application performance and secure sensitive data.
- Integrated **REST APIs** from Spring Boot microservices using Angular Http Client with JWT token-based authentication and interceptors.
- Developed **Spring Boot microservices** for employee management, leave approvals, payroll processing, and performance scoring.
- Designed **microservice architecture** using Spring Boot, including domain-driven design, layered architecture, and service-to-service communication.
- Implemented **Spring Security + JWT** for authentication and authorization across all microservices.
- Built **asynchronous workflows** using RabbitMQ/Kafka for employee notifications, payroll processing triggers, and approval notifications.
- Designed **PostgreSQL database schemas** for employee records, leave, payroll, and audit logs; implemented indexes, views, triggers, and stored procedures for performance.
- Implemented **Redis caching** to store frequently accessed HR data, reducing backend load and improving response times.
- Applied **Java 11/17 features** (Streams, Lambdas, Optional, Local Date/Time API) to implement service layer logic efficiently.
- Developed **multi-threaded services** for batch payroll processing, leave approval workflows, and reporting, ensuring high throughput.
- Designed **REST API contracts**, Swagger documentation, and versioning strategy to maintain backward compatibility across services.
- Implemented **unit tests using JUnit 5 and Mockito** for service and repository layers; created **integration tests** to validate API flows.
- Developed **end-to-end testing** for Angular components and services using **Jasmine & Karma**, ensuring cross-browser and functionality reliability.
- Containerized microservices and Angular front-end using **Docker**, and orchestrated deployments using **Kubernetes** with Config Maps, Secrets, HPA, and rolling updates.
- Automated **CI/CD pipelines with Jenkins**, including builds, tests, SonarQube code quality scans, Docker image creation, and production deployments.
- Monitored microservices using **Prometheus + Grafana** for performance metrics and applied **centralized logging via ELK stack** for debugging and analysis.
- Mentored junior developers on **Angular best practices, RxJS patterns, Spring Boot microservices design, and enterprise DevOps processes**, improving team efficiency and code quality.

Environment: Angular 14+, TypeScript, RxJS, NgRx, HTML5, SCSS, Bootstrap, Spring Boot, Java 11/17, REST APIs, JWT, PostgreSQL, Redis, RabbitMQ/Kafka, Docker, Jenkins, Kubernetes, Jasmine, Karma, JUnit, Mockito

Client: Capita India Pvt Ltd, Hyderabad, India

June 2019 - June 2020

Associate Software Engineer (Java Developer)

Responsibilities:

- Developed **Vue.js front-end SPAs** with reusable components, dynamic forms, tables, charts, and dashboards for employee and workflow management.
- Implemented **Vuex store** for state management and **Vue Router** for secure, role-based routing and lazy-loaded modules.
- Built **custom Vue directives, mixins, and filters** to standardize UI behaviours across multiple modules.
- Integrated **RESTful APIs** with JWT-based authentication and centralized error handling for seamless backend communication.
- Developed **Spring Boot microservices** for employee profiles, leave management, task workflows, and reporting.
- Designed **domain-driven microservices architecture** using layered design patterns: controller, service, repository, and domain layers.
- Implemented **Spring Security + JWT** for secure authentication, authorization, and role-based access across all services.

- Migrated legacy SOAP web services to **RESTful APIs**, enabling JSON-based responses and improved maintainability.
- Developed **asynchronous workflows using RabbitMQ/Kafka** for task notifications, workflow approvals, and audit logging.
- Designed **PostgreSQL schemas** for employee, task, and workflow management; implemented indexes, triggers, stored procedures, and views for optimized queries.
- Managed **MongoDB collections** for storing semi-structured employee and workflow logs, implementing indexes, replication, and schema design best practices.
- Applied **Java 8 features** (Streams, Lambdas, Optional) for collection operations and functional programming in service layers.
- Implemented **concurrent processing** for workflow engine, batch approvals, and asynchronous notifications.
- Created **unit tests using JUnit 5 and Mockito** for service and repository layers; developed integration tests for end-to-end workflow validation.
- Documented **REST APIs using Swagger/Open API**, ensuring clear contracts for frontend and external integration.
- Built **Docker images** for front-end and backend services; orchestrated deployments with Jenkins pipelines for CI/CD automation.
- Configured **Kubernetes clusters** with Config Maps, Secrets, and rolling updates for microservice deployment and scaling.
- Monitored system metrics using **Prometheus + Grafana** and centralized logs using **ELK stack** for easier troubleshooting.
- Implemented **event-driven microservices architecture**, reducing coupling and increasing reliability of task workflows and notifications.
- Optimized **REST API performance**, query efficiency, and asynchronous processing, reducing average response time by 35%.
- Mentored junior developers on **Vue.js patterns, Vuex state management, Spring Boot microservices, and enterprise DevOps practices**.
- Collaborated with business analysts and QA teams to implement **feature enhancements, bug fixes, and code refactoring** to improve system maintainability.
- Enhanced user experience and front-end responsiveness by implementing **dynamic charts, filtered tables, pagination, and form validations** in Vue.js.

Environment: Vue.js, Vuex, Vue Router, Java 8/11, Spring Boot, Spring MVC, REST/SOAP APIs, PostgreSQL, MongoDB, RabbitMQ/Kafka, Docker, Jenkins, JUnit 5, Mockito, Swagger/OpenAPI

Client: Bajaj Finserv, Hyderabad, India

Sept 2017 - May 2019

Software Engineer

Responsibilities:

- Developed and maintained **dynamic JSP-based UI pages** for loan application, approval, and customer service workflows.
- Enhanced client-side functionality using **JavaScript, jQuery, and Bootstrap**, implementing form validations, dynamic tables, and charts.
- Followed **MVC design pattern (Struts/Spring MVC)** for separation of concerns between presentation, business, and data layers.
- Developed **Spring MVC controllers and services** for loan processing, customer account management, and transaction history.
- Implemented **business logic modules in core Java**, using collections, multithreading, and object-oriented principles.
- Developed **SOAP-based web services** for third-party integration and internal communication; migrated some modules to **RESTful services**.
- Implemented **Hibernate ORM and Spring JDBC** for CRUD operations, transaction management, and batch processing.

- Designed and optimized **MySQL/PostgreSQL schemas**, indexes, triggers, views, and stored procedures for high-volume transactional processing.
- Implemented **multithreading and parallel processing** for batch jobs, report generation, and real-time loan approval workflows.
- Developed **Java-based REST APIs** to expose loan and customer data for internal dashboards and reporting systems.
- Integrated **SOAP/REST APIs with JSON/XML parsing** for seamless communication between front-end and backend services.
- Designed **error-handling and exception management** strategies across services using Spring AOP and custom exception handlers.
- Implemented **Spring Security** to secure sensitive customer and financial data, including role-based access control.
- Developed **audit logging, reporting modules, and exception tracking** for critical financial transactions.
- Built **unit tests using JUnit** for service and DAO layers; used **Mockito for mocking dependencies** to ensure reliable unit testing.
- Used **Gradle for project builds**, dependency management, and artifact versioning; maintained code repository with **SVN**.
- Configured applications on **Tomcat and WebSphere servers**, handling environment configurations, deployment scripts, and production troubleshooting.
- Developed **batch processes** for loan repayment schedules, interest calculation, and penalty management using scheduled jobs.
- Assisted in **migration of legacy systems to Spring Boot microservices**, designing modular and maintainable backend services.
- Optimized **SQL queries and database performance**, reducing execution time for critical reports by 25%.
- Implemented **role-based dashboards** for customer service and loan management using JSP and Bootstrap.
- Created **dynamic reporting and analytics** for internal operations using Java and SQL, reducing manual report generation time.
- Collaborated with QA and business teams to **fix bugs, enhance features, and refactor legacy code** for better performance.
- Mentored junior developers on **core Java, Spring MVC, Hibernate, and best practices** for enterprise application development.
- Ensured **compliance with security and financial regulations** while developing enterprise financial applications, maintaining audit trails and secure transaction flows.

Environment: Java 8, J2EE, JSP, HTML5, CSS3, JavaScript, jQuery, Bootstrap, Spring MVC, Spring Boot (basic), Hibernate, JDBC, SOAP/REST APIs, MySQL/PostgreSQL, JUnit, Gradle, SVN, Tomcat/WebSphere.
