

Shahinur Islam

Senior Software Engineer | Tukwila, WA, US

SUMMARY

Results-driven Senior Software Engineer with 10+ years of experience designing and developing scalable cloud-native, real-time communication, analytics, and customer engagement platforms. Expertise in Java, Python, C/C++, JavaScript/TypeScript, and modern frameworks. Skilled in optimizing services for performance, availability, and scalability on AWS, with proven experience leading high-impact projects in contact center, collaborative tools, and analytics services.

TECHNICAL SKILLS

- Programming & Frameworks: Java, Python, JavaScript, TypeScript, Spring Boot, Express.js, Django, Flask, C, C++
- Architecture & Design: Microservices, Event-Driven Architecture, Serverless, MVC, RESTful APIs, WebSockets
- Cloud & Infrastructure: AWS (EC2, Lambda, S3, DynamoDB, CloudWatch, ELB), Docker, Kubernetes, Jenkins, CI/CD
- Data & Messaging: MySQL, PostgreSQL, MongoDB, DynamoDB, Elasticsearch, Redis, Kinesis
- Payments & CRM: Payment Gateway Integration, Customer Analytics, Real-Time Support Systems
- APIs & Integrations: REST APIs, Webhooks, OAuth 2.0, JWT, MFA
- Frontend Engineering: React, Angular, Vue, TypeScript, WebRTC, Responsive UI/UX
- Testing & Quality Engineering: JUnit, Selenium, Monitoring & Logging, Load Testing
- Security & Compliance: SQL Injection Prevention, XSS, CSRF, Secure Coding Practices
- Developer Tools & Collaboration: Git, JIRA, Confluence, Agile/Scrum

PROFESSIONAL EXPERIENCE

Lead / Senior Full Stack Engineer – NBCUniversal, 06/2022 - 08/2025

- Designed and implemented a real-time chat and video integration service for NBC's customer support platform, using Java, Spring Boot, WebSockets, and RESTful APIs to enable seamless communication between customers and agents.
- Developed a co-browse (collaborative browsing) solution using React, WebRTC, and secure session tokens (JWT/OAuth) to allow agents and customers to securely navigate web pages together, increasing customer satisfaction by 30%.
- Built real-time analytics dashboards using Python, Flask, and Elasticsearch to provide insights into service levels, wait times, and call/chat volumes, reducing operational costs by 20%.
- Migrated critical microservices to AWS leveraging EC2, Lambda, S3, CloudWatch, and DynamoDB, resulting in 40% improvement in scalability and performance.
- Enhanced security posture implementing MFA, SQL injection prevention, and XSS/CSRF protection across all customer-facing services.
- Optimized backend performance with caching (Redis), load balancing, and monitoring/logging, achieving 99.99% uptime.
- Led troubleshooting and resolution of customer tickets, reducing average response time by 25%.
- Collaborated cross-functionally with product and QA teams, applying Agile/Scrum practices to deliver new features 15% faster.

Lead Full Stack Engineer – Commerce.AI, 01/2020 – 06/2022

- Spearheaded development of a multi-channel customer feedback analytics system with Java, Python, and Spring Boot integrating with major e-commerce platforms via RESTful APIs and Webhooks, improving actionable insights generation by 35%.
- Architected and deployed real-time data ingestion pipelines on AWS (Kinesis, Lambda, S3) and stored data in MongoDB and Elasticsearch for fast querying and analytics.

- Built role-based authentication and secure API gateway using JWT, OAuth 2.0, and best practices for CSRF/XSS prevention.
- Developed interactive dashboards using React and TypeScript, enabling real-time visualization of product sentiment and customer trends.
- Improved system performance with caching (Redis) and load balancing (AWS ELB), cutting data retrieval latency by 40%.
- Led a team of 5 engineers in adopting CI/CD pipelines with Jenkins, Docker, Kubernetes, accelerating deployments.

Founding Full Stack Engineer – Commerce.AI, 11/2016 – 01/2020

- Designed and developed the initial AI-driven analytics platform from scratch using Python, Django, and PostgreSQL, processing millions of data points daily.
- Integrated multiple third-party APIs via RESTful APIs and Webhooks, expanding the product's coverage by 300%.
- Implemented full-text search with Elasticsearch, improving search response times by 50%.
- Deployed services on AWS, ensuring high availability and horizontal scaling using EC2, Auto Scaling Groups, and CloudWatch.
- Established secure coding standards (SQL injection prevention, XSS/CSRF) across the engineering team.
- Built a modular front-end with Angular for customer dashboards enabling real-time insights and reporting.
- Mentored junior developers and introduced Agile practices, reducing release cycles by 25%.

Full Stack Developer – IBM, 05/2015 – 06/2016

- Developed enterprise customer support tools using Java, Spring Boot, and Angular, integrating with internal systems via REST APIs.
- Built and maintained PostgreSQL and MongoDB databases, optimizing queries for large datasets.
- Enhanced security by implementing OAuth 2.0, MFA, and input validation for all user interfaces.
- Designed performance dashboards with Python Flask and Elasticsearch, providing key metrics to stakeholders.
- Collaborated with cross-functional teams using Git, JIRA, and Confluence under Agile methodology.

Full Stack Developer – Walmart, 07/2014 – 03/2015

- Built and maintained e-commerce modules using Java, Spring, and JavaScript, integrating payment gateways via RESTful APIs.
- Implemented real-time inventory tracking using MongoDB and Redis, improving accuracy by 20%.
- Created secure login systems with JWT and best practices for XSS/CSRF prevention.
- Developed customer-facing UI components with AngularJS, increasing user engagement by 15%.
- Automated unit and integration tests with JUnit and Selenium, reducing post-release defects by 30%.

EDUCATIONAL BACKGROUND

Bachelor's Degree in Computer Science, **Highline College**

Master's Degree in Computer Science, **University of Cumberland**
